Russey, town of France, in the department of Doubs, 34 ms. E. by S. of Besancon.

Russia, vast empire, partly in Asia, and partly in Europe; bounded on the N. by the Frozen Ocean, E. by the Pacific Ocean, S. by Great Tartary, the Caspian Sea, Persia, Turkey in Asia, and the Black Sea, and W. by Turkey in Europe, Poland, the Baltic Sea, and Sweden. There were three countries that had the name of Russia; namely, Red Russia, which formed the S. part of Poland; White Russia, which comprehended the E. part of Lithuania, and Black Russia, which included the governments of Kaluga, Moscow, Oula, Rezan, Volodimir, and Yaroslaf; and hence his imperial majesty takes the title of emperor of all the Russias.

A country of such vast extent must lie in different climates, and the soil and products must be different. The most fertile part is near the frontiers of Poland; inasmuch that the inhabitants are able to supply their neighbours with corn. The N. part is not only colder, but very marshy, and overrun with forests, inhabited chiefly by wild beasts. The country affords a variety of commodities, which being of great use to foreigners, produce a considerable annual balance of trade in favour of Russia. The home commodities are chiefly sabies, black furs, the skins of black and white foxes, ermines, hyznas, lynxes, bears, panthers, wolves, martins, white hares, red and black juchte, or Russian leather, which for colour, smell, and softness, is not equalled in the world; copper,

iron, talc, tallow, wax, honey, potash, tar, linseed and train-oil, castor, isinglass, hemp, flax, thread, sail-cloth, calimanco, Siberian musk, soap, feathers, timber, &c. To these commodities may also be added, almost all the merchandise of China, India, Persia, Turkey, and some European countries. This extensive empire was divided by the empress Catharine II. into 41 governments, namely, Petersburg, Olonetz, Wiburg, Revel, Riga, Pskof, Novogorod, Tver, Smolensko, Polotsk, Mohilef, Orel, Kaluga, Moscow, Tula, Rezan, Volodimir, Yaroslav, Volhoda, Archangel, Kostroma, Nishnei-Novogorod, Kasan, Simbrisk, Penza, Tambof, Voronetz, Kurst, Novogorod, Severskoi, Tchernigof, Kiof, Kharkof, Catharienslaf, Caucasus, Saratof, Ufa, Viatic, Perm, Tobolsk, Kolyvan, and Irkutsk. Since the reign of Catharine II. Finland, Georgia, Shirvan, Daghestan, Imarette, and other countries have been added to Russia. The number of governments was recently 53. A considerable number of the Russians profess the Mahomedan religion, and a greater number are still pagans. The inhabitants of the Swedish provinces are Lutherans. There are many convents for both sexes, but it has been wisely ordained, that no male can enter into a monastic life before he is 30 years of age; and that no female can take the veil till she is 50, and even then not without the license of the holy synod. The inhabitants in general are robust, well shaped, and of pretty good complexion. In 1724, the first university was founded that ever was in Russia; and there is now an academy of sciences at St. Petersburg, supplied with eminent professors. The rising generation are modernizing their antic vestments: the stiff embroidered napkin is supplanted by one of flowing silk, the jacket and petticoat are of muslin, or other fine stuffs; and the plaid is exchanged for a silk or satin cloak, in the cold season lined with fur. The richer class of females wear velvet boots. The dress of the higher ranks is after the French and English fashions. The principal rivers are the Dnieper, Volga, Don, Duna, or Dwina, and Oby. The sovereigns of Russia, are absolute. They were formerly called Grand Dukes, which is still the title of the heir apparent. They afterwards assumed the title of *czar*, and, in the sequel, that of emperor. The natives pronounce the word *czar*, like *tsar*, or *gzar*, and this, by corruption, from *Cæsar*, from some fancied relation to the Roman emperors, on account of which they also bear the eagle as a symbol of their empire. The first who bore the title of *czar*, was Basil, son of John Basilides, who freed his country from its subjection to the Tartars, about the year 1470. The title of *Emperor* was first assumed by Peter I. who, by his illustrious actions justly acquired the surname of Great. He died in 1725, and perhaps no country ever exhibited, in so short a time, the wonders that may be effected by the genius and exertions of one man.

Peter the great, at his accession to the throne, found his subjects of all ranks involved in the grossest ignorance and barbarism; his numerous armies ferocious and undisciplined; and he had neither merchant ships nor men of war; which added to the remoteness of her situation,

rendered the influence of Russia in the politics of Europe of little consideration. Peter civilized his barbarous subjects, disciplined his armies, built cities and fortresses, and created a navy. These national improvements have been continued since his time, and Russia now holds a rank among the nations of the world, of which human foresight, at the commencement of the eighteenth century, could have formed no conception. In 1819, the army amounted to 778,000 men, and the fleet, to 30 sail of the line, 20 frigates, 15 sloops and 200 galleys, with between 30,000, and 40,000 disposable seamen.

The principal seaports of the empire are in Europe, Archangel at the mouth of the Northern Dwina. Cronstadt, Revel, and Riga, in the Baltic, and Sevastopol and Odessa in the Black Sea. In Asia, Astacan near the mouth of the Volga, Ochotsk in the sea of Ochotsk, St. Peter and Paul in Kamschatka; with some forts and factories in America.

The empire now extends to the river Tornea, on the side of Sweden; towards European Turkey to the Pruth and Danube. Between the Black and Caspian Seas, to the Kur and Bathus rivers. In this quarter, Russia now possesses, on the Black Sea, Mingrelia and Imarette, wrested from Turkey, and Georgia, Shirvan, and Daghestan from Persia. In Asia, the limits of Russia are vaguely defined.

The whole empire is now subdivided into upwards of 50 governments, extending over 8,000,000 sqms. with a population exceeding 50,000,000. All religious opinions are tolerated, and more than half the religious denominations of the globe actually exist in this empire. The most numerous and ruling profession is, however, that of the Greek church, amounting to near 44,000,000. The Catholics are estimated at 5,500,000; Lutherans 2,500,000; Mahometans 3,000,000; Jews 1,000,000, &c.

Like every other object of human pursuit in this gigantic empire, literature is making a progress, of which the inhabitants of other countries have but very inadequate ideas. In brief, if we can form any safe anticipation of the future from the past, we may consider the greatness of this colossal political mass, as only in embryo. It is a singular, and perhaps a solitary fact, that whilst the real strength of Russia was daily augmenting, that nearly a century has now passed since it was ruled by a man of military ambition and genius. A circumstance alone wanting to prostrate the other governments of Europe and Asia in broken and scattered fragments. The government, as to internal police and external policy, is a despotism, controlled and directed by the force of public opinion and a most powerful aristocracy. The following extract, from the *Revue Encyclopædique*, contains, in my opinion, the best brief commentary, on Russian history and policy, I ever had the good fortune to peruse.

"That which merits the deepest attention in the policy of the Russian government, is exhibited in the art of assimilating conquered nations with the empire. Since the times of Rome, whose laws seem to have been planned for the conquest of the world, no country has been constituted, like Russia, for the extension and the preservation of its acquisitions. Russia, like

home, having perceived it necessary to form her empire of a crowd of nations, differing in religion, manners, and language, has established a rule allowing to each all those things which are held dearer than political existence. Thus all religions are equally tolerated;—nay more, they are equally protected. Their exercise is public and peaceable, even in those parts of the empire inhabited by people of different faiths. Each religion has its own temples, altars, and ministers. In Petersburg, for example, are erected places of worship for Greeks, Jews, Roman Catholics, and Protestants in all their varieties of Lutherans, Calvinists, &c. In the southern provinces, Islamism is freely professed by those who obeyed the laws of Mahomet before they were reduced to the Russian government. In the East, there are still idolaters; and the government does not persecute their idolatry, well knowing that, in the course of time by the progress of improvement, men will rise of themselves to a purer belief; to a system better fitted to our nature, and less opposed to the majesty of the Creator.

Russia never attempts, by violent measures, to make conquered nations forget the language of their ancestors; that intellectual inheritance, with which are always connected so many delightful recollections and hereditary virtues; but the government trusts to the insensible, but efficacious operation of those relative circumstances which render it for the interest of every man to learn the language of his conqueror, particularly when that conqueror is advancing, with bold strides, along the path of civilization. With these circumstances also, are combined all those which flow from the intercourse of men drawn from different nations, and assembled in the same camps under the same standards; and finally, all the motives of ambition, and the hope of private or public fortune, which, sooner or later, induce the conquered to acquire and to employ alone the language of the conqueror.

It is farther permitted to every people to preserve its own customs and manners. The Tartars are allowed to fight, as they have done ever since the times of the Parthians and Scythians; the government having contented itself with forming chosen bodies of this irregular cavalry, to place them in the ranks of the Imperial guard, to offer them as a model to the barbarous bands which by degrees have learnt all that was necessary to increase their force in discipline and exercise. Already 40,000 Cossacs on the borders of the Don and Danube, are organised into regular mounted lancers, and other light armed troops, with well mounted and well managed light artillery. This immense body of cavalry, ready at the first signal to march in a body, lives encamped in a territory which furnishes them with the necessaries of subsistence.

Military enthusiasm is the ruling passion among these tribes, who have heretofore never known any other path to renown than that of battle. When the French army had penetrated into the interior of Russia, in 1812, this body of Tartar cavalry rose like one man, took up their line of march in a terrible winter, hungry for their prey, and pursued without pity the victims of a devouring climate. "Companions!"

they would cry to each other, enraged at the valour of our soldiers, even in the midst of their misery and nakedness; "Companions, what a shame it will be to us, if we leave these skeletons to rise from their grave and escape us!" And so saying, they would throw themselves upon the remains of our phalanxes with redoubled fury. This is the support which Russia may rely upon obtaining, in time of need, from the most uncivilized part of her population.

We must, therefore, acknowledge this disagreeable but incontestible truth, which is forced upon us by an examination into the state of things, that from the Baltic to the Adriatic, from the mouths of the Catara to that of the Vistula, the unhappy system adopted by the great Germanic powers, irresistibly urges the inhabitants of an immense zone of provinces to stretch out their arms towards the Muscovite dominion. Germany has but one way to escape the danger which threatens her; and that is, to imitate Russia in the depth of her views, and the generosity of her measures towards her subjects."

Sabi. See *Xaner*.

Sabine, river, N. America, rises in the province of Texas, in a prairie country, about lat. 32° 40' N., lon. W. C. 18° W. It pursues a SE. course, interlocking with the sources of the Trinity, and Little river of the S., a branch of Red river. At N. lat. 32°, and W. lon. W. C. 17° 25', the Sabine becomes the boundary between Lou. and Texas, and of course between the U. S., and the Spanish dominions in N. America. It is at this point a considerable stream, 40 or 50 yards wide, and at high water, navigable for boats of considerable size. Though rising in a prairie country, its banks at lat. 32°, is covered by a very dense forest, composed of pine, oak, hickory, elm, sweet gum, black gum, ash, and many other genera, and species of trees. From this point, to the prairies on the sea coast, the mixture of timber continues nearly similar—the W. or right bank, is higher than the E. or left in general—high bluffs are frequent, and in some places rocky precipices occur on the former bank, but no place on the latter—the low banks near the border of the stream, are mostly liable to inundation at high water—the soil near this stream is uniformly thin and sterile. Many fine creeks of clear pure water flow into the Sabine, below lat. 32°; the most remarkable from the left, are, Dugan's, Darby's, Toney's, Lafitt's, Bayou Scie, Bayou Lenau, Negritta, Bayou Taureau.

and Llana Concou. From the right, the Nalaco, Patron, Barregas, and Waukahatcha, are the principal. Below lat. 32°, the Sabine continues, SE. nearly, at lat. 31°, reaches its extreme eastern bend—here the river turns to SSW., and at N. lat. 29° 55', expands into a lake of the same name—about 20 ms. above the head of Sabine Lake, the timber ceases, though not abruptly; but 10 ms. below the head of the lake very little timber is to be seen—the banks on both sides are low and flat before emerging into the prairie—at the mouth of the river is a shell bank, on which are a few dwarf trees—along the lagunes that intersect the marsh or prairie, a few trees are scattered, but the residue is an open grassy expanse.—Though many ledges of rocks rise from the stream on the right bank, no indications of minerals are visible—at the point where the road between Nacogdoches, and Natchitoches crosses the Sabine, there is a salt spring on the Lou. side, but where the salt water issues, the ground is liable to be overflowed when the river is highly swelled by rains. The whole length of the Sabine is 70 ms. above, and 250 below N. lat. 32°.

Sabine Lake, is the estuary of the Sabine and Natchez rivers, it is about 30 ms. long, and 8 or 10 ms. wide, communicating with the Gulf of Mexico by a narrow channel of 4 or 5 ms. in length, and about 400 yards wide. This channel commonly known as the mouth of Sabine river, is at lat. 29° 24' N., lon. W. C. 17° 4' W. This lake is very shallow, generally about five or six feet, but near the shores not more than two or three. The adjacent country on the lake and outlet, is one wide waste of grass, much of it marsh, cut by innumerable lagunes, and small ponds or lakes. Four ms. SW. from the mouth of the Sabine, the Natchez enters the lake from the NW—a bar crosses the mouth of the Sabine outlet, on which at ordinary tides is about three feet water—the tide ascends the Sabine Lake and river above the prairies.

Sabina, province of Italy, in the Ecclesiastical state; bounded on the N. by Umbria, on the E. by Naples, on the S. by Campagna di Roma, and on the W. by the Patrimony of St. Peter. It is 22 ms. in length, and almost as much in breadth, watered by several small rivers, and abounding in oil and wine. Magliano is the capital.

Sabuncello, peninsula of Dalmatia, in the Republic of Ragusa. It lies to the S. of the Gulf of Narenta, and to the N. of the channel, which separates the islands of Curzola and Melida.

Saint John, cty. of New Brunswick.

St. John's, the only river of considerable magnitude which enters the bay of Fundy. This noble stream rises in Maine; its extreme northern and northwestern sources reaching to within 20 ms. of the St. Lawrence. Flowing first to the N.E., then E., and finally SE. and S., falls into the bay of Fundy, after an entire comparative course of 350 ms.; forming the largest stream on the Atlantic coast, between the basin of the Susquehanna and that of the St. Lawrence. The tide flows up this stream upwards of 80 ms.; its mouth between St. John and Castleton is narrow, and impeded by a ledge of rocks, on which there is only 17 feet water at low tide. The St. John is very difficult of entrance, from the violence and eddying of the tide, and the incumbent mass of fresh water from the river.

The ~~basin~~ of St. John is about 250 ms. in length, with a mean width of 100 ms. comprising an area of 25,000 sqms. In its natural state the St. John is one of the most navigable rivers in the Atlantic system, being much less impeded by falls than any other of the streams entering that ocean, between the Hudson and Gulf of St. Lawrence. The lands watered by either the main river or branches, are also more fertile than that contained in the other river basins NE. of the Connecticut. In point of climate the St. John's basin reaches the 48th° of N. lat., and terminates in the Atlantic coast at N. lat. 45° 10', extending through near 3° of latitude.

St. John's, city of New Brunswick, at the mouth of St. John's river. It is situated on elevated ground, regularly laid out and well built, and contains 5 churches. From the excessive tides at the mouth of St. John's river, the harbour is open throughout the year.

St. John's, lake of Lou., in Concordia, once a bend of the Mississippi. Bayou L'Argent is the outlet from the river to the lake, and leaves

St. John's, river of Florida, rises between lat. 26° and 27° N. and first N.E. about 100 ms. approaches within 6 ms. of the Atlantic Ocean, about 60 ms. nearly S., from Cape Canaveral. It thence turns NW., but curves generally with the opposite coast, and finally falls into the Atlantic Ocean at lat. 30° 12', after an entire comparative course of 300 ms. It is navigable nearly to its source.

St. John Baptiste, parish, Lou., on both sides of the Mississippi river; above St. Charles, and between St. James. Area about 10 sqms. For general features and staples, see *St. Bernard*. Pop. 1820, 3854. Old lat. 30° 4' N. lon. W. C. 15° 44' W.

St. Joseph's, small island on the coast of Mississippi, near the mouth of Pearl river.

St. Joseph's, river of Michigan, rising on the same plain with Maumee, but flowing NW. into Lake Michigan.

St. Juan de Ulua, island and very strong fortress off the harbour of Vera Cruz.

St. Landre, or *Opelousas*, pst. of Lou., and seat of justice for the parish of the same name, situated in a prairie between two bodies of woods, about half a mile asunder, on a small stream which forms part of the sources of both Teche and Vermillion rivers; the Bayou Fusilier entering Teche, and the other Bayou Bourbee, forming the head of Vermillion. St. Landre is distant 3 ms. SW. of its port, Bayou Carron. The country though level is very pleasant and healthy. Water is generally found only in wells, springs are rare, but the water is excellent, cool and light. The streets are laid out at right angles. It contains a court house, jail, a few public houses and stores, 50 or 60 houses, and about 200 inhabitants. Lat. 30° 32' N. lon. W. C. 15° 12' W.

• *St. Lawrence*, river, N. America, in the U. S., and Cabotia, or British America.

As a basin of inland commerce, it may indeed be truly asserted that the St. Lawrence stands alone on the globe. The sublime and peculiar features of that unequalled assemblage of fresh water seas demand more than ordinary attention from the geographer and statistical inquirer. This immense basin extends from the mouth of the St. Lawrence to the head waters of Lake Superior, 350 ms., with a mean width of about 400 ms. and containing an area of upwards of 500,000 sqms.

The tide ascends farther in that basin than in

that of any other of the known world, or upwards of 400 ms., by comparative courses from the gulf, to about half way between Quebec and Montreal. Above tide water to Ogdensburg, the navigation of the river is much impeded by shoals and rapids, but is in no place actually impassable with vessels, either ascending or descending. Ships of the line, or the first class, are navigated as high as Quebec, and vessels of 400 tons are taken to Montreal, upwards of 550 ms. from the gulf. St. Lawrence basin is subdivided into three natural sections, or secondary basins. First, that of Lake Superior and its tributary streams; second, that of Lakes Huron, Michigan, and Erie; third, that of Lake Ontario, and the residue of rivers to tide water. Of these in order.

Lake Superior is an immense reservoir, elevated above the level of the Atlantic tides 641 feet, and extending over a square of 300 ms. each side, or 90,000 sqms. Of this expanse, Lake Superior itself occupies a triangle of 350 ms. base, with a perpendicular of 160 ms. or embracing an area of near 30,000 sqms. This greatest fresh water lake of the globe extends from the straits of St. Mary to the mouth of St. Louis river, following the windings of the shore, 400 ms., with 50 to 150 ms. in width. Sufficient depth of water is every where found for the largest vessels. So much of the shore of this lake is rock bound, as to render its navigation in a high degree dangerous, and with the severity of the climate, and sterility of its adjacent shores in most places, will, in a great degree, deprive mankind of the benefits of such a sheet of water so far inland.

Draining 60,000 sqms. of land, it must be obvious that an immense body of water is poured into Lake Superior; which besides innumerable smaller streams, receives, from the S., Bois, Brulé, La Mauvaise, Montreal, Iron, and Huron rivers; from the N., Redstone; from the NW., Grand Portage river; and from the W., St. Louis river.

The inland route to the sources of the Mississippi, and adjacent regions, is by the channel of the latter. The following distances and relative elevations from the Fond du Lac, or mouth of St. Louis river, to the sources of the Mississippi, are extracted from Schoolcraft's travels with Governor Cass.

| | |
|--|--------|
| From the mouth of St. Louis river to the South-West Company's House, | 24 |
| To the foot of the Grand Portage, | 2 26 |
| To the Galley, | 2 28 |
| To the head of Grand Portage, | 7 35 |
| To the foot of the Portage aux Coteaux, | 6 41 |
| To the head of the Portage aux Coteaux, | 11 42½ |
| To the Isle aux Plais, | 3 45½ |
| To the Isle aux Pins, | 6 51½ |
| To the head of do., | 1 52 |
| To the foot of the Grand Rapids, | 2 54 |
| To the head of the Grand Rapids, | 6 60 |
| To Glukie Rapids, | 6 66 |
| To head of do., | 1 67 |
| To Gross Rocher, | 21 88 |
| To mouth of Savannah river, | 12 100 |
| To the Portage from St. Louis river, | 24 124 |
| Over the Savannah portage, | 6 130 |

| | |
|--|--------|
| Down another Savannah river discharge into Sandy Lake, | 18 148 |
| South-West Company's House on Sandy Lake, | 3 151 |

Relative elevations in the foregoing distances:

| | Rise in feet. | |
|---|---------------|-------|
| From the mouth of St. Louis river, to the South-West Company's House, | - | 4 |
| To the Galley, 4 ms. farther, | 8 | 12 |
| To the head of the Grand Portage, | 220 | 232 |
| To the foot of the Portage aux Coteaux, | 18 | 250 |
| To the head of the Portage aux Coteaux, | 42 | 392 |
| To the mouth of the Savannah river, | 212.6 | 504.6 |
| To the Savannah Portage, | 18 | 522.6 |
| To the head of the West Savannah, | 30 | 652.6 |

We thus find the extreme summit level, between Lake Superior and Sandy Lake, to be 550.6 feet above the surface of the former, in a direct distance of about 70 ms. If this estimate is correct, the country W. of Lake Superior has a rise, in 70 ms., of within 90.4 feet, as much as from tide water in the Hudson to the head of that lake.

Depression from the summit level to Sandy Lake.

| | Dep. Feet | |
|------------------------------------|-----------|------|
| To the first Rapid, | - | 2 |
| Descent of the Rapid, | 5 | 7 |
| Head of second Rapid, | 4 | 11 |
| Descent of do. do., | 8 | 19 |
| Thence to the level of Sandy Lake, | 4 6 | 23 6 |

This depression taken from 550.6 feet, leaves 527 feet, as the elevation of the surface of Sandy Lake over that of Lake Superior. Mr. Schoolcraft, (page 261,) estimates the entire fall from the summit level through Sandy Lake into the Mississippi, at 60 feet; and the elevation of the sources of that river, above that of the mouth of Sandy Lake river, at 162 feet.

From these elements we have 50.4 feet fall from Sandy Lake into the Mississippi, yielding an elevation of that stream at the mouth of Sandy Lake river, above the surface of Lake Superior, of 490.6 feet. If to the latter sum we add 162 feet, we have 652.6 feet, as the elevation of the sources of Mississippi river above the surface of Lake Superior. We have already found that the latter lake was elevated 641 feet above the Atlantic tides, which sum added to 652.6 produces 1293.6, say in round numbers 1300 feet, as the elevation of the sources of the Mississippi over the Atlantic tides; (see article Mississippi.) In that place it will be seen that Mr. Schoolcraft's deduction does not agree with his elements. He there reduces 1300 feet as the elevation of the Mississippi sources:—But by adding together 641 feet, the elevation of Lake Superior, 550.6 feet rise to the intermediate summit level between Lake Superior, and the mouth of Sandy Lake river, and 162 feet as the rise of the Mississippi river from Sandy Lake river to its sources, we have 1353.6 feet; and this sum, less 60 feet, the fall from the summit level before noticed, to the mouth of Sandy Lake river, leaves, as

before 1293.6 feet as the real elevation of the sources of the Mississippi.

By the river of the Grand Portage, which enters Lake Superior nearly opposite to the SW. end of Isle Royal, a route is opened with the wide uncultivated expanse upon the sources of the Winnipeg, Assiniboin, Red, and other branches of Saskatchewan. This is the great thoroughfare of the fur trade.

The enormous surplus mass of the water of Lake Superior are discharged at the falls of St. Mary, N. lat. $46^{\circ} 31'$, by a fall of 22 feet 10 inches, according to the admeasurement made by Col. Gratiot. The river, or strait of St. Mary's is about 40 ms. in length, and connects the upper secondary basin of St. Lawrence with that of Lake Huron, Michigan, Erie, and their confluent waters. The latter basin, depressed below the former 76 feet, spreads over a parallelogram of 500 by 400 ms.; or embracing a superficies of 200,000 sqms. Of this extent, Lake Huron occupies 20,000 sqms; Michigan 13,500; and Erie 13,000, or over an aggregate of 48,500 sqms. If to this we add 1500 sqms. for Lake St. Clair and Nipissing, other smaller lakes, and the rivers we have, in round numbers, in the second or middle basin of St. Lawrence, 50,000 sqms. of water, or one fourth part of the entire surface.

The middle is the most valuable of the three minor basins of St. Lawrence. In point of climate, it reaches from N. lat. $40^{\circ} 20'$, to N. lat. 47° . The arable surface is unequally divided, as near two thirds of the whole is on the right, or U. S. side of the chain of lakes. It would be needless to enumerate the great number of rivers which every where flow from the adjacent country into the lakes; we will therefore particularly notice only those which from their position have already, or may become noted channels of Inland Navigation.

Of the latter, proceeding from W. to E., the first which demands attention is Fox river, flowing into Green Bay, or the northwestern arm of Lake Michigan. The entire length of this river is 260 ms., 50 of which consists of lakes. It is formed by two branches, the Vaseux, and Portage rivers, which unite 15 ms. from Portage from the latter to the Ouisconsin branch of Mississippi. The Vaseux flows in from the NW., and from its junction with the Portage river to Winnebago Lake is 190 ms., following the windings of the stream. In this distance, Fox river in most places resembles a canal or strait more than river, its current is gentle, and often expanded into lakes of considerable extent. The river here appears to wind across a valley, which is terminated by a ridge of hills crossing between Green Bay and Winnebago Lake. The latter opens above the ridge we have noticed, and extends with a width of 5 or 6 ms., or about 24 in length. The adjacent country has been described as in a peculiar degree, fertile and agreeable to the eye.

At the bottom of the Winnebago Lake, the river changes its character: the shores become rocky, and precipitous, and the bottom of the stream much embarrassed with falls, rapids, and shoals. By a very circuitous channel of 40

ms., through this mountain pass, the navigation of the river is obstructed by the Winnebago, Little Kakalin, Grand Kakalin, and the Rock Rapids. From the foot of the latter to the head of Green Bay, is about 6 ms. of smooth water. At low water, late in the summer and early in autumn, the navigation of the mountain pass of Fox river is extremely dangerous, difficult, and fatiguing, but during the spring floods, may be ascended and descended with ease and safety.

Green Bay extends 120 ms. in length, in a direction of NNE.; nearly parallel to Lake Michigan, with which it communicates by a wide strait, about 75 ms. W. from the straits of Michilimackinac. It was through this channel, that the first discovery was made of the Mississippi river from Canada, and it has long continued, and still remains the principal route from the Canadian sea, to the upper waters of the Mississippi. The distance by comparative courses, from the mouth of Green Bay to the Portage, from the Fox to Ouisconsin rivers, is 230 ms., and down the latter stream to its junction with the Mississippi 150 ms.; but the distance, following the windings of the stream, is probably one-third more, than by comparative courses, or from Lake Michigan to the Mississippi about 530 ms.

The Ouisconsin, though a rapid stream, is unimpeded by either falls, shoals, or rapids. The Portage, from the Fox to the Ouisconsin river is one of those singular situations which the interior of America affords, where nature seems to have made preparation for the operation of human intercourse. Both rivers originate about 100 ms. to the N. of the Portage, but at the latter place they approach to within one mile and a half. The intervening ground, level prairie, over which at high floods loaded canoes are navigated from one stream to the other. This circumstance establishes the fact, of the facility of completing the connexion by a short canal, perhaps without locks.

The next point of contact between the navigable waters of the Canadian sea and Mississippi river, is near the SW. extremity of Lake Michigan. Here the small river Chicago, entering Lake Michigan, heads with the Theskiki branch of Illinois, and, from the nature of the intermediate country, opens at high water a natural, uninterrupted route between those two great sections of the U. S.

The two following lists of land and water stages from New York to St. Louis, by the Ohio and Illinois routes, will exhibit the relative distances at a single glance;

It will be at once seen by an inspection of this table that the difference in distance, by the two routes, is trifling; and all things considered, no great diversity exists naturally in the facility offered, or impediments opposed to mercantile transportation; but with the Grand Canal from Albany to Buffalo, the advantages are obviously in favour of the northern route.

Canal communication between Lake Michigan and Illinois river, must speedily follow the advance of pop. in that section of country.

A number of rivers of considerable magnitude enter the eastern and south-eastern shore of Michigan by the channels of which a considerable commerce must be carried on, as settlement and wealth increase. Of these the St. Joseph heads, with Maumee falling into the head of Lake Erie, and with Wabash flowing into Ohio. The intermediate country has not, however, been surveyed with sufficient accuracy, to permit us to determinate how far nature has prepared the way to enable man to complete the entire navigable communication from any one water to any of the others.

The Maumee is a river deserving very particular notice, in a survey of the inland navigation of the U. S. This river has its sources on the table land, between Lakes Michigan and Erie, and the Ohio river, interlocking its branches with those of Miami, Wabash, Illinois, and St. Joseph. On this extensive flat table land the streams are sluggish, and only gain current by reaching a more inclined descent. Such a construction of country is, in an eminent manner, calculated to facilitate the formation of canal and lock navigation.

Maumee is formed by three branches; the St. Joseph's interlocking with the source of the river of the same name flowing into Lake Michigan; the St. Mary's, the sources of which rise with those of the Wabash, and Miami, flowing into Ohio; and the Auglaize, heading with the Miami. From the earliest settlement of Canada, the peculiar structure of the intervening country, between the heads of the foregoing rivers struck every traveller; and at the present moment, when the Indian title to the soil is extinguished, and an active civilized pop. must rapidly arise upon its surface, the abundant natural resources for inland commerce will be called into active operation.

The St. Joseph's and St. Mary's branches of the Maumee unite near the W. boundary of Ohio, but within Ind. Turning to NE., the united streams flow in that direction, by comparative courses, about 100 ms., and fall into

the extreme south-western angle of Lake Erie. The current is in general rapid, though the bed of the river, except in one place, is unincumbered with shoals or falls. The exception occurs near Fort Meigs, 20 ms. above the mouth, where a ledge of rocks crosses the river, and produces shoals for 14 or 15 ms. along the stream. The entire depression of the river at this obstruction has never been determined accurately, but is not supposed to exceed 100 or 150 feet perpendicular. A bar crosses the mouth of Maumee river, over which there is not above seven feet water. A glance upon a map of the entire region between Ohio river and Lakes Michigan and Erie, can scarcely leave a doubt but that the channels of Maumee, Wabash, and Miami, must become the great lines of inland navigation between the Canadian sea in that quarter, and the valley of Ohio. The distance from Lake Erie, to the head of boat navigation in Maumee is, as has been observed, 100 ms. by comparative courses. By a similar mode of admeasurement, the navigable channel of the Wabash is 250 ms., making the entire channel from Erie to Ohio of 260 ms., which by adding one-third for the particular bends of the rivers, will yield an inland route of 480, say in round numbers 500 ms. The entire portage between the naturally navigable points of the two rivers is not quite 5 ms. The other route, through the Miami, is 200 ms. shorter than the former; but striking the Ohio 360 ms. higher, following the bends of the latter river, and also with a much wider intervening portage, the Miami channel offers much fewer advantages than that by the Wabash.

The next navigable route from Lake Erie to Ohio river, after the preceding, is through the Sandusky and Sciota rivers. The latter is a very direct line in intercommunication, of about 300 ms., following the bends of the streams, 100 of which are in the Sandusky and intervening portage of about 20 ms., and 200 in the Sciota. The country between the sources of Sciota and Sandusky is flat, and in spring floods in great part overflowed. The portage, as already observed 20 ms., between the naturally navigable waters of those two rivers. The navigation of Sandusky, like that of the Maumee, is impeded by rapids and falls before reaching Lake Erie, but is otherwise suitable for the conveyance of boats of considerable size.

Hitherto the confluent of Ohio river are without falls or dangerous rapids. The Wabash, Miami, and Sciota, are sluggish streams near their sources, but become more rapid in their progress towards their common recipient. They are all, at seasons of high water, navigable to very near their sources, and flow through a highly fertile country.

From the advance of pop., and from the near approximation of the Ohio river to Lake Erie, the channels of Cayahoga and Tuscarawas branch of Muskingum have been chosen by the legislature of the state of Ohio, as the route of a navigable canal to connect the Canadian sea to the valley of Ohio.

The Cayahoga rises principally in Portage and Cecauga cities, Ohio, and flowing 50 ms. SW., reaches within 10 ms. from the navigable waters of the Tuscarawas. Already a fine

boatable stream, the Cayahoga, turns at an acute angle near the village of Northampton, and flows in a direction of NNW. about 40 ms., falls into Lake Erie in Cayahoga cty. at the flourishing town of Cleveland.

The Tuscarawas rises in Wayne, Medina, Portage, and Stark cities, and forming a large navigable creek in the latter, flows SSE. 30 ms., receives Sandy creek from the E., and 12 ms. still lower, Sugar creek from the W., near New Philadelphia. Below the latter place the Tuscarawas curves gradually SE. and SW., and finally W. flows 50 ms. to its junction with Whitewoman's river at the town of Coshocton. The two rivers at their confluence are nearly of equal size and are both lost in the general name of the Muskingum. Assuming a southern course of 10 ms., Wills creek enters from the SE., and winding more to the W., 30 ms. farther, receives Licking creek, a large tributary branch, at the town of Zanesville, in Muskingum cty. Here the river is precipitated over its only falls, or rather rapid, 30 or 40 feet entire depression. Below the falls Muskingum turns to the SE. 80 ms., to its junction with Ohio river at Marietta, in Washington cty.

From this sketch, we find this inland channel lying in nearly a N. and S. direction. Advancing from Cleveland on Lake Erie, up the Cayahoga 40 ms., we reach the Portage, from the stream to the Tuscarawas; thence 10 ms. over that portage, and again down the Tuscarawas and Muskingum 212 ms. to Marietta, exhibits an entire line of 262 ms. As this is probably the first route of inland navigation to connect the river systems of Mississippi and St. Lawrence, which will be completed by act, it will be necessary to take particular notice of the steps already taken to carry those improvements into effect.

In 1814 the legislature of Ohio granted corporate powers to a company for the purpose of cutting a canal and constructing locks around the falls of the Muskingum at Zanesville. The necessary expenses of the works are calculated at from 70,000 to 100,000 dollars. The undertaking is in rapid progress, and will no doubt be soon completed. The adjacent country abounds with exhaustless beds of mineral coal, and the water power afforded by the falls, renders the vicinity of Zanesville one of the most favourable manufacturing sites in the valley of Ohio. Independent of the communication between the Tuscarawas and the Canadian sea, the canal and locks past the falls of Muskingum will open to the Ohio trade an expanse of country having an area of about 8,000 sqms.

It would be needless to notice the suggested route of water communication between lake Erie and the Ohio valley, through Big Beaver river, or the branches of the Alleghany river, as the elevation of the intermediate ground precludes any rational hope of effecting canals to a profitable issue in that quarter. We, therefore, close our observations, in this place, upon the U. S. side of the middle basin of St. Lawrence, and refer the reader to our review of the New York canals.

If we turn our attention to the Canada side of St. Lawrence middle basin, we perceive a long triangular peninsula, bounded SE. by lake Erie,

Niagara strait, and lake Ontario, on the NW. by the Detroit river, lake St. Clair, St. Clair river, and lake Huron, and on the NE. by Black river of lake Huron, lake Simcoe, a chain of small lakes leading into the head of the river Trent, down that river into the bay of Quinté, and by that bay to its mouth, into the NE. part of lake Ontario. This peninsula, of 280 ms. in length, by a mean width of about 80, or embracing an area of 22,400 sqms., is partly in the lower, but mostly in the middle St. Lawrence basin.

Through the chain of lakes, and rivers extending from lake Ontario to Gloucester bay of lake Huron, an inland route already exists, with only one short portage, which abridges the distance from the head of St. Lawrence river at Kingston, to lake Huron, one half; it being only 300 ms. from the latter to lake Ontario, by the Quinté and lake Simcoe route, and between 600 and 700 by lake Ontario, Niagara river, lake Erie, Detroit, and lake and river St. Clair.

The peninsula is the best peopled part of Upper Canada, and in the advance of population and wealth, the improvement of the Quinté, and Gloucester bay channel of inland commerce, must follow in the very nature of human affairs. This channel has some other pre-eminent advantages over that of the great valley of the Canadian sea. The falls of the falls of Niagara, and the dangerous navigation of lakes Ontario, Erie, and St. Clair.

We have now reached the lower or inferior basin of the St. Lawrence. This immense country extends from NW. to SE. 700 ms. with a mean width of 300, or over a superficies of 210,000 sqms. Of this vast expanse, the United States possess only a strip 350 ms. in length, by 70 ms. mean width, or an area of 24,500 sqms., leaving 185,500 sqms. in Upper and Lower Canada. In the Niagara strait, from the surface of lake Erie to that of lake Ontario, in a distance of about 28 ms., a depression takes place of 334 feet. Of this depression the stages are:—From lake Erie to the head of the rapids 115 feet, in the rapids 51 feet, in the falls of Niagara 162 feet, from the falls to Lewistown 104 feet, and from the latter place to the surface of lake Ontario, 2 feet.

Lake Erie is within a trifling fraction of 565 feet above the Atlantic tides; of course, 565 less 334, or 231 feet, is the elevation of lake Ontario above the same tides.

To give the reader a critical knowledge of that part of the St. Lawrence, which passes along the U. S., the subjoined sketch is given, drawn from accurate materials.

The first obstruction originates on our side, 3 ms. and 1320 yards above St. Regis. Here, for a distance of 440 yards, the velocity of the current is 3 ms. per hour; but the water being deep, and near a lime-stone shore, its navigation can be sufficiently aided by the erection of a towing path, at an expense of about \$300.

The next rapid of any consequence, is the strait separating Massena point from the head of Cornwall island. The current runs through this strait for more than 800 yards, at the rate of 8 knots per hour; but the bank is so formed at this place, that the navigation may be rendered entirely convenient by a towing path, at an expense of about 700 dollars.

About one mile and a half above Massena point commences a series of rapids, generally denominated "*The Long Sault Rapids*." For this distance navigators avail themselves of several bays formed by the incurvity of the shore, and a current to propel boats of the largest class, by setting poles and oars. On arriving at point Ellicott, $9\frac{1}{2}$ ms. from St. Regis, a very strong current is met, running, for the distance of a mile above, at the average velocity of 11 knots per hour. After doubling this point, boatmen find relief from a small basin of still water, extending upwards a few rods. The difficulties of the navigation of these rapids may be overcome by a well constructed towing road, the expense of which would not exceed 1000 dollars.

A reflux or eddy, renders navigation very easy from the termination of the last proposed path, to *Sturgeon Point*, nearly opposite to Long Sault island, and 14 ms. from St. Regis. Here boats encounter a violent rapid, called by the Canadians *La petite Chute*, in contradistinction to *La grand Chute*, upon the opposite side of the river. From the foot of the former rapids, for 890 yards, and upwards, the current rushes at the rate of 10 ms. per hour. This is considered as the most difficult passage for all boats or vessels passing between St. Regis and lake Ontario, and to render it practicable, (without the aid of locks,) it will be necessary to have a towing path of nearly a mile in length, of sufficient strength to resist the shocks of the descending ice, and wide enough to allow two or more horses to be employed at the same time in dragging boats against the stream. As a great portion of the materials necessary for this work must be brought from a great distance, the expense will be enhanced. I should suppose the completion of this work would require an expenditure of about 5,500 dollars. But to render the navigation of *La petite Chute* permanently good, I should recommend a well connected line of locks.

After passing Polly's bay, another rapid of considerable velocity occurs at Store's point. A towing path will be required here 120 yards in length, and will probably cost 750 dollars.

At Pepper Mill Point, 17 ms., 587 yards from St. Regis, is a short but very strong rapid; this may be rendered navigable by a towing path, at the expense of about 400 dollars. A short distance below the last point, is a rapid of considerable extent, that will require a towing path, which may cost 220 dollars. At Wilson's Point, opposite to the lower end of Baxter's Island, and 18 ms. from St. Regis, runs another rapid, though of no great extent. The passage of boats here will require a towing path of 250 yards in length; to construct this, and to remove a quantity of rocks lying along the point, will occasion an expense of about 350 dollars. At Point Hemlock, $19\frac{1}{2}$ ms. from St. Regis, is a rapid that makes a towing path of about 100 yards in length necessary; this may cost 200 dollars. There is an obstruction in the navigation from Point Hemlock to Bluff Point, other than a steady current, whose average velocity is about 2 ms. per hour. At the last mentioned point, we find rapids of considerable swiftness; but these are of inconsid-

able length, and materials to form a path are at hand and plenty; its expense is estimated not to exceed 450 dollars. At several places between Bluff Point and Dry Island, (a distance of about 8 ms.) the strength of the stream obliges the boatmen to have recourse to their setting poles; but in no place is it so swift as to make a pathway indispensably necessary. Dry Island itself, however, requires some notice: it is so called, because separated from the N. York main by a small stream, which in the summer season is nearly dry. It appears, indeed, that this passage between the inland and main was made several years ago. The bottom of this channel is composed of clay and round stones, mixed with gravel. A canal, sufficient for all the purposes of navigation, may here be completed at an expense of 1000 dollars. The next rapid that requires consideration is *Rapide plat*, running between an island of that name, and the little village of Hamilton, (now called Waddington.) These falls are 37 ms. above St. Regis. Judge Ogden, who resides upon the island, has erected a dam and bridge across them. It is not previous to the erection of this dam, that the current was very impetuous for several miles, and that an abrupt fall of nearly ten feet, rendered the navigation utterly impracticable. The water having become comparatively smooth by means of the dam, Judge Ogden and others supposed that boats would be transported over his dam by means of a lock, and on petitioning the legislature of the State of N. Y., obtained an act, dated 1st April, 1810, authorizing them to construct such a canal and locks as they should think proper to aid the navigation to this place. The grantees were authorized to receive a toll of 50 cents for every vessel under the burthen of two tons, above two tons, and not exceeding six, one dollar; and for every vessel exceeding six tons, one dollar and fifty cents. By this act, the canal and locks were to be erected in three years from the first of July, 1809, and were to be sufficiently large to afford free passage of boats of 50 feet in length, 10 feet in width, and drawing two feet and a half water. Intending to accomplish the object of this law, Judge Ogden has built a lock 100 feet in length, and $10\frac{1}{2}$ feet lift. The walls are of stone, laid in the best cement, are 6 feet thick, and 13 feet in height. The capacity of the lock is such as to admit a vessel of 75 feet hull, 13 feet beam, and drawing $3\frac{1}{2}$ feet water. The plan is, in my opinion, judicious, and the work, as far as it has been accomplished, is well executed. The lock above has cost about 12,000 dollars, and it is estimated that a dam built of stone, will require 12,000 more, or, if built of stone and timber, 7,000 dollars. The completion of these will constitute a lasting and easy passage for boats. The next rapid we meet is at *Point Iroquois*. The removal of a quantity of loose stones lying in the river, at the extremity of this point, and the construction of an ordinary towing path, of about 100 yards in length, would sufficiently facilitate navigation here. Five hundred and fifty dollars, judiciously expended, will complete this improvement.

About 2 ms. above Point Iroquois, and at the head of Tousant's Island, is a rapid of about 400 yards in length, but of no great velocity.

A pathway, that can be made for 200 dollars, will answer here.

Four ms. above the last mentioned place, commences the *Rapide au Gailoupe*. This is generally known by the name of the Red Mills, and is of great force for 250 yards. Although navigation may be rendered practicable here by means of a wide, and strongly constructed towing path and railing, yet I could recommend the substitution of a lock and canal. A lock of 5½ feet lift, and a canal 100 feet in length, would be sufficient. But little excavation will here be necessary, and as stone and materials abound on or near the spot, it is believed that the expense of such a canal, with walls of stone laid in mortar, and the construction of a good lock, would not exceed 10,000 dollars. A towing path alone, such as I have described, will cost about 1500 dollars.

At Tibbit's Point, near the Red Mills, the current is such as to make a short pathway necessary. The expense of which may be estimated at 200 dollars.

There are no obstructions to a free and easy navigation from Tibbit's Point to Lake Ontario.

Recapitulation of the expenses of improving the navigation of St. Regis to Lake Ontario, by means of towing paths, including the lock, canal, and bridge at the *Rapide Plat*.

In the foregoing, I have endeavoured to point out, with as much precision as my information would allow, the places where improvements are necessary, together with the expense at which they may be respectively effected; and although the estimates have been made with great care, it is probable that in some cases they are computed too high, in others, too low; I feel pretty confident, however, that the above sum is sufficient to accomplish the object in view.

My remarks have hitherto been confined to the shores of the St. Lawrence; but I deem it a duty to present another project for improving the navigation along the frontier; from the adoption of which most important benefits are anticipated.

From the mouth of Grass river to a place called *Fauches Mills*, is about 7 ms.; for this distance, with the exception of a short and inconsiderable rapid 4 ms. from its mouth, the river affords an excellent communication for vessels of 30 tons, those being the largest generally employed between Ogdensburg and Montreal.

My design is to connect the St. Lawrence with Grass river, by opening a canal from the bay above Wilson's Point, to the foot of the rapid at Fauches Mills.

As there are no villages on the St. Lawrence to be accommodated, or in any way affected, by the canal from Wilson's Point to the mouth of Grass river, the shortest practicable route ought to be pursued. It is true that art, combined with great labour and expense, may do much towards improving the navigation of these rapids. I scarcely believe it possible that all the difficulties opposing themselves to any easy passage can be entirely surmounted. Besides, any works erected upon them, must be equally affected and endangered by the intrusion of immense bodies of ice and water rushing against them.

The canal can be supplied with water in abundance, at the summit, just above Wilson's Point, and the arrangement and quality of the strata upon the above route are favourable for a canal. There are no ranges of very high or very low lands; and there are no valleys, springs, brooks, or rivulets, (with one exception,) worthy of notice that cross it. For a considerable portion of the distance, the soil is composed of loam and clay, through which water cannot percolate; the soils of the residue, however, are porous, consisting of sand and gravel, but as the country here abounds with the best muddling stuff, (loam and coarse sand mixed) it is fair to presume that the expense will not be great. A short distance above Pepper Mill Point, the route is crossed by a bank upon which a aqueduct.

It will be necessary to dig deep for a short distance at the proposed commencement of the canal, unless it should be thought expedient to run it along the shore for about 900 yards below. This could be done with ease, the bank of the river at this place being composed of clay and loam. As the main river will always be referred for a downward passage, it only becomes necessary to provide for ascending vessels. The projected canal need not, therefore, be so deep as to admit large boats to pass each other. Twenty-five feet in width upon the surface of the water, 16 feet at the bottom, and 3½ feet water, will, it is believed, be sufficient.

It is the opinion of Mr. Adams, (our astronomical surveyor) that no more than four locks, of ten feet lift, would be required upon this route; and as the average length of these will not exceed 75 feet, the expense of lockage may be safely computed at 32,000 dollars. The cost of this canal would not vary much from the following estimate.

| | |
|--|------------------|
| Expense of excavating, say two ms. and three-fourths | \$6,500 00 |
| Grubbing, clearing away timber, puddling and towing paths, | 5,750 00 |
| Wooden aqueduct over a brook at Grass river, | 3,500 00 |
| Four locks, | 32,000 00 |
| Clearing out and deepening the channel at the small rapids in Grass river, | 500 00 |
| Tools and implements, | 3,500 00 |
| Engineer superintendence, | 4,000 00 |
| Add for contingencies, 5 per cent. | 2,787 00 |
| Aggregate, | 58,537 00 |

The expenses of facilitating navigation along the shore of the St. Lawrence, from Massena Point to Point Wilson, (both included,) by means of locks and towing paths, amounting according to my estimate, to 34,000 dollars. Deduct this sum from that at which the canal can be opened, and it presents a difference of 24,537. The advantage of the canal navigation over that of the river, is too apparent to require elucidation.

Should the canal project be adopted, the expenses of improving the navigation from St. Regis to Lake Ontario, will stand thus:

| | |
|------------------------|---------------------|
| Canal, | \$58,537 00. |
| Towing path and locks, | 46,145 00 |
| | \$104,682 00 |

The foregoing communication is alike honourable to the intelligence and patriotic feelings of its author, but in his estimate of expense, he has no doubt been much too limited. The series of rapids from Ogdensburgh to St. Regis is very correctly delineated. The causes which have hitherto carried the navigation to the Canada shore of St. Lawrence were, as Col. Hawkins states, in a great part political, but the mere circumstance of the uncultivated condition of the U. S. shore, has had a large share in producing this result.

If sometimes the sum estimated by Col. Hawkins was expended upon this inland navigable line, it would be money most beneficially employed.

Below the limit of the U. S., the St. Lawrence expands into lake St. Francis, of about 30 ms. in length, with a mean width of 4 ms. At the lower end of this lake the river again contracts into two narrow channels, separated by Gros Isle. Here rapids again occur, which is also the case at the Cedars, a few ms. lower down. At the lower end of the Cedar rapids, the river again dilates, leaving one channel communicating with the Ottawa river, and the other opening into St. Louis. The latter continues 17 ms. to La Chine, the upper port of Montreal. Here the river is once more restricted to a confined channel, with strong rapids. Nearly opposite to Montreal, however, the last rapids occur, and below that point to lake St. Peters, or head of tide water, the current is gentle, and channel sufficiently deep for 600 ton vessels.

The observations upon the St. Lawrence basin might be indefinitely enlarged, but we must close our general view of this subject, with a few brief notices.

Ottawa or Grand river, is a great northern

branch of St. Lawrence, rising in the imperfectly known regions N. from lake Huron, and flowing SE. by comparative courses, 600 ms. falls into the Coteau du Lac, 25 ms. nearly W. from the city of Montreal. The Ottawa, often called the Grand river, is one of the routes pursued by the Canadian traders, who ascend that river, and by a short portage, enter lake Nipissing, and from the latter into lake Huron. The distance from Montreal into lake Superior is one third longer through the St. Lawrence and great lakes, than by the Ottawa river. The navigation of the latter is much encumbered with rapids and shoals, but is, nevertheless, much frequented, from its superior safety, and from being so much shorter.

Montreal is extremely well situated to become the centre of a very extensive inland commerce. It is already such, as far as the advance of pop. will admit. Standing at the head of ship navigation, this city is on the St. Lawrence, the point of contact between the foreign and interior commerce of an immense expanse of country.

La Chine is the upper port of Montreal, and situated on the same island with that city, and at the lower extremity of lake St. Louis. La Chine is the centre of shipment between the Upper and Lower provinces, and the North country. In May and November, boats, to and from various parts of Upper Canada, are continually arriving and departing from this place. They are from 35 to 40 feet in length, with about 6 feet beam; their usual freight from 4 to 4½ tons. They are worked by oars, a mast, and sail, drag-ropes for towing, and long poles for setting them through the strong currents or rapids. Four men manage them in summer. They bring down wheat, flour, salt provisions, pot and pearl ashes, and peltries. They are usually navigated in squadrons of from 4 to 15 boats, in order to enable the crews to aid each other in passing the rapids.

From La Chine, the bark canoes employed by the North-West company in the fur trade take their departure. Of all the contrivances for transporting heavy burthens by water, these vessels are perhaps the most extraordinary. They are formed by a slight frame, to which the bark of the white birch tree (*betula alba*,) in slips is attached. These canoes are the lightest of all navigable vessels to their capacity. It is the latter circumstance which enables the Canadian boatmen to perform so many long and fatiguing portages, with their vessels and cargo.

With these light canoes the traders proceed up the Grand, or Ottawa river, to the SW. branch, by which, and a chain of small lakes, they reach Nipissing; through it, and down the French river, into lake Huron, along its southern coast, up the narrows of St. Mercy, into lake Superior; and then, by its northern side, to the Grand Portage, a distance of about 1100 ms. from the place of their departure. From the Grand Portage, which is 9 ms. across, there is a continuation of similar toils and bark canoes of smaller size, through chains of lakes and streams, that run from the height of land westward to the lake of the Woods, and Lake Winnipeg, to the more distant establishments of the company in the remote regions of the northwest country.

From the city of Montreal to the eastward, the shores are from 15 to 20 feet above the level of the St. Lawrence; but, in the opposite direction, towards La Chine, they are low. Between the Coteau St. Pierre and the river, the land is so flat, and particularly near the small lake St. Pierre, so marshy, as to induce a conjecture that it was once covered with water. Over this place it is intended to cut a canal, by which a direct communication would be formed between La Chine and the city, and the rapid St. Louis (intervening) avoided.

Near the head of lake St. Louis extends the Point des Cascades, and in the river lies the island des Cascades, which with one or two other smaller ones, break the current of the river at its entrance into lake St. Louis, and present nearly the same effect that would be produced by the most violent tempest. To avoid these, a canal usually called the Military Canal, has been constructed across the point of land, and through which the boats pass to the locks at Le Buiesien; it is 500 yards in length. At a place near Lorguilla mill, the boats going up the St. Lawrence are impeded, and their freights transported in carts to the village, while the empty boats are towed through the rapid du Coteau des Cochons. At Coteau du Cac, just above the river de Liard, ascending boats again enter locks, to avoid a very strong rapid.

We may now take a brief view of those rivers by which a water communication is had from the U. S. to the St. Lawrence. Of these, the most important is the river Richelieu, which flows from the lake Champlain, in a northerly course, and unites with the river St. Lawrence, at the town of William Henry. The navigation is carried on by boats, canoes, and rafts. From its junction with the St. Lawrence, decked vessels of 150 tons may ascend 12 or 14 ms.; its mouth is about 250 yards in width, and this continues nearly to the basin of Chambly; from thence to the Island du Portage, it is 500 yards; beyond this, it is double that extent to St. John's, from whence there is a ship navigation 160 ms. along lake Champlain. From the basin down to the St. Lawrence, the current is gentle, notwithstanding the shoals and flats; but from lake Champlain, the stream is in some places broken by rapids. There is much trade upon this important navigation, and its importance is unequivocal.

The river St. Francis is also an important line of communication, only it is obstructed by a number of violent rapids; its source is a large lake of the same name, in the tps. of Gartley and Coleraine; it flows in a SW. direction for 30 ms. then nearly NW. for about 80 ms., and falls into the lake St. Peter; a branch connects with Lake Memphremagog, from which several streams descend into the state of Ver. Notwithstanding the imperfection of this navigation, much trade is thereby sent to the St. Lawrence.

The general staples brought down the St. Lawrence, are peltry, grain, flour, and timber. The town of Ogdensburg, at the mouth of the Oswegatchie, in St. Lawrence co. N. Y., is the point of contact between ship and boat navigation above the rapids. From Ogdensburg

the navigation is pursued up the St. Lawrence, and through lake Ontario, in sloops and large vessels, 170 ms. to the river Niagara, where, on account of the great falls, a trans-shipment and land-carriage takes place, in order to reach lake Erie. Canals have been proposed, both on the British and American side, to pass the falls. At present, on the British side, the goods are landed at Queenstown, 7 ms. within the Niagara river, from whence they are transported by wagons to the Chippewa creek. Down this river they are sent into lake Erie, (23 ms. in length,) which is navigated by vessels of 60 or 70 tons, that pass through the straits of Detroit, (28 ms. long,) and the lake of St. Clair, (20 ms. across,) and along the river St. Clair, (60 ms. in length,) into the lakes, Huron and Michigan. In lake St. Clair the water is so shallow, that the vessels must be lightened. Between lake Huron and lake Superior, are the rapids of St. Mary's straits, along a part of which a canal has been formed by the North-West Company.

The river St. Lawrence, from Quebec to Kingston, and a great part of the lakes, are frozen over from the beginning of December until the month of April, and during that period navigation of course, ceases, but sledges are passed upon the ice. See *Lower Canada, Montreal, Quebec, &c.*

St. Lawrence, northern co. of N. Y. on St. Lawrence river; bounded by St. Lawrence NW., Franklin co. of N. Y. E., Hamilton and Herkimer co. S., and Herkimer, Lewis and Jefferson SW. Length 60 ms., mean width 44; area 2640 sqms. It is drained by Oswegatchie, Grass, Racket, and St. Regis rivers. The surface is rather uneven than hilly; and much of the river soil excellent, and all exceedingly well timbered. Chief towns, Ogdensburg and Hamilton. Pop. 1820, 16,037. Ctl. lat. 44° 30' N. lon. W. C. 2° E.

St. Leonard's, pst. Calvert co. Md., on the W. side of Chesapeake bay, about 10 ms. NW. of Drumpoint, 12 ms. NE. of the town of Benedict on Potomac, and 58 from W. C.

St. Louis, co. of Miss., bounded by Missouri river NW., Mississippi E., Mississippi river S., and Franklin co. W. Length 100 ms., mean width 15; area 600 sqms. Ctl. lat. 38° 40' N. lon. W. C. 2° W.

St. Louis, pst. and capital of the territory of Miss., on the right bank of Mississippi, 18 ms. below the mouth of Missouri. The site of this town is a gentle acclivity, terminating in a plain in the rear of the buildings, the latter resting on a limestone base. The town is laid out in three parallel streets, running north and south and extending along the river to the St. Louis portage; some of the principal streets of local position. It is already a large and flourishing, the principal depot for the immense regions drained by those numerous rivers, the congregated waters of which are here collected into one great stream. The pop. of this place has very rapidly advanced. In 1803, when transferred to the U. S. the inhabitants fell short of 1000; in 1810 they amounted to 2000, in 1820, to 4500; and now, 1830, no doubt exceed 5000. It contains a museum, theatre,

land office, 2 banks, and several manufactories of different kinds. (Lat. $38^{\circ} 46'$ N. lon. W. C. $12^{\circ} 58'$ W.)

Saint Louis, river of the NW. territory of the U. S.; rising between lake Superior and the Mississippi river, and flowing S. turns SE., and finally E., falls into the extreme western bay of lake Superior. It is one of the channels of intercommunication between lake Superior and Mississippi river. See *St. Lawrence basin*. The United States NW. company have an establishment on this river a few ms. above its mouth.

Saint Lucas de Barameda, seaport of Spain, at the mouth of the Guadalquivir.

St. Malo, seaport of France, in the department of Morbihan. It has a spacious harbour, but difficult of access, on account of the rocks that surround it; it is a trading place, of great importance, defended by a strong castle. St. Malo is seated on an island, united to the mainland by a causeway. It is chiefly inhabited by seafaring men, who in the time of war fit out a great many privateers to cruise upon the English coast, 17 ms. NW. of Dol, and 505 W. of Paris. (Lon. $1^{\circ} 57'$ W. lat. $48^{\circ} 39'$ N.)

St. Mary's, pstv. Chester cy. Penn.

St. Mary's, strait of, between lakes Superior and Huron. The catract, or Sault St. Mary, is 15 ms. below lake Superior, at N. lat. $46^{\circ} 31'$. The entire fall from the level of lake Superior to that of lake Huron is about 23 feet. It is, however, navigable with some difficulty for canoes and boats. Vessels of six feet draught ascend to the foot of the falls. Those of larger size are compelled to stop at Sugar island. From lake Huron there are two passages; the one on the NW. side, for boats 20 ms.; and the other on the NE. side, for vessels 12 or 14 ms. farther, or about 35 ms. By deepening the channel in one place a short distance, it is said that vessels of any size can ascend to the Sault. The U. S. government have formed an establishment at this place. On the 29th of June, 1822, near 300 soldiers set out from Detroit under the command of Col. Brady, and arrived at the falls on the 17th of July, and commenced the works; which are to consist of 6 blocks of officers' and as many of soldiers' quarters, including a hospital. A cession of the soil, 4 ms. square, was obtained in 1820, from the Chippe-way Indians.

Salina, pst. Onondago cty. N. Y., about 50 ms. W. from Utica, on Onondago Lake. The tp. spreads around Onondago Lake, and embraces the villages of Salina, Liverpool, and most of the very rich salt springs in the neighbourhood. Salina stands on the E. side of the lake, contains about 100 houses, 500 inhabitants, and is connected with the Erie canal by a side cut of one mile and a half. Liverpool, 4 ms. NW. from Salina, is about similar in size and pop. The amount of salt-works in operation exceeds 130, and may be increased to any necessary amount. Gypsum also abounds in this vicinity. Since the above was written I visited Salina, in July 1823. The Saline ground is there, as I have found every where else, a marsh. The water is pumped from shallow wells, and evaporated by artificial heat. Extensive pans were then erecting between Salina and Syracuse, for the purpose of making salt by solar heat. Of the success of the plan I am uninformed. See *Syracuse*.

side of Savannah river, in Chatham co. in lat. $32^{\circ} 5'$ N. lon. $81^{\circ} 24'$ W. and about 15 ms. from the ocean. The town is accounted healthy for so hot a climate, being seated on a bluff in a bend of the river, and elevated considerably above the surrounding plantations. The wet mode of cultivating rice, it is supposed, contributed much to the insalubrity of the summer and autumn seasons in Savannah. In 1817, the citizens of that town voted \$70,000, to induce the proprietors of rice farms in the vicinity, to abandon the wet, and adopt the dry mode of culture. Vessels of large burden can moor close to the town, but from its vicinity to the ocean, they are often exposed to tremendous floods. The trade is great, and increases rapidly. In 1803, the exports amounted to \$2,370,875. From September, 1816, to June 1817, inclusive, there were exported 107,320 bales of cotton; 3,605 hhds. of tobacco, and 11,228 tierces of rice. The whole valued at 996,503 dollars. In 1816, the amount of shipping was 12,776 tons. Here is a bank of discount and deposit.

Schwenen, town of Germany, in Upper Saxony, on the isle of Usedom. Lon. $14^{\circ} 18' E$. lat. $54^{\circ} 15' N$.

Schweiz, canton of Switzerland, which gives name to them all. It is bounded on the W. by the cty. of the Four Cantons, on the S. by the canton of Uri, E. by that of Glarus, and on the N. by those of Zúric and Zug. The government of Schweiz and Uri is entirely democratical, and nearly the same. They contain,

including their subjects 30,000 souls; and, in case of necessity, could furnish 12,000 militia. The same kind of soil, and the same productions, are common to the two cantons; purity of morals prevails, which can scarcely be imagined by the inhabitants of great and opulent cities. The Roman catholic religion is here exclusively established. The canton suffered in common with all Switzerland when invaded by the French in 1798, being dreadfully wasted and desolated.

Schweitz, town of Switzerland, capital of the canton of that name, seated near the Waldstatter See, on a hill, with a large and magnificent church. It is 10 ms. SE. of Lucern. Lon. 8° 30' E. lat. 46° 55' N.

Sciglio, or *Scilla*. See *Scylla*.

Scilly, cluster of islands and rocks, lying almost 10 leagues W. of the Land's End, in Cornwall, and are easily discerned from it. Of these only 5 or 6 are inhabited. The inhabitants principally subsist by fishing, burning kelp, and acting as pilots. The chief of the islands is St. Mary's, which has a good port, is the best cultivated, and contains more inhabitants than all the rest put together. In this island and two or three others, are various antiquities, particularly the remains of a temple of the Druids, and ancient sepulchres; but the greatest ornament is the light-house, which, with the gallery, is 51 feet high, and is a very fine column. The Scilly rocks have been fatal to numbers of ships entering the English Channel. One of the most disastrous events of this kind happened in 1707, when admiral Sir Cloudesley Shovel, with three men of war, perished with all their crews. Lon. 6° 46' W. lat. 49° 56' N. These islands are called Solingues by the French.

Scilly, group of islands in the S. Atlantic Ocean, discovered by Capt. Wallis, in 1767. Lon. 155° 30' W. lat. 16° 28' S.

Scimitar, village of Greece, in Laconia, about 7 ms. from Negroponte, and 12 from Sparta. It contains about 80 houses, inhabited by Greeks.

Scind. See *Sindy*.

Scio, anciently called Chios, celebrated island of the Archipelago, near the coast of Asia Minor, NW. of Samos. It is 32 fms. long, and 15 broad, and a mountainous country; yet fruits of

various kinds grow in the fields, such as oranges, citrons, olives, mulberries, and pomegranates, interspersed with myrtles and jasmines. The wine of Scio, so celebrated by the ancients, is still in great esteem; but the island is now principally distinguished by the profitable culture of the mastich; it has also some trade in silk, wool, cheese, and figs. Scio has recently become the scene of some disastrous events. In the summer of 1822, the Turks landed a force on the island, and massacred, or led into slavery, it is supposed, at least 30,000 persons, of both sexes, and all ages, and reduced most of the towns and villages to ruin. See *Chios*. Before this sanguinary invasion, Scio was supposed to contain 110,000 inhabitants.

Scio, seaport, the capital of an island of the same name. It is the best built town in the Archipelago; the houses being commodious, some of them terraced, and others covered with tiles. The castle is an old citadel, built by the Genoese. The harbour is a rendezvous for ships that go to, or come from Constantinople; it will contain 80 vessels, and is protected by a low mole and two light-houses. It is seated on the E. side of the island, 47 ms. W. of Smyrna, and 210 SW. of Constantinople.

Sciota, river, the second in magnitude of those flowing entirely within the state of Ohio. It rises in Hardin, Marion, and Richland counties first NE. 10 ms. thence SE. 30 ms., where it receives Little Sciota from the NE., and there it gradually turns into S. by E. and finally into a generally S. direction, 150 ms. further, to the Ohio river, between Portsmouth and Alexandria, by a mouth 150 yards wide. It is navigable 130 ms.

Sciota, salt works, near the centre of Jackson cty. Ohio, reserved by the U. S., about 28 ms. SE. from Chillicothe.

Sciros, island of the Archipelago, W. of Mytilene. It is 15 ms. long, and 8 broad, is a mountainous country, but has no mines.

The vines make the beauty of the island, and the wine is excellent; nor do the natives want wood. It contains only the village and convent of St. George, both built on a conical rock, 10 ms. from the harbour of St. George. The superior of the convent exercises despotic sway over the inhabitants, whose superstition is more excessive than that of the other Greeks in the Archipelago. The inhabitants are all Greeks, but the Qadi is a Turk.

Scenectady. See *Schenectady*.

Scлавonia, country of Europe, between the rivers Save, Drave, and Danube. It is divided into six cities, and belongs to Austria; it was formerly a kingdom, and is not above 75 ms. in length, but it is 300 in length, from the frontiers of Austria to Belgrade. The eastern part is called Ratzia, and the inhabitants Rascians. These form a particular nation, and are of the Greek church. The language of Scлавonia is the mother of four others, namely, those of Hungary, Bohemia, Poland, and Russia.

Scotland, or *North Britain*, the northern of the two kingdoms, into which the island of Great Britain was formerly divided. It is bounded on the W. by the Atlantic Ocean, N. by the North Sea, E. by the German Ocean, SE. by England, and S. by the Irish Sea. To Scotland also appertain the islands on the western coast, called the Hebrides, or Western Islands, and those to the NE. called the Orkney and Shetland Islands. From N. to S. it extends 270 ms., and its greatest breadth is 150, but in some places not above 30, and no part is distant above 40 miles from the coast. It contains about 17,788,000 acs., and the number of inhabitants in 1801 was 1,200,000. In 1811, 2,805,688, and in 1821, 2,800,000. Scotland is divided into two districts, the Highlands, and the Lowlands; the former is applied to the mountainous part to the N. and NW., the latter the more level district on the E. and SE. But nature seems to have pointed out three great divisions in Scotland. The first, or N. division, is formed by a chain of lakes, which cross the country, from the frith of Murray, to the island of Mull, in a SW. direction; the second, or middle division, is bounded on the S. by the friths of Forth and Clyde, and the great canal by which they are united; on the S. side of this boundary is the third or S. division. The N. division consists of asemblage of vast dreary mountains, not, however, without some fertile valleys on the

northern and eastern shores. The middle division is traversed in different directions, by several ranges of mountains; and though cultivation here is also found chiefly on the eastern shore, yet of this division as well as of the former, the arable land bears a small proportion to the mountainous and barren tracts. The S. division has a great resemblance to England, and with respect both to the general aspect of the country, and to the progress of cultivation, exhibits every kind of rural variety. The civil division of the country is into 33 cities, namely, Shetland and Orkney, Caithness, Sutherland, Ross, Cromarty, Inverness, in the N. division; Argyle, Bute, Nairn, Murray, Banff, Aberdeen, Kincardine, Angus, Perth, Fife, Kinross, Clyckmannan, Stirling, Dumbarton, in the middle division; and Linlithgow, Edinburgh, Haddington, Berwick, Renfrew, Ayr, Wigton, Lanerk, Peebles, Selkirk, Roxburg, Dumfries, Kirkcudbright, in the S. division. The principal rivers are the Spey, Don, Tay, Tweed, Clyde, Forth, Northern Dee, Esk, Annan, Nith, and Southern Dee. Edinburgh is the capital.

Seiks, a powerful religious warlike sect, which rules a large extent of the northwestern part of Indostan, and particularly Lahore. They predominate also in Moulthan, and the western part of Delhi. Their government, similar to the Mahrattas, is feudal. Their founder, Nanock, was born in Lahore, early in the 15th century, and by teaching a mild and tolerant system of philosophy, of rather religion, formed a sect, which Mahometan intolerance subsequently forced to become warriors, and in the course of last century their military operations were generally successful, though much divided by intestine contentions. The Seiks were used by the British authorities in India as a counterpoise to the Mahrattas.

Sevilla, province of Spain. See *Spain*.

Seville, city of Spain, capital of Andalusia, and an archbishop's see, seated on the Guadalquivir. It was the capital of the kingdom, till Philip II. established his court at Madrid, as a more central position. Seville is of a round form, fortified with strong walls, flanked with high towers, and takes up more ground than Madrid, although it now has not above 70,000 inhabitants. The Phoenicians called it Hippa, and it is the Julia of the Romans, who embellished it with many magnificent buildings. The floors built an aqueduct, still to be seen, 6 1/2 ms. in length. The situation of Seville renders it one of the most commercial towns of Spain. All the trade of that kingdom with the New World, centered originally in its port; but that of Cadiz having been found more commodious, the galleons have sailed from that place since 1720. Such vast employment did the American trade give at one period, that in Seville alone, there was no fewer than 16,000 looms in silk or woollen work; but before the end of the reign of Philip III. they were reduced to 400. The country around is extremely fertile in corn, wine, &c. and there is abundance of oil, for the W. of

Siberia, from Sibir, its ancient capital, is the general name of Asiatic Russia. It is bounded N. by the Froze ocean, W. by the Uralian mountains, which separate it from Europe, on the SW. the Algydin-Shalo mountains separate it from Independent Tartary; on the S. the Altaian and Daorian mountains form the line of demarcation between the Russian and Chinese empires; and on the E. the Pacific, and its extension northward divides Siberia from North America. This immense tract is about 4000 ms. from W. to E., and varies in width from 1000 to near 2000 ms. The area rather exceeds 5,000,000 sqms., or about one-eighth part of the terraqueous Earth. In general terms, Siberia may be described as mountainous, on the W., S., and E., and gradually sinking into vast plains towards the Arctic ocean. Viewed on a map, this part of Asia appears evidently as a section of a basin having the Arctic ocean as its lowest point of depression. Into this recipient are discharged a series of rivers, most of which draw their remote sources from the interior table land or plateau of Asia. From its slope, and having its highest side to the southward, the phenomenon of the excessive cold of Siberia arises. The Oby, Jenisey, and Lena, flow from an elevation of at least 3000 feet. The plains called in Asia, steppes, are in every respect similar to the prairies or natural meadows of North America. See *Steppes*.

Extending from N. lat. 50° to nearly 80°, and having, as we have seen, a great northern inclination and southern elevation, Siberia has the most intense winter climate of the Earth in proportion to comparative lat. From this asperity of temperature, and also from general sterility of soil, the northern part of Siberia is thinly peopled. It is a region where the rein-deer and the dog are the beasts of burthen and draught; and where furs and ivory are the most valuable commodities. Advancing southward, into a milder air, the climate meliorates, and the grain and fruits of Europe are cultivated to advantage; but every where on these elevated regions the climate is much more severe than in similar latitudes in Europe. A part of the large government of Kolywan, and the country round the Baikal, are on the latitudes of London, Hamburg, Berlin, and the N. of France and Germany. The winter is 9 or 10 months long in almost all Siberia, and the summers of its most southern sections, are not either so long or warm as those of Norway. Similar to North America, in high northern latitudes, the soil of Siberia above 55° or 60°, remains perpetually frozen at a very small depth, and renders the digging of wells impracticable.

The air, however, though severe, is generally healthy, but the pop. must, from the cause stated, be always comparatively thin.

Siberia is rich in metallic wealth, so much so as to have received and deserve the name of the Russian Peru. Gold mines exist, and are extensively worked at Barezof. Silver is found near Kolywan, and Neretchinsk, and in many other places. Iron and copper abound particularly in the Uralian mountains, but are also found in lesser quantities, in many other locations.

The vegetable kingdom, however, affords the true test of climate. The pine of Norway rises as high as N. lat. 70°; the same tree yields to the intense frost of Siberia at N. lat. 60°. On the Oby, at lat. 60°, agriculture ceases, and similar to North America, the line of vegetation inflects southward, proceeding eastward towards the Pacific Ocean. At Oodskvi, in 55°, nor in Kamtschatka, at 51°, grain has not been found to ripen.

The severity of Siberian air is again shown by the animal kingdom. The rein-deer, which in northern Europe exists only above 60°, was seen in large flocks, by Pallas and Sokolof, on the borders of Mongol Tartary, as low as 49° or 50°. "Thus the countries of the rein-deer and camel," says Malte Brun, "which are separated by an interval of 20° or 30° in the western part of our continent, touch one another, and are perhaps mingled in the countries of the east.

In those gloomy regions, the dog follows the rein-deer as the servant of man; the former is also used as a beast of draught, but abounds chiefly amongst the Kamtschatkades, Tonggooses, Samoules, and Ostiaks. In southern Siberia the horse abounds, as do cattle and sheep. In animals producing fur, northern Siberia exceeds every other part of the Earth. In brief, this large section of the habitable earth, now under Russian government, is slowly recovering from the murderous ravages of the Tartars and Mongols of the middle ages.

Sichem, town of the kingdom of the Netherlands, in Brabant, to the S. of which is a celebrated monastery. It is seated on the Demer, 18 ms. SE. of Mechim. Lon. 5° E. lat. 51° 6' N.

Sicily, island of the Mediterranean Sea, almost in the form of a triangle, terminating in three points or capes; that which is nearest Italy, is called Cape del Faro; that which regards the Morea, Capo Passaro; and the third, which points to Africa, Capo di Iocco. Sicily is naturally divided into three valleys, to which the political names of provinces have been given; they are Val di Mazara, Val di Demona, and Val di Noto. See those articles in their places. It is separated from Italy by the straits of Messina, 15 ms. broad where narrowest. The climate is delicious, and soil exuberantly fruitful. In ancient times it had the aspect of a garden, but in modern times, badly cultivated. Present pop. about 1,600,000. Religion, Roman Catholic. It forms a part of the kingdom of Naples, or of the two Sicilies. Length 165 ms.; and breadth where widest 112.

Sindy, or *Scind*, province of Hindoostan Proper, bounded on the W. by Persia, on the N. by the territory of the king of Candahar, on the NE. by those of the Seiks, on the E. by a sandy desert, and on the SE. by Cutch. It extends along the course of the Indus, from the mouth, to the frontiers of Moultan, 300 ms.; and its breadth, in the widest part, is 160. In many particulars of soil and climate, and the general appearance of its surface, it resembles Egypt; the lower part being composed of rich vegetable mould, and extended into a wide delta; while the upper part is a narrow strip of country, confined on the Persian side by a ridge of mountains, and on the other by a sandy desert, the Indus, equal at least to the Nile, winding through the midst of this level valley, and annually overflowing it. During great part of

the SW. monsoon, or at least in July, August, and part of September (which is the rainy season in most other parts of India) the atmosphere is here generally clouded; but no rain falls except near the sea. Indeed very few showers fall during the whole year. Owing to this, and the neighbourhood of the sandy deserts on the E. and on the NW., the heats are so violent, and the winds from those quarters so pernicious, that the houses are contrived so as to be occasionally ventilated by apertures on the top, resembling the funnels of small chimneys. The inland parts of Sind, produce salt-petre, sal-ammoniac, borax, bezoar, lapis-lazuli, and raw silk. They have also manufactures of cotton and silk of various kinds; and they make fine cabinets, inlaid with ivory, and finely lacquered. *Sinepuxen*, long, narrow bay, of the U. Smolensk, government of Russia, on the frontiers of Lithuania. After having been an object of contention, and reciprocally possessed by Poland and Russia, it was conquered by Alexay Michaelovitch in 1654, and ceded to Russia by the peace of Moscow, in 1664. It now forms one of the Russian governments.

Smolensk, city of Russia, capital of a government of the same name. It is situated on the Dnieper, and extends over two mountains, and the valley between them. Notwithstanding its extent, it contains only about 10,000 inhabitants, and has no manufactures, but carries on with Dantzic, Riga, and the Ukraine, a petty traffic in linen, hemp, honey, wax, leather, furs &c. It is 197 ms. NE. of Novogrodeck and 230 N. of Kiof. Lon. $32^{\circ} 34'$ E. lat. $54^{\circ} 50'$ N.

Smyrna, seaport of Asiatic Turkey, in Natolia, and one of the largest and richest cities of the Levant. The goodness of the harbour has caused it to be rebuilt several times, after having been destroyed by earthquakes. It is the rendezvous of merchants from almost all parts of the world, and the magazine of their merchandise. The Turks have 19 mosques, the Greeks two churches, the Jews eight synagogues, the Armenians one church, and the Latins three convents. There are three bishops, one Greek, the other Latin, and the third Armenian. Its pop. is computed at 120,000 persons. The streets are more open, better paved, and the houses better built, than in other towns on the continent. The street of the Franks is the finest in Smyrna, and lies all along the harbour. It is eight days journey from Constantinople by land, 25 days from Aleppo, by caravans, six from Cogni, seven from Cataya, and six from Satalia. The imports from Eng. consist of woollen cloths, camlets, lead, tin, and hardware; these are exchanged for cotton, coffee, mohair, drugs, galls, raisins, figs, &c. The English and Dutch factors have protestant chapels, and taverns are as open here as in Europe. The fortifications consist of a citadel, a castle, a mountain, and an old citadel. It is seated at the head of a large bay, 190 ms. SW. of Constantinople. Lon. $27^{\circ} 7'$ E. lat. $38^{\circ} 28'$ N.

Smyrna is called by the Turks Ismeer, and, as respects commerce, is the most considerable city of the Turkish empire, and notwithstanding the frequent calamities of plagues and earthquakes continues to increase, and is now (1810) supposed to contain 150,000 inhabitants. Previously to 1675, it had been partially destroyed six several times, by earthquakes. Another and most destructive calamity of this kind, attended with its usual consequence an extensive fire, occurred in 1688. Repeated shocks and also almost annual pestilence have been unable to counterbalance a convenient harbour, and a very productive adjacent territory. With such advantages and disadvantages, Smyrna has been the most frequented port of Asia Minor for upwards of two thousand years.

The city is built, partly on a hill, once called Pagus, whose summit is crowned by a castle and partly on a plain, extending to the N. & the eminence. The mercantile establishments have for more than two centuries, drawn together so many Franks to Smyrna, that the part of the town which lies along the edge of the water

to the northern extremity, has been long allotted to them and distinguished by the name of Frank street. Before the French revolution, the Frank part of Smyrna was playfully and not unjustly called *Petite Paris*; and yet with all the changes superinduced by war and national rivalry, Smyrna continues to be the most agreeable residence for Europeans in the Ottoman empire.

Though so high as N. lat. $38^{\circ} 30'$. The climate of Smyrna must be tropical in its effects on human beings accustomed to the air of the northern parts of Europe or the U.S. Figs, lemons, oranges and vines, are the common growth of the neighbourhood, productions which mark a mean temperature above 65° of Fahrenheit.

Society Isles, islands in the Pacific Ocean, discovered by Captain Cook in 1769, situated between $150^{\circ} 57'$ and $152^{\circ} 0'$ W. lon. and $16^{\circ} 10'$ and $16^{\circ} 55'$ S. lat. They are very numerous, but the principal islands are Otaheite, Huaheine, Ulitea, Otaha, Balabola, Mouroua, Toobaer, and Tabooyamanoo, or Saunder's island, which is here included, as being subject to Huaheine. The soil, the productions, the people, their language, religion, customs, and manners, are so nearly the same as of Otaheite, that little need be added here on that subject. Nature has been equally bountiful in uncultivated plenty, and the inhabitants are as luxurious, and as indolent.

Solfatara, lake of Italy, in the Campagna of Rome near Trivoli, which empties itself by a whitish muddy stream, into the Teverone, the ancient Anio; a vapour of a sulphureous smell arising from it as it flows. The waters of this lake had anciently a high medical reputation, but are no longer in esteem. In the middle are several floating islands, formed of matted serge and herbage, springing from a soil of dust and sand blown from the adjacent ground, and glued together by the bitumen which swims on the surface of the lake, and the sulphur with which its waters are impregnated. Some of these islands are 15 yards long, and will bear five or six people, who by a pole, may move to different parts of the lake. From this lake issues a whitish muddy stream, which emits vapour of a sulphureous smell, till it reaches the Teverone.

Solfaterra, mountain of Italy, in the kingdom of Naples, and Terra di Lavoro. This mountain appears evidently to have been a volcano in ancient times, and the soil is yet so hot, that the workmen employed there in making alum need nothing else besides the heat of the ground for evaporating their liquids. Sonneberg. See *Lauenberg*.

Sonora y Sinaloa, state of Mexico; bounded E. by the states of Chihuahua and Durango; SE. and S. by Jalisco; gulf of California W. and SW., and by the river Gila, and the native Indian regions of Apacheria N. Beside those limits, may be also included in Son. y Sinaloa, the very extensive, and almost unknown tracts drained by the Colorado and Buenaventura rivers as high as N. lat. 42° , or the line of demarcation between the U. S. and Mexico. Taken with such an extension, Sonora y Sinaloa reaches from lat. $22^{\circ} 40'$ to 42° N. or upwards of 19° of lat. Length from N. to S. 1340 ms., mean width about 200; area 268,000 sqms. The existing white and civilized pop. of this very extensive country amounts, it is most probable, to less than 200,000, or less than a single person to the sqm.

Sonora y Sinaloa, is in many respects a very interesting part of the habitable earth, as through it in all human probability will be followed in future ages, one of those commercial routes which influence the moral condition of nations; and from its central section there exists strong historical data to trace that civilization found native amongst the Americans, by their more warlike but less polished conquerors in the 16th century.

The principal rivers of this state, are the Hiaqui, Gila, Colorado, and the uncertain streams of Buenaventura, and Timpanogos. Under the head of *American Pyramids*, the reader will find a brief sketch of the massive ruins found on the Gila—ruins which attest former civilization; and under the head of *New Mexico*, it is shown that this civilization is not entirely extinct. The scarcity of rivers will retard the pop. of the tropical section, but in the temperate region of 33° this feature is reversed. Here at 57° W. from W. C. the junction of the Gila and Colorado is followed by the great opening of the American Red Sea, or Gulf of California. The Rio Colorado, rising in the central mountains of North America, on the same plateau from which flow the Rio Grande del Norte, the Muthomah, and the enormous western arms of the Mississippi, becomes a navigable stream at lat. 39° N. lon. W. C. 34° W. Continuing thence SW. by comparative courses 600 ms., it receives from the E. the Gila. The Californian Gulf, in geographical strictness, only the continuation of the Colorado. Consi-

tered as such, that fine river extends from the mouth of the Gila SSE. 800 ms., to where, between the Bay of Mazatlan and Cape Palmas, it is merged in the Pacific Ocean, at lat. 23° N.

It is impossible to view a map of North America, and carefully examine the course of its great rivers, without appreciating the prodigious commercial and political advantages of the Colorado route. By it, the Pacific Ocean is entered 23° of lat. farther S. than by the Columbia; and by the former, also, the ship channel is much deeper into the body of the continent than by the latter. An approximation towards the tropical regions of Polynesia, India, and China, decides the preference in favour of the southern route. In this great line of civilized intercourse, St. Louis, in the U. S., will, we may suppose, assume the rank of an immense entrepot, whilst another must arise on the side of the Pacific.

In its actual state, the pop. of Sonora y Sinaloa, is confined to the civilized inhabitants of the southern part, and to the native tribes of the northern sections. The former exhibit similar traits of character with other inhabitants of Mexico descended from Spanish colonists. "The Indians who live on the plains adjoining the Casas Grande of the Rio Gila," says Humboldt, "and who have never had the smallest communication with the inhabitants of Sonora, deserve by no means, the appellation of savages, (*Indios bravos*.) Their social civilization forms a singular contrast with the state of the savages who wander along the banks of the Missouri, and in Canada. The Spanish missionaries, and more recently American travellers, have found the tribes of these countries, clothed, residing in houses, and extensively engaged in agriculture and domestic manufactures.

Sonora y Sinaloa contains one city, Arispe. Sonora proper contains the villages of Sonora and Hostimuri. Sinaloa contains the villages of Culiacan, Sinaloa, el Rosario, el Fuerte, and los Alamos.

Arispe, the most northern large town of the state, stands near a small chain of mountains to the S. and W. of the presidios of Bacuachi and Bavispe. Pop. 7600. Lat. 30° 36' N. lon. W. C. 31° 50' W., upwards of 1000 ms. NNW. from the city of Mexico.

Sonora, the present capital of Sonora Proper, stands about 50 ms. S. from Arispe. Pop. 6400.

Hostimuri, is a mine town of considerable consequence, capital of a district of the same name, on the Gulf of California. Lat. 27° N.

Culiacan, celebrated in Mexican history, under the name of Hucicolhuican. Pop. 11,000.

Sinaloa, or Cinaloa, capital of the whole state, called otherwise, *Villa de san Felipe y Santiago*, E. from the port of Santa Maria d'Aome. Pop. 13,000. Lat. 25° 58' N. lon. W. C. 30° 52' W.

El Rosario, near the rich mine of Copala. It is situated near the southern extremity of the state, and very nearly under the tropic of Cancer. Pop. 6000.

Del Fuerte, or Montecarlos, on the river De la Fuerte, 70 or 80 ms. NNW. from Cinaloa, has a pop. of 8000.

Los Alamos, between the Rio del Fuerte, and the Rio Mayo, is a mine town, with a pop. of 8000.

The mines of Sonora y Sinaloa, are principally of gold. The chief washing of that precious metal, is in the large district of Pimeria Alta. "Fragments of pure gold," says Humboldt, "from 5 lb. 2 oz. 2 dr., to 8 lb. 0 oz. 4 dr. troy, have been found; but these washings are by no means diligently pursued, on account of the frequent incursions of the independent Indians, and especially on account of the high price of provisions, which must be brought from a great distance in this uncultivated country."

Soolon, island of the Eastern Ocean, situated SW. of Mindanao, almost midway between that island and Borneo. It is 30 ms. long, and 12 broad, and contains about 60,000 inhabitants; the natives are Malays, and Mahometans. The populousness of this little spot is caused by its advantageous situation, which renders it a great mart. The English East India company have a resident here. Lon. 121° 25' E. lat. 5° 58' N.

Sound, passage, or strait, lying between the island of Zealand, in Denmark, and the coast of Schonen, in Sweden, through which vessels pass from the ocean into the Baltic. On the Denmark side, stands the Elsinore, and the strong fortress of Cronenburg, near which is a tolerable good road; and on the side of Sweden, stands the town of Helsingburg, with only one old tower remaining of a demolished castle. The Danes take toll of all ships that pass through the strait, which is about 4 ms. over. See *Elsinore*.

The breadth of the Sound, from shore to shore, is about $1\frac{1}{2}$ ms., but the ship channel, immediately between Cronenburg and Helsingburg, is less than 1 mile, with 10 fathoms water. This depth increases to 18 fathom between the island of Huen, and Tegalgaard in Sweden. Between Huen and Landsrona, the depth is from 9 to 20 fathoms. Between Copenhagen and Malmo, in Sweden, the Sound is divided into three channels by the islands of Amag and Saltholm. The eastern and widest is along the Swedish coast. The Middle, or Casper channel stretches by Copenhagen, between Amag and Saltholm. Both merge into one SE. of Amag, with 4 fathoms water. This is the deepest outlet of the Baltic, about 10 ms. SE. from Copenhagen. The W. channel passes through Copenhagen, but with only $1\frac{1}{2}$ fathoms water.

Sour, or *Sur*, seaport of Turkey, in Asia, or Syria. Here stood the famous city of Tyre, of which there is now nothing remaining but ruins. Lon. $35^{\circ} 50'$ E. lat. $34^{\circ} 18'$ N. See *Tyre*.

Spa, town of the kingdom of the Netherlands, in Liege, famous for its mineral waters. It is situated on one end of a deep valley on the banks of a small rivulet, and is surrounded on all sides by high mountains. The sides of these mountains next to Spa are rude and uncultivated, presenting a rugged appearance as if shattered by the convulsions of earthquakes; but, as they are strewn with tall oaks and abundance of shrubs, the country around forms a wild, romantic, and beautiful landscape. Its only source of wealth is its mineral waters. The names of the five principal wells are Pouhon, Geronard, Savinere, Watpotz, and Tunnellet. The inhabitants are employed in making toys for strangers. Spa was taken by the French in 1794. It is seated in a valley, surrounded by mountains, 17 ms. SE. of Liege. Lon. 5° 50' E. lat. 50° 30' N.

Spain, kingdom of Europe, 700 ms. long and 300 broad, bounded on the N. by the Bay of Biscay, NE. by the Pyrenees, which separate it from France, E. and S. by the Mediterranean, SW. by the Atlantic, and W. by Portugal and the Atlantic. According to the ancient divi-

sions it contained the provinces of Old and New Castile, Andalusia, Arragon, Extremadura, Galicia, Leon, Catalonia, Granada, Valencia, Biscay, Asturias, Murcia, and Upper Navarre, some of which have been separate kingdoms. The principal rivers are the Douero, Tagus, Guadiana, Guadalquivir, and Ebro. The soil is fertile; but there are large tracts of uncultivated ground; and the superior attention paid to the large flocks of sheep, greatly impedes the progress of agriculture. The produce of the country is wheat, barley, saffron, honey, silk, salt, saltpetre, hemp, barilla, and even sugar-cane, with the richest and most delicious fruits that are to be found in France and Italy; and its wines are in high esteem.

Few countries have undergone more interesting revolutions than Spain, and the history of no nation is perhaps so instructive. After a recent, but abortive struggle, that naturally great nation has bowed to ecclesiastical and civil slavery, and presents a singular phenomenon; retrogradation amid general intellectual advance. If, however, the Spanish nation has declined in Europe, the American part has risen with gigantic force. Seven or eight independent Spanish nations now stand forth to sustain the majesty of their origin. It is amongst the rational subjects of anticipation to consider the Spanish nation as destined in future ages, to be amongst the most influential sections of the human species. Of all her once immense empire in every quarter of the earth, Spain still retains her European territories, some trifling places on the coast of Africa, the Canary Islands; Cuba and Porto Rico, with some other less valuable possessions in the West Indies; and in the Pacific Ocean the Philippine and Ladrone Islands.

The following table exhibits the subdivisions of Spain made by the Cortes, during the recent revolutionary struggle. I have retained it, as affording an estimate of the distributive pop. of that kingdom.

Springfield, pst. Hampden cy. Mass., on the E. bank of Connecticut river, 29 ms. SW. from Brookfield, and 24° N. by E. from Hartford. The pst. or village is the seat of justice for the cy., and stands on the bank of the Connecticut river, directly opposite the mouth of Westfield river, and contains the city buildings, a bank, three churches, and a considerable number of elegant private houses. In its vicinity are a very extensive paper manufactory, and a manufactory of hollow ware.

Here is also the site of the principal armory of the U. S. The arsenal is within the village, consisting of extensive buildings devoted to the various objects embraced by the establishment, and a hall devoted to public worship. The water works are placed on Mill river, about a mile S. from the arsenal, and are erected on three separate sites, upper, lower, and middle; containing five shops, 28 forges, 10 trip hammers, 18 water wheels, &c. presenting one of the most extensive assemblages of wheels, and other machinery put in motion by water, to be found in the U. S.

From 240 to 250 workmen are employed, who complete on an average, 45 muskets daily. So great is the water power at the disposal of the U. S., at this place, that the works may be increased to any assignable extent that the exigencies of the government may demand. Since its first formation, this armory has produced about 130,000 muskets and 1500 carbines; and nearly 50,000 muskets have been repaired. From 1795 to 1817, including the first cost, that of the whole establishment amounted to \$1,890,190.

Springfield is the seat of a very extensive commerce, and in the vicinity we have noticed only the most prominent of its manufacturing establishments. Opposite this village, the Connecticut river is crossed by a bridge 20 feet wide, and 1234 feet in length. Pop. 1820, 1812, in 1820, 3970.

 mities, having to the W the cities of Chester
 and Salop, to the E those of Derby and War-
 wick, and to the S Worcestershire. The rivers
 Dove and Trent form a natural boundary on
 the Derbyshire side, on the other sides it has
 no remarkable limits. The S extremity of the
 cty. is enlivened by various branches of the
 hardware manufacture, in which it participate
 with the neighbouring Birmingham. The trade
 of this cty. is in a peculiar manner assisted by
 the grand system of canal navigation, of which
 it is, as it were, the centre, and which is carried
 through its whole length. The *grand trunk*,
 as it has been ingeniously termed, enters the
 N. of the cty. from Cheshire, and after piercing
 Hagley hill, by a subterraneous passage of
 a mile and a half in length, passes through the
 potteries, and thence southward across the
 Trent almost to Litchfield, from whence it
 turns short over the Trent again, and over the
 Dove, in its way to mix with the Trent at Wil-
 den-ferry. From the neighbourhood of Staf-
 ford it sends off a branch which runs directly
 southwards by Finkridge, and near Wolver-
 hampton, to join the Severn near Kidderm-
 nster. With this canal from Birmingham, and
 another from Stonebridge communicate. These
 the great ports of Bristol, Liverpool, and Hull,
 are all accessible to the various products and
 manufactures of Staffordshire. The principal
 rivers are the Trent, Dove, Sow, Churner,
 Steur, Peak, and Mayfold. Pop. in 1801,
 239,153; in 1811, 293,153; and in 1831, 341,824.

Stockholm, the capital of Sweden, in a situation remarkable for its romantic scenery. This capital which is very long and irregular, occupies besides 2 peninsulas, 7 small rocky islands, seated on the Maeler, in the streams which issue from that lake, and in a bay of the Baltic. A variety of contrasted views are formed by numerous rocks of granite, rising boldly from the surface of the water, partly bare and craggy, and partly dotted with houses, or feathered with wood. The harbour is an inlet of the Baltic; the water is as clear as crystal, and of such depth, that ships of the largest burden can approach the quay, which is very large, and lined with spacious buildings. Towards the sea, about 2 or 3 ms. from the town, the harbour is contracted into a narrow strait, and winding among high rocks disappears from the sight; and the prospect is terminated by distant hills, overspread with forest. It is far beyond the power of words, or of the pencil, to delineate these singular views. The central island, from which the city derives its name, and the Riterholm, are the handsomest parts of the town. At the extremity of the harbour, several streets rise one above another, in the form of an amphitheatre; and the royal palace, a magnificent building, crowns the summit. Except in the suburbs, where several houses are of wood, painted red, the generality of the buildings are of brick. There are here an academy of sciences, and an arsenal. Stockholm is 200 ms. Sumatra, island in the Indian Ocean, the most western of the Sunda islands. Its general direction is nearly NW. and SE. The equator divides it into almost equal parts; the one extremity being in $5^{\circ} 33' N$, the other in $5^{\circ} 56' S$. lat., and Acheen Head, its N. extremity, is in lon. $95^{\circ} 34' N$. It is 950 ms. in length, and from 150 to 200 in breadth; separated from Malacca, by the strait of that name, and from Java, by the strait of Sunda. This island is surpassed by few in the beautiful indulgences of nature. A chain of mountains runs through its whole extent; the ranges, in many parts, being double and treble, yet their altitude is not sufficient to occasion their being covered with snow during any part of the year. Between these ridges are extensive plains, considerably elevated above the surface of the maritime lands. In these, the air is cool; and, from this advantage, they are esteemed the most eligible portion of the country, are the best inhabited, and the most cleared from

woods, which elsewhere, in general, cover both hills and valleys with an eternal shade. Here too are found many lakes and rivers, that facilitate the communication between the different parts. The inhabitants consist of Malays, Achenese, Battas, Lampoons, and Rejangs; the latter are taken as a standard of description, with respect to the person, manners, and customs of the Sumatrans. They are rather below the middle stature; their bulk in proportion; their limbs, for the most part, slight, but well-shaped, and particularly small at the wrists and ankles. Their hair is strong and of a shining black. Rice is the only grain that grows in the country. Here are sugar-canes, beans, peas, radishes, yams, potatoes, pumpkins, and several kinds of pot-herbs unknown to Europe; and also most of the fruits to be met with in other parts of the East Indies in the greatest perfection. Indigo, salt-petre, sulphur, arsenic, brasil wood, two species of the bread-fruit tree, pepper, cassia, camphire, benjamin, coffee, and cotton, are likewise the produce of this island. Here also are the cabbage tree and silk cotton tree; and the forests contain a great variety of valuable species of wood, as ebony, pine, sandal, eagle, or aloes, teak, manchineel, and iron wood, and also the banyan tree. Bees' wax is a commodity of great importance here; and there are likewise edible birds' nests. Gold, tin, iron, copper, and lead, are found in the country; and the former is as plentiful here as in any part of Asia. Sumatra is divided into many petty kingdoms, the chief of which are Acheen, Singapore, Palembang, and Jambi. The English and Dutch have factories on this island; the principal one of the former being Fort Marlborough, at Bencoolen.

Sumpterville, pstv. and seat of justice, Sumpter district, S. C., on the dividing ground between the two main branches of Black river, about 100 ms. a little W. of N. from Charleston. Lat. $33^{\circ} 53'$ N. lon. $2^{\circ} 56'$ W.

Sunapee, lake of N. H., on the western border of Hillsborough and eastern of Cheshire cty., discharging through Sugar river into Connecticut river. It is through this lake that a channel of water communication is designed to unite Merrimac and Connecticut rivers.

Sunari, district of Strid., in Argyllshire, in the peninsula at the NW. end of that cty. It is remarkable for numerous veins of lead, which however are not very productive.

Sunart Loch, Strid., an inlet of the sea, in Argyllshire, which divides the island of Mull from the district of Matven.

Sunbury, cty. of New Brunswick.

Sunbury, pst., borough, and seat of justice, Northumberland cty. Penn., on the E. side of Susquehanna river, 2 ms. below Northumberland, 56 N. of Harrisburg, and 164 NW. of Philadelphia. Pop. about 700.

Sunbury, pst. and port of entry, Liberty cty. Geo., lying on the S. side of N. Newport river, 45 ms. S. by E. of Savannah, in lat. $31^{\circ} 43'$ N. and lon. $81^{\circ} 18'$ W. The harbour is formed and defended from the weather by the interposition of Catherine Island, which lies off its entrance. An academy was erected here in 1788, which has become a very flourishing institution.

Sunbury, flourishing pst. in the eastern part of Delaware cty. Ohio. Pop. in 1820, 100.

Sunbury, pst. Gates cty. N. C., about 40 ms. SW. from Norfolk, Virg.

Sunk Island, island of Eng., within the mouth of the Humber, about 9 ms. in circuit, separated from Yorkshire by a channel, near 2 ms. broad.

Sunning, village of Eng., in Berkshire, situated on the Thames, 2 ms. NE. of Reading. It was once an episcopal see.

Sunning Hill, village of Eng., in Berkshire, in Windsor Forest. It is noted for its medicinal wells, which are efficacious in paralytic cases, and is 6 ms. SSW. of Windsor.

Sunda Islands, group in the Indian Ocean. This term is by Malt Brun supposed to be Sanscrit, and bearing so strong an analogy to words found in several European languages, signifying exactly the same meaning, affords one of the many coincidences in the original languages of the earth. The Sunda Islands are Borneo, Sumatra, and Java, with many of smaller size. Borneo and Sumatra are both crossed by

the equator. The whole group, however, extends from lat. 8° S. to 6° N.

Sunda, Straits of, separates Sumatra from Java. This great inlet from the Indian Ocean into the Chinese Sea lies in lat. $6^{\circ} 36'$ S. and lon. $105^{\circ} 15'$ E. from London.

Sunderbuds, or The Woods, a tract of country, consisting of that part of the Delta of the Ganges, in Hindoostan Proper, and in the southern, of Bengal, which borders on the sea. The Delta of the Ganges and Bramapootra united, is perhaps the most dreary, and, except by water, the most impenetrable, region of the earth. It is formed by innumerable creeks and rivers interlocking with each other, with intervening islands covered with a most dense forest, uninhabited except by wild beasts, or a solitary fakér of Makometan devotee. The navigation to Calcutta is by two passages, more than 200 ms. through a maze of forest and river scenery. At one time the channel is so narrow as to scarcely admit the passage of vessels, and again opening into a spacious basin. The whole surface is flat, and composed of alternate strata of sand and black mould, a recent alluvion. Some spots might be cultivated, whilst the greater part is liable to annual submersion; but the whole is claimed as public property, and serves to supply Calcutta with timber and fuel. The two Deltas of the Ganges and Mississippi are very nearly 180° asunder.

Sunderburg, town of Denmark, in the island of Alsén. It is seated on a strait called Sunderburg Sound, 12 ms. E. of Flensburg. Lon. 10° E. lat. $54^{\circ} 51'$ N.

Sunderpoo, or Melandy, fortified island and seaport of the Deccan, on the Concan coast, reduced by commodore James, in 1756. It is about 10 ms. NE. of Vingorla Rocks, and 36 NW. of Goa. Lon. $73^{\circ} 20'$ E. lat. $16^{\circ} 24'$ N.

Sunderland, pst. Bennington cty. Ver., 15 ms. NE. from Bennington. Pop. 1810, 575, in 1820, 600.

Sunderland, pst. Franklin cty. Mass., on the left bank of Connecticut river, 8 ms. below Greenfield. Pop. 1810, 551, in 1820, 597.

Sunderland, seaport of Eng., in the bishopric of Durham. It is a large and thriving town, which, for the exportation of coals, is next in consequence, this side of the kingdom, to Newcastle. Its port, on the mouth of the Wear, though improved from its former state, will not admit the largest ships. There are several glass-houses at Sunderland; and it also exports grindstones and other articles. It is 13 ms. NE. of Durham, and 264 N. by W. of London. Lon. $1^{\circ} 12'$ W. lat. $51^{\circ} 36'$ N.

Sunderwall, seaport of Sweden, in the province of Medelpadia. It carried on a trade in tar, bark of birch trees, deals and linen, and is seated near the Gulf of Bothnia. Lon. $18^{\circ} 5'$ E. lat. $62^{\circ} 45'$ N.

Sunfish, tp. Pike cty. Ohio. Pop. 1820, 502.

Sunneberg, or Sonneberg, town of Germany, in the circle of Saxony, and territory of Sternburg, with a castle, seated on the Darts, 50 ms. N. by N. of Berlin. Lon. $15^{\circ} 40'$ E. lat. $52^{\circ} 41'$ N.

Superior, lake of N. America. See *St. Lawrence basin*, and *St. Mary's Straits*.

Supino, ancient town of Naples, in Molise, with a castle. It is seated at the source of the Tamara, at the foot of the Appennines, 17 ms. N. by W. of Benevento.

Sur. See *Sour*.

Sura, town of Sweden, in the province of Westmanland.

Surat, city and seaport of the Deccan, of Hindoostan. It is said to have 200,000 inhabitants, and its trade is very considerable. Surat is situated on the confines of Guzerat, 20 ms. up the river Tapti, and 177 N. of Bombay. Lon. $72^{\circ} 48'$ E. lat. $21^{\circ} 40'$ N.

Sure, river of Ireland, in Tipperary, which flows into St. George's Channel.

Surghoja, town of the peninsula of Hindoostan, 160 ms. SSW. of Patna.

Surghville, pty. Hawkins cty. Tenn., by post. 240 ms. NE. by E. from Murfreesborough.

Surinam, country of S. America, in Guiana, extending 75 ms. along a river of the same name. It abounds with game, and singular animals of different kinds; the toad, in particular, being remarkable for its enormous size and ugly form. It produces fruits, indigo, sugar, cotton, tobacco, gums, and wood for dyeing. The woods are full of monkeys, and it is said, there are serpents 30 feet long. The capital is Paramaribo.

Surin, commercial town of Japan, in the island of Niphon, capital of a province of the same name, with a castle, where the emperors formerly resided. Lon. $139^{\circ} 3'$ E. lat. $39^{\circ} 30'$ N.

Surry, cty. of Eng., 37 ms. long, and 27 broad; bounded on the N. by Middlesex, on the E. by Kent, on the S. by Essex, and on the W. by Hampshire and Berks. It is in the diocese of Winchester; contains 13 hundreds, 11 market towns (including Southwark) and 140 parishes; and sends 14 members to parliament. The air is generally temperate and healthy. Surry has been compared to a piece of coarse cloth with a fine border; its circumference being in general fertile, but its middle parts barren. On the banks of the Thames, it has a range of beautiful meadows, interspersed with numerous villas and pleasure grounds. Pop. 1801, 269,043, in 1811, 325,551, in 1821, 398,658.

Surry, cty. N. C.

Surry, pst. Hancock cty. Maine, 18 ms. NE. from Castine. Pop. 1810, 360, in 1820, 428.

Surry, pst. Cheshire cty. N. H., 40 ms. SW. from Concord. Pop. 1810, 564, in 1820, 570.

Surry, cty. Virg.; bounded by James' river opposite Charles City cty. N., James' river opposite James City cty. NE., Isle of Wight SE., Sussex SW. and W., and Prince George NW. The NE. sources of Black River, branch of Nuttaway, rise in Surry. Lon. 22 ms., mean width 15; area 330 sqms. Chief town Cobham. Pop. 1820, 6594. N. lat. 37° , and the meridian of W. C. intersect in this cty.

Surry, cty. N. C.; bounded by Virg. N., Stokes cty. N. E., Rowan and Iredell S., and Wilkes and Ashe W. area 726 sqms. It is drained to the extreme north, sources of the Yadkin. Chief hills, and in part mountainous. Chief towns, Rockford and Montaville. Pop. 1820, 12,320. Ctl. lat. $36^{\circ} 16'$ N. lo. W. C. $3^{\circ} 44'$ W.

Surry, C. H. and pto., Surry cty. Virg., 64 ms. SE. by E. from Richmond.

Sursee, town of Switzerland, in the canton of Luzerne, near the lake of Sempach, 2 ms. S. from Luzerne.

Sursooty, town of Hindoostan Proper, 114 ms. NW. of Delhi.

Sus, river of Morocco, which forms the S. boundary of the empire of Morocco, and enters the Atlantic at Agadir. It fertilizes its banks by annual inundations.

Susa, seaport of Tunis. See *Soussa*.

Susp., strong town of Piedmont, capital of a marquisate of the same name. It is seated on the Doria, among pleasant mountains, and is called the key of Italy, being the principal passage out of France in Italy. It is 30 ms. NW. of Turin. Lon. $7^{\circ} 24' E.$ lat. $45^{\circ} 20' N.$

Susannah, village Clermont cty. Ohio, on Ohio river.

Susdal, town of Russia, in the government of Volodimir, capital of a duchy of the same name. It is built of wood, and seated on the Khama, 90 ms. NE. of Moscow. Lon. $40^{\circ} 25' E.$ lat. $56^{\circ} 26' N.$

Susquehanna, river of the U. S. This noble stream, from the caprice of geographical nomenclature, loses its name at its junction with tide waters, an error now beyond remedy.

Under the general head of the tributents of Chesapeake Bay, is included a basin of navigation, in form of an immense triangle, having 450 ms. base from the extreme northern sources of Mathomond river, lat. $38^{\circ} 40' N.$, to those of the Chesapeake branch of Susquehanna, lat. $42^{\circ} 50'$, and 250 ms. perpendicular from Cape Charles, lat. $37^{\circ} 50'$, from W. C. $1^{\circ} 10'$, to the extreme western sources of James' river, N. lat. $37^{\circ} 15'$, W. lon. from W. C. $3^{\circ} 20'$, with an area of 65,000 sq. ms. This is by far the most extensive and peculiar basin of the Atlantic slope of the U. S. The bay of Chesapeake penetrates it from N. to S. 175 ms. into the western side of this great bay, or rather gulf, flow a number of tributary branches, of which the principal are, James' river, York river, Rappahannock, Potomac, Patuxent, Patuxent, and Susquehanna.

The Susquehanna loses its name at the foot of its falls, at N. lat. $39^{\circ} 33'$, exactly $1^{\circ} E.$ from W. C. From its magnitude, and from the western origin of its sources, the Susquehanna seems to form a natural chain of water communication between the Atlantic Ocean and Ohio valley; and the curious fact, that all its great tributaries flow from the right and completely pierce the Appalachian chain, renders this communication more striking. If we turn our attention to the general physiognomy of the Susquehanna, we find the extreme northern sources at Madison cty. N. Y., within 16 ms. of Oneida lake, and 15 from the line of the Great Canal, and in the angle between the sources of the Mohawk and Seneca rivers. This is the Chenango river, afterwards augmented by the E. branch. The latter originates in the northern sources of the Catskills, in the angle between the head of the Senango branch of Delaware, the Chenango, and opposite to the Mohawk river, being within less than 10 ms. from the line of the Great Canal of

N. Y. The E. branch is correctly so called, as its sources are in fact the most eastern tributary waters of the Susquehanna. The E. branch and Chenango unite in Broome cty. in N. Y., the former having by an abrupt curve entered and retreated from Penn. Below their junction the united waters flow a little S. of W., and Tioga cty. in N. Y., and turning nearly S. into Bradford cty. in Penn., receive the Tioga branch from the NW., at Tioga Point.

The Tioga river rises in the angle between the sources of the Genesee and Seneca rivers, in Steuben, Alleghany, and Ontario cties. in N. Y., and within 36 ms. from the line of the Great Canal.

The general course of the Tioga river is from NW. to SE., by comparative courses about 80 ms. The general course of the Chenango proper, already noticed, is from NE. to SW., by comparative courses 120 ms.

What in a particular manner renders remarkable the two great northern constituents of the Susquehanna, is their enclosing the long and navigable lakes of Seneca and Cayuga, the latter stretching in an almost direct line from the Great Canal to within 20 ms. of the Tioga river, at the mouth of the Newtown creek, about 20 ms. by comparative courses above Tioga Point; and the latter, or Cayuga, stretching also from the line of the Great Canal, to within 30 ms. from the Susquehanna, at the mouth of the Oswego, about 20 ms. above Tioga Point. Nature, in this section of country seems to have advanced half-way, to aid the efforts of man in forming channels of communication between the basins of the Susquehanna and St. Lawrence. The two fine lakes of Seneca and Cayuga, are each respectively upwards of 35 ms. in length, and occupying the angle between the two main northern constituents of the Susquehanna, would appear to have been placed in their actual position as if to give in their utmost extent the greatest navigable facility.

From the Tioga Point, the Susquehanna flows by comparative courses 60 ms. to the mouth of the Lawhannock creek, in the county of Luzerne cty. In this course, the river flows nearly due S., 10 ms. to the eastern, and correctly, northwestern verge of the Appalachian mountains. Hitherto, the entire waters of this stream have originated in the NW. of the Appalachian chain, and in the secondary formation. At the mouth of the Towanda and Wysaukin creeks, the river curves to SE., and enters the mountains, at right angles to their general range. Continuing about 10 ms. still farther upon the secondary, the river enters on the great central transition formation, near the mouth of the Tunkhannock, where it passes the main ridge of the Appalachian chain, and issues into the fine valley of Wyoming, across which it maintains a SE. course to the mouth of Lawhannock. Here the now noble stream of the Susquehanna again turns at nearly right angles, and flows down the remarkable Wyoming valley, by comparative courses 70 ms., to its junction with the W. branch at Northumberland and Sunbury.

The W. branch rises entirely in Penn., and

within the Appalachian valleys, though upon the secondary formation. Its general course is nearly from W. to E., by comparative courses 150 ms., to where it passes the main ridge of the Appalachian chain, and enters on the transition formation, 20 ms. below Williamsport. Here the river pierces the mountain, flows into the great valley, and turning to nearly due S. flows, to its junction with the Susquehanna.

Below the mouth of the W. Branch, the Susquehanna pursues a general direction, a little W. of S., 40 ms. to the mouth of the Juniata. The latter is literally a mountain stream, and has its whole valley on the central transition formation. Its general course is nearly from W. to E., parallel to the W. Branch. Similar to the other secondary rivers of the basin of the Susquehanna, the Juniata traverses the Appalachian ridges in several places, and flows in either a parallel direction, or at right angles to those ridges.

Below the mouth of Juniata, the Susquehanna assumes a SE. direction of 80 ms., by comparative courses, and being precipitated from the primitive on the sea and formation, loses its name and rank as a river in Chesapeake Bay.

Between the head of the latter bay, and the mouth of the Juniata, the Susquehanna passes three mountain ridges: the Kittatinny above, and the Blue ridges below Harrisburgh, and what may correctly be called the SE. Mountain, below the mouth of the Conestogo and Pequea creeks.

The valley of the Susquehanna proper, presents an area of inland navigation of about 20,000 sqms.

If we turn our eye to the whole basin of the Susquehanna, and consider it geographically, we have before us a mighty link, which connects the three great river systems of N. America, those of the Gulf of Mexico, St. Lawrence, and Atlantic Ocean proper. The natural facilities it presents to channels of inland navigation will be shown in the sequel, with the relative elevation of its mountain valleys, and the obstructions opposed to artificial water routes.

If we examine this basin geologically, we find its general physiognomy, in a very remarkable manner, commanding our attention. We have in this basin all the formations which the world affords, from the highest class of primitive rocks, to the most recent alluvion. And we have all those formations on an immense scale. But the circumstance arising out of this geological structure, most worthy of our attentive observation, is, that the courses of the waters, or their fitness or unfitness for navigation, appears to be totally independent of the rock formations. It appears, also, that although the mere windings of the streams are influenced by the mountain ridges, that their general courses towards the recipient, into which the waters are discharged, have no dependence upon either the mountains or rock formation. The latter character the Susquehanna basin partakes in common with its three contiguous Atlantic basins, those of Roanoke, Delaware, and Hudson.

These important facts prove how little

we are advanced in a correct view of any of these basins, in a navigable point of view, by the most minute knowledge of the relative position of the mountains, the extent and relative position of the different formations, or, more, that of the courses of the rivers themselves. Falls, in the proper sense of the term, are rare in any of the Atlantic rivers. What are usually denominated falls are in reality rapids, but those, in respect to either their position or magnitude, have but an incidental connexion with the mountain ridges. In most instances, where the rivers do pass the mountains, rapids occur; but this coincidence is by no means universal. The rivers, in number of the mountain gaps, present an intervening smooth sheet of water. This is remarkably the case with the Juniata, below Bedford, and with the Lehigh, at its passage through the Kittatinny range. The real fall of the water in its descent from the mountain valleys to the level of the tides, can in no instance be even tolerably correctly estimated by a comparison with its course through the mountains. Every stream, to be well understood, must be surveyed separately, and considered as a body in itself.

Before quitting the general review of the basin of the Susquehanna, we may remark, that the main volume of that river, from its source to the bay, receives all its large tributary streams from the right, and serves as a common recipient lying along the base of an inclined plain, extending from the 37th to the 42d deg. of N. lat. It will be seen by inspection, that this feature is also prominent in the physiognomy of the Potomac, Delaware, and the Hudson. See James' river, York river, Rappahannock, Potomac, Patuxent, Palapoco, and Pennsylvania.

The subjoined extracts are taken from the resolves of a meeting at Wilkesbarre, Nov. 4th, 1822.

"Whereas the complete and unobstructed navigation of the river Susquehanna is wished for by every friend to the prosperity of the commonwealth, and is calculated to advance the immediate and lasting interests of all who inhabit its borders and the borders of its tributary streams, and whereas a convenient, cheap, and safe market at all seasons throughout its channel, would, in our opinion, put an end to pecuniary suffering in the midst of abundance, and to the great depression of property surrounded with unavailing sources of wealth. We feel it incumbent upon us to endeavour to impress on the public mind the importance of the object, and through the public voice to call upon the representatives of the people to take measures for effecting the proposed necessary improvements in the channel of this noble river.

"A single glance at the map of Pennsylvania is sufficient to convince the most unbelieving, and a more thorough examination of the vast tract of country watered by this river and its branches, will strike the reflecting mind with astonishment, that our state has not yet called into action those great agricultural manufacturing, and commercial advantages which its improvement would inevitably produce. That these advantages cannot well be overrated is evident, if we will but take the trouble to trace on the maps the sources of the Susquehanna,

and its numerous branches, and examine into the nature and resources of the country which they water, in all their various windings.

"This territory (that drained by the Susquehanna proper) may be emphatically called the heart of Pennsylvania. It furnishes a greater surplus of grain than all the rest of the state together; it furnishes besides four fifths of all the lumber which finds its way to the Baltimore market, and much of that sent to Philadelphia. Its ores are abundant, and already manufactures more iron than any other district in the state, and the quantity can be increased to any amount. Its mountains abound in stone coal of the best quality; this article is found on the Juniata, on the west branch, and the cty. of Luzerne alone, could were the Susquehanna made easy of navigation, furnish a sufficient supply for all the cities and towns in the Atlantic sea board. Bradford cty. has extensive mines of bituminous coal, and Susquehanna has her salt springs. In short, the more we examine into the nature and extent of our resources, the more we are astonished at our supineness and neglect.

"The cities of Scranton, Tioga, Otsego, Broome, and part of Delaware, in the state of New York, are also dependent upon this river, for an outlet for the produce of their labour, and are anxious for its improvement.

"The country embraced by the Susquehanna and its waters, contains about 22,000 sqms., or about fourteen millions of acres, producing, or capable of producing all the materials for the manufacture of iron, steel, cutlery, glass, stone ware, earthen ware, queensware, cabinet ware, cloths of wool, cotton, and flax, and all their variety, cordage, spirits, malt liquors, in short, every article which is necessary for the comfort and convenience of man. The whole of this country is well calculated for the growing of grain and pulse of all kinds, common to temperate latitudes; raising of cattle, sheep, swine, poultry, and consequently of beef, pork, butter, cheese, feathers; and is well stocked, more particularly along the northern side of the state for about 60 or 70 miles in width, with timber of the best quality for boards, scantling, masts and spars for our shipping, and lumber for every description of building.

"To the merchant then we say, open to us the safe navigation of the Susquehanna, and we will throw into your hands the products of our mines, our forests, and our soil, property to the amount of from three to five millions of dollars, annually. This property you can turn to your own profit as well as ours, and, in return, we will receive such commodities as will suit your condition and our wants. The benefit will be reciprocal—the interest mutual—the object patriotic—the times favourable for its completion—let us no longer hesitate.

"To the manufacturer we say, open the navigation of the river, and you obtain at a cheaper rate the raw materials for carrying on your various occupations to the greatest advantage. Shall we remain tributary to Sweden and Sweden for iron and steel, when our mountains are filled with the richest of ore? Shall we be dependent upon Europe and Asia for the clothes we wear, when we can furnish you with the wool, the flax, the hemp, the water power, and all the

materials for carrying on your business with profit to yourselves, to us, and with advantage to your country.

"To the farmer we say, shall our agricultural industry remain unrewarded and circumscribed? Shall millions of acres of the finest land, covered with timber of the best quality, and containing within its bosom, mines of iron, copper, lead, coal, marble in abundance, continue mere solitary wilderness, and an exhausting encumbrance to the proprietors?"

Susquehanna, pstv. Broome cty. N. Y. Susquehanna, cty. of Penn., bounded by Broome cty. N. Y. N., Wayne cty. Penn. E., Luzerne S., and Bradford W. Length 34 ms., width 23; area 800 sqms. Surface hilly, and soil generally of middling quality.

The local features of this cty. are very peculiar. The Susquehanna river enters and again retires from its northern border; and thence, after an immense sweep, through Broome and Tioga cities, N. Y., and Bradford cty. Penn., it again reaches in the NW. angle of Luzerne, within less than 5 ms. from the SW. angle of Susquehanna. From this singular position, the creeks of the latter cty. flow from its centre like radii of a circle, and yet nearly all enter Susquehanna river. Chief town of this cty., Montrose. Pop. 1820, 9960. Ctl. lat. 41° 50' N. lon. W. C. 1° 10' E.

Sussex, cty. of Eng., 70 ms. in length, and 28 where broadest; bounded on the N. by Surry, on the NE. and E. by Kent, on the S. by the English channel, and on the W. by Hampshire. The N. part of Sussex, a tract continued from the Weald of Kent, and of the same nature with it, was formerly entirely covered with forests; and though many of these have been cut down, it is still well furnished with timber both of large and small growth. The middle line of the cty. is a rich tract of arable and meadow. To it succeed the Downs, a range of green open hills of a chalky soil. Toward the sea, the land in general declines, and in some parts is marshy. This cty. was formerly famous for iron works, in which great quantities of charcoal were used for smelting the ore, and thus the woods came to be gradually wasted. The works are now almost, or entirely abandoned, this business, from the late improvements made in smelting iron with pit-coal, having been removed to the cities, which abound in that cheaper article, as well as in iron ore. The products for which Sussex is at present distinguished, are chiefly corn, hops, wool, cattle, and timber. It is not distinguished for any manufactures but that of gunpowder at Battel, and of needles at Chichester. The principal rivers are the Arun, Adur, Ouse, and Rother. Chichester is the capital. Pop 1801, 159,311, in 1811, 190,083, and in 1821, 232,927.

• Sussex, NW. cty. of N. J., bounded by Delaware river opposite Pike cty. Penn. NW., by Orange cty. N. Y. NE., Bergen and Morris N. J. SE., and Warren SW. Length 25 ms., mean width 18; area 450 sqms. It is generally hilly, and in part mountainous, though in the NE. section, the flat and marshy bottoms of the Watchkill cover a very considerable space. From superior elevation, the climate of Sussex differs more from that of the immediately adjacent

ities, of Morris and Bergen, than could be expected from difference of lat. The extreme eastern sources of the Passaic are in this city. From it also flow SW. towards the Delaware, the Musconcong, Peququet, Flatkill, and Pawling creeks, and those of the Wallkill NW. towards the Hudson. It is a city of great variety of soil, from very barren mountain, to the most fertile alluvion. The valleys of some of the creeks, particularly those flowing towards the Delaware, afford very fine meadow, orchard, and grain land. Pop. 1830, was included in the city of Sussex, as it then extended, including what is now (1836) Warren city. The area, now in Sussex, it is probable, then (1820) contained about 16,000, as the population of the whole city was 32,752. Ctl. lat. $41^{\circ} 18' N.$ lon. $74^{\circ} 5' E.$

Sussex, southern city of Del., bounded by Delaware bay NE., Atlantic Ocean E., Worcester city, Md. S., Somerset city, Md. SW., Dorchester and Caroline cities, Md. W., and Kent city, Del. N. Length 22 ms. mean width 30; area 960 sqs. Surface generally level, and in part marshy. Soil sandy in part, and of middling quality. Its waters flow from its centre in opposite directions; Nanticoke drains its western side. Pocomoke river has its source near its southern limits; Indian river, interlocking sources with both the preceding, flows into the Atlantic Ocean; and Cold Spring, Broadkill, Prunetook, Slaughter, Cedar, and Missipian creeks, enter the bay of Delaware. It is bounded on the N. and part of the W. by the Northern shire, on the SW. by Ross shire, on the S. and E. by the Frith of Dornock, and on the E. by Angus shire. It is about 50 ms. long from N. to S., and 46 in its broadest part from E. to W., terminating at the S. to not more than 12 is broad. It is mountainous, but the valleys are fertile, abounding with black cattle and sheep. Dornock is the city town. Pop. 801, 23,117, in 1811, 23,629, and in 1821, 23,840.

Sweden, kingdom of Europe, extending 800 ms. from N. to S. and 450 from E. to W., bounded on the N. by the Arctic Ocean, E. by Russia, S. by the Gulf of Finland and the Baltic, and W. by the Sound, the Cattegat and Norway. It is divided into four general parts: Sweden Proper, Gothland, Nordland, and Lapland; and each of these is subdivided into provinces. Sweden Proper contains Uppland, Sudermania, Nerik, Westmanlia, and Dalecarlia. Gothland contains East Gothland, Smoland, West Gothland, Vermland, Bahus, Dalia, Bohonen, Halland, Blekingen, and the isles of Gothland and Oeland. Nordland includes Gestricks, Helsingia, Medelpadia, Lemptia, Angermania, and West Bothnia. Sweden, Lapland comprises Uma, Pitia, Lulea, Norrbotten, and Lemi; these have no towns, and take their names from rivers that rise near the borders of Norway and flow into the gulf of Bothnia. The greater part of Finland, was ceded to Russia in 1808; and in 1814, Norway was ceded to Sweden, with three million of inhabitants. The whole monarchy now contains 350,000 sqms., with a pop. of about 1,500,000. It extends from lat. 59 to 70° N. The whole country is well watered by rivers, though not a single navigable one worth mention. Numerous lakes, and inland pieces of water on the banks of which the pastures and fields are usually better. At Stockholm, spring and autumn are scarcely to be perceived; in winter, continues nine months, and summer, during the remaining three, is rather the cold, excessive, and insupportable heat is considerable, the air being so pure that it is said Sweden produces crystals, amethysts, topazes, porphyry, lapis lazuli, agate, cornelian, marble, and other fossils. The chief wealth of the country, however, arises from her mines of silver, copper, lead, and iron. The last mentioned metal employs no fewer than 450 forges, hammering-mills, and smelting-houses. The first gallery of one silver mine is 100 fathoms below the surface of the earth; the roof is supported by propitious oaken beams, and from thence the miners descend about 40 fathoms to the lowest vein. The articles of export are boards, gunpowder, leather, iron, copper, tallow, skins, pitch, rosin, and masts; and imports are, brandy, wine, linen, cloth, stuffs, tobacco, sugar, spice, and paper.

Switzerland, country of Europe, bounded on the N. by Russia, E. by Tyrol, S. by Savoy, Italy, and W. by France. It is 220 ms. long and 130 broad. Switzerland was divided into 13 cantons, exclusive of their allies and bailiwicks; namely, Lucern, Uri, Schwitz, Unterwalden, Zug, Friburg, Solcun, Zurich, Bern, Basel, Schaffhausen, Glarus, and Appenzel. The first seven are Catholics, the next four are Calvinists, and the other two contain both religions. There are four passages over the Alps into Italy from Switzerland; the first is beyond the lake of Geneva, over Mount Cenis, which leads to Savoy; the second begins in the country of the Grisons, crosses Mount St. Bernard, and leads to the valley of Aosta, in Piedmont; the third begins in the country of the Grisons, crosses Mount Simpleberg, and leads to the duchy of Milan; the fourth crosses Mount St. Gothard, and the bailiwicks of Italy, and terminates in the Milanese. The principal lakes are those of Constance, Geneva, Lugern, Zurich, and Neuchatel. The most considerable rivers, are the Rhine, Rhone, Aar, Arve, Reuss, and Limme. Switzerland exceeds every country in the world, in diversity of appearance: the vast chain of Alps, with enormous precipices, extensive regions of perpetual snow, and glaciers that resemble seas of ice, are contrasted by the vineyard and cultivated field, the richly wooded brow, and the verdant valley, with its crystal stream. Agriculture cannot, of course, be carried to great extent, but the grain produced is sufficient for domestic consumption. The chief riches consist of excellent pastures, in which many cattle are bred and fattened, and the goats and chamois, feed on the mountains and in the woods. The men are generally strong and robust, for which reason, they are preferred by several nations, for the military service. The women are tolerably handsome, have many good qualities, and are in general very industrious. The peasants retain the old manner of dress, and are content to live upon milk, butter, and cheese, and these some of the mountaineers, who never have bread. In 1797, the partisans of France, exciting disturbances in Switzerland, the French entered the country; and, after defeating the troops and peasants who opposed them, in several battles, they abolished the constitutions of the principal cantons, erected what was termed the Helvetic republic, and vested the government in two councils and a directory. This constitution was abolished, in 1802, by the first consul of France, and another was presented for their acceptance, but rejected, and he offered them a new one, in 1803, which they consented to accept. By the new constitution, exclusive of the territories of Valais and Neuchatel, the country is divided into 19 cantons: the six new ones are, Pays de Vaud, Tesin, Argau, Grisons, St. Gall, and Thurgau; of which, the first two are Catholics, and the other four contain both Catholics and Protestants. Each canton has its distinct internal government.

The general government of the country is by a diet, composed of a member from each canton, which assemblies annually in June, at Friburg, Bern, Soleure, Basil, Zurich, or Lucern, in rotation; and the president is styled Landamman of Switzerland. The diet declares war, concludes peace, makes alliances with foreign states, and also decides on all treaties on commerce. The armed force is fixed at 30,000 men. In December, 1813, the allied armies traversed this country, for the purpose of invading France, when some partial changes again took place, in the administration of Switzerland, which was the cause of violent commotions amongst several of the cantons; but in 1814, on the meeting of the diet, these disturbances were appeased, and a federal compact was signed on the 8th of September, by the deputies of all the 19 cantons, at Zurich.

Syracuse, fine flourishing city, Onondago cty. N. Y., 10 ms. N. W. by W. from Manlius square, and 25 N. E. by E. from Auburn. Syracuse starts on the Erie canal, at the point where the Salina side canal leaves the main trunk. The Salina flats extend between Syracuse and the village of Salina. In a state of nature, these flats are low, in part marshy, and subject to annual inundation, but extensive drains have been formed, in order to dry the surface, which is an exuberantly rich alluvial deposit. The outlet of Salina lake, into Seneca river, being artificially lowered several feet, contributes also to desiccate the flats. Upon the open space between Syracuse and Salina, numerous platforms, or rather shallow cisterns, have been erected, in order to make salt by solar evaporation. When I visited these two villages, in July 1823, the draining operations, and the preparatory works for making salt, as well as the stupendous locks in the side canal, were all in a state of forwardness, and all evinced a most prosperous state of society, in that part of N. Y. The side canal of Salina, is carried by a series of locks, from the main trunk, down to the level of the Salina lake, thus opening an aquatic communication past Salina, from the Erie canal to Seneca river.

Syria, or *Suristan*, province of Turkey, in Asia, bounded on the N. by Diarbeck and N. tolia, on the E. by Diarbeck and the borders of Arabia, on the S. by the same deserts and Judea, and on the W. by the Mediterranean. Under the general name of Syria, were included the ancient Phœnicia, lying S. of Syria Proper. This province abounds in oil, corn, and several sorts of fruits, as well as peas, beans, and all kinds of pulse and garden stuff, but it would produce much more than it does, if it were well cultivated; for there are fine plains and pastures. The inhabitants have a trade in silk, camels, and salt. Damascus is the capital.

Tagus, river which has its source in the confines of Aragon, in Spain, runs through New Castile, by Toledo and Talavera, whence it proceeds to Alcantara, in Estremadura; when entering Portugal, it washes Santarem, below which it forms the harbour of Lisbon, and then falls into the Atlantic Ocean. This river was formerly famous for its golden sands, and is called Tejo, by the Portuguese. The basin of the Tagus is about 400 ms. long, from E. to W., with a mean width of 60; area 24,000 sqms. It is the largest stream of the Spanish peninsula; but like all the rivers of that elevated plateau, not navigable for sea vessels to a distance inland in comparison with length of course. The Tagus, at its mouth forms in the harbour of Lisbon, one of the finest havens on earth, but the tides do not rise more than about 30 ms. from the Atlantic Ocean. This river falls from the high table land of Aragon and Castile to its efflux into the Atlantic tides, upwards of 1800 feet.

Tallahassee, port and seat of government for Florida, is situated on Tugabona or Wackahulla river. Lat. $30^{\circ} 27' N.$ lon. W. C. $7^{\circ} 13' W.$ The following account of Tallahassee is mostly extracted from the Alexandria (D. C.) Gazette, of April 11, 1826. The notice of Tallahassee is thus printed in the gazette. "It is from the pen of a gentleman, whose statements are entitled to implicit confidence, and whose opportunities of correct information have been ample."

"The city of Tallahassee (for so it is called in the charter, perhaps in reference to its anticipated greatness,) is beautifully situated on an elevation, commanding a fine view of the surrounding country. It is yet in an infant state, the first house having been built only about 18 months ago; it, however, has at present, a number of good houses, and contains from 5 to 700 inhabitants; it is rapidly increasing in population, as is also the adjacent country."

The society of Tallahassee and neighbourhood, is yet small in number, but characterized by sociability and a refinement and elegance of manners not unexpressed in any city. The society around Tallahassee, in almost every direction, from the variety of hill and dale and crystal lakes, is extremely beautiful and romantic; and when the hand of art has seconded nature, it will bear a comparison with any other country. The lakes abound with fish of the most delicious flavour, and the large extent of country, which will never be cultivated, will always afford a variety of game. In a few years, the orange, the fig, and numerous other fruits, will be added to the sum of domestic luxuries; nor are the roads to be left out of the class of comforts; they are almost always excellent; the hills are seldom abrupt, and from the nature of the soil, the roads are dry in 24 hours after the longest rains; they are never dusty.

The climate is delightful; the thermometer seldom rises above 95° . The 1st of March, it rose to 85° in the shade, but the atmosphere was so moderated by the sea-breeze, that it would not have been supposed to be above 60° . The woods, at that time, were fragrant with the

perfume of a thousand flowers, and had the English bard ever visited those regions, he might have exclaimed with great truth,

Here smiling Spring her earliest visit pays,
And parting Summer's lingering bloom delays.

From Savannah, the average voyage in the packets, is 5 days to Norfolk and 6 to Baltimore, making together not more than 10 days from Tallahassee to Washington; little more than the same time will be required to go overland by Lynchburgh and Milledgeville. Steamboats run from Wheeling to Orleans in 8 days, and from the latter place in 3 to 4 days more to St. Marks, within 20 ms. of Tallahassee, making, by that route, only 14 or 15 days from Washington. A good road has been recently opened from St. Augustine to Pensacola, through Tallahassee, and another from Hartford, Geo., through the same place to St. Marks, the seaport of this section of Florida. The navigation up to St. Marks, situated about 6 ms. from the Apalache Bay, is, at present, obstructed by beds of oyster shells, and vessels drawing more than 7 feet water cannot reach the port; but for a small expense, the channel can be deepened to 10 feet, it will then admit vessels large enough for all commercial purposes in that section of country. Its situation is advantageous for a limited commerce, as the distance from that place to the Atlantic by water, when the contemplated canal across the peninsula shall have been completed, will be about 200 ms.; a vessel will run from St. Marks to New-Orleans in from 3 to 4 days, and about the same time from St. Marks to the island of Cuba.

Tallahassee was selected, by the governor and commissioners of Florida, as the site of the metropolis, on account of its central position, fertility of soil, and the reputation it had acquired, in the estimation of the Indians, for health and purity of air. The location was confirmed by the legislative council, on the 12th of December, 1824.

The precincts of the town encircle a tract of beautifully undulating country, elevated near 400 feet above tide water. It has been made an incorporate city. Pop. 1826, about 1200.

The soil around this new city is a mixture of loam, sand, and clay. High land growth, principally oak, hickory, and pine; in moist low lands, beech, wild cherry, ash, gum, magnolia, magnogany, and dogwood. The country abounds in springs of good water, and by sinking wells at moderate distance, that element can be obtained in almost any desired situation.

From what I know of the climate of Lou. and Flor., I should consider that of the country adjacent to Tallahassee, as very near a mean between the temperature of New-Orleans and St. Augustine. It will be seen, by reference to several articles in this treatise, that cold increases along a given line of lat. westward from the Atlantic coast.

Tallahassee is 220 ms. E. from Pensacola, 213 N.W. by W. from St. Augustine, and 232 a little W. of S. from Milledgeville.

Tallano, seaport of Corsica, situated on the gulf of Tallano, 30 ms. S.W. of Cortes. Lon. 9° 18' E. lat. 51° 20' N.

Tartars, or more correctly **Tatars**, a very widely disseminated nation of Europe and Asia. In our common geographical works, and in some treatises of more precision, the term Tartar has received an absurd latitude, and is made to comprise nations having neither language, manners, or personal appearance in common with the Tartars. "The Tartars," says Malte Brun, "differ as much from the Mongols, in their features, physical constitution, and language, as the Moors do from the Negroes. A slender figure, an European visage, though somewhat yellow in complexion, curled hair, and a long beard, distinguish the Tartar, from the squat, shapeless monster, with a flat nose, prominent cheeks, almost beardless chin, and lank hair, who inhabits the deserts of Mongolia. The countries of these two races of men, constitute two distinct physical regions. The Mongols, of whom the Kalmucs are a branch, occupy all the central plateau of Asia, from the Heloor mountains and lake Palcati, to the great wall of China, and to the Siolki mountains, which separate them from the Mantchoos, a tribe of the great race of the Tonggooses. The Tartars are the possessors of that extensive country, which lies between the Heloor mountains on one side, and the lake Aral and the Caspian Sea on the other." See **Turks**; as also Abkhas, Circassia, Crimea, Cosacks, Georgia, Imeritia, Kalmucks, Kisti, Lesguis, Mandshurs, Mingrelia, Monguls, Somovedes, Turcomans, and Ushecs.

Tartary, country of Asia. The term Tartary, if ethnographically considered, that is, if so extended as to include all places inhabited by Tartars, would comprise the immense regions between Afghanistan and Russia, and the south-eastern parts of the latter, with a large space on the Oby; but the independent Tartar nations, are limited to the physical region, bounded on the N. by the Aigdyur-shala mountains, or the course of the Irtysh; on the W. by the course of the Ural river, and Caspian sea; on the S. by Khorasin and the Gaoor mountains (the ancient Paropamisus;) and on E. by the chain of Beloor. Thus restricted,

Independent Tartary extends over 460,000 sqms. The pop. over this wide space, is generally pastoral, and does not, it is probable, amount to 6,000,000. It extends in lat. from 38° to 50° N.

Tartus, town of France, in the department of Landes, and late province of Gascony. The Midouze runs through it; and on one side of this river it rises in the form of an amphitheatre; the other is seated on a plain. It is 12 ms. NE. of Dax. Lon. 0° 48' E. lat. 43° 50' N.

Taurus, general name of that immense Asiatic chain of mountains stretching from the Dardanelles to India. This great physical feature rises gradually from the Archipelago, and winding through Asia Minor, rises into a vast table land in Armenia. Caucasus branches from it, and extending N. between the Euxine and Caspian, is finally merged in the plains of the Don and Wolga. Persia seems, like Armenia, to be an elevated table land, having Taurus as a base. This chain in many places, rises to the region of perpetual snow, evincing an elevation from 9 to 10,000 feet. It is probable, that the most elevated mountains of Europe, are equalled, if not excelled, in height by many peaks of Taurus. In all its extent, from the Dardanelles, to the Hindu Coosh, the Taurus chain stretches in unequal, but unbroken links, upwards of 3000 ms. It is, however, only an embranchment of the still more considerable system of central Asia. From northern Indostan, mountain chains extend in various directions, one of which gigantic arms is Mount Taurus. See *Caucasus*.

Taus, town of Bohemia, in the circle of Pilsen, 26 ms. SW. of Pilsen, and 50 S. of Saatz. Lon. $13^{\circ} 45'$ E. Lat. $49^{\circ} 25'$ N.

Tchad, lake of a newly discovered body of water in the interior of Africa. In the Nat. Int. of the 1st Aug. 1826, it is stated, that Major Denham, and his co-travellers, have reached and examined an immense lake in Africa, 2000 ms. long and 150 broad. The location of this lake is given at lat. 13° N. and lon. E. from London 16° "It occupies" says the notice in the Int. "the precise position of Wangara, as laid down in A. Brown's map; in which swamp the Joliba or Niger is supposed to terminate. It covers a surface about as large, as the two American Lakes, Erie, and Ontario, both together."

The existence of any such lake, with even the limited extent of Erie and Ontario, is at least doubtful, and with a length of 2000 ms. utterly irreconcilable with what we actually know of central Africa. Much of that continent, it is true, is defectively known, but sufficient discovery has been made, to render it extremely improbable, that it contains an inland sea, more than double the length of the Caspian. The united lengths of lakes, Erie and Ontario is about 450 ms. with a mean width of 60 at most. The entire water surface of all the great lakes of Canada, taken together; is about 100,000 sqms. Lake Tchad, according to the dimensions given from Major Denham, would cover 300,000 sqms., and equal one half the area of the Mediterranean. Such a sheet of water would so far surpass the combined superficies of lakes Erie and Ontario, that it would reach from the mouth to the utmost sources of St. Lawrence, and equal three-fifths of the entire basin of that great river. A distance of of 2000 ms. from the geographical point noticed in this article, would reach either the Atlantic Ocean, the Mediterranean, the Red Sea, or approach the Indian Ocean. See *Wangara*.

Tchuing-tcha, city of China, capital of the S. part of Hou-kiang. It is seated on the river Heng, which has a communication with an extensive lake, called Tong-ting-hou, 740 ms. S. by W. of Peking. Lon. $112^{\circ} 25'$ E. lat. $28^{\circ} 11'$ N.

Tchung-tcheou, city of China, of the first rank, in Fo-kien. It has a considerable trade with Emony, Pong-hou, and Formosa; and is 950 ms. S. of Peking. Lon. $117^{\circ} 35'$ E. lat. $24^{\circ} 32'$ N.

Tchuing-te, city of China, of the first rank, in Honan. It is 255 ms. SSW. of Peking. Lon. $111^{\circ} 5^{\circ}$ E. lat. $29^{\circ} 2'$ N.

Tchao-king, city of China, of the first rank, in Quing-tong, seated on the river Si, 70 ms. W. of Canton.

Tchao-tcheou, city of China, of the first rank, in Quan-tong, seated on the Pei-kiang, 85 ms. E. of Canton.

Tche-kiang, province of China, one of the most considerable in extent, riches, and pop. It is bounded on the N. and W. by Kiang-nan, SW. by Kiang-si, S. by Fo-kien, and E. by the Ocean. In this province, whole plains are covered with dwarf mulberry trees, purposely checked in their growth; and prodigious quantities of silk-worms are bred. The principal branch of trade consists in silk stuffs; and those in which gold and silver are intermixed, are the most beautiful in China. Hang-tcheou is the capital.

Tchernigof, government of Russia, formerly a part of the Ukraine. Its capital, of the same name, is seated on the Desne, 345 ms. SSW. of Moscow. Lon. $66^{\circ} 45'$ E. lat. $51^{\circ} 24'$ N.

Tchesme, town of Asiatic Turkey, on the W. coast of Natolia, with a citadel. It stands almost opposite Scio, at the head of a spacious road, which is famous for the destruction of two Turkish fleets, first by the Russians, in 1770, secondly by the Greeks in 1822. See *Chisme*. It is 4 ms. E. of Smyrna. Lon. $26^{\circ} 26'$ E. lat. $38^{\circ} 26'$ N.

Tching-kiang, strong city of China, in the province of Kiang-nan, 470 ms. SSE. of Peking. Lon. $118^{\circ} 55'$ E. lat. $32^{\circ} 14'$ N.

Tching-tcheou, city of China, in the province of Hou-quang, seated near the canal through which all barks must pass in going from Sou-tcheou, to Kiang. Under it are five cities of the third class, in which a kind of plain earthen ware is prepared, highly valued by the Chinese, who prefer it to the most elegant porcelain. It is 640 ms. SSW. of Peking. Lon. $109^{\circ} 40'$ E. lat. $28^{\circ} 23'$ N.

Tching-ting, large city of China, in the province of Pe-tcheli. Its district contains five cities of the second, and 27 of the third class; and it is 110 ms. S. by W. of Peking. Lon. $114^{\circ} 21'$ E. lat. $38^{\circ} 9'$ N.

Tche-y-tou, city of China, the capital of Setcheuen, formerly the residence of the emperors, and one of the largest and most beautiful cities in the empire. Lon. $103^{\circ} 44'$ E. lat. $30^{\circ} 40'$ N.

Tchi-tcheu, city of China, in the province of Kiang-nan. It is seated on the river Kiang. Lon. 117° E. lat. $30^{\circ} 45'$ N.

Tchong-king, city of China, and one of the most commercial in the province of Se Schuin. It is 637 ms. SW. of Peking. Lon. $106^{\circ} 30'$ E. lat. $29^{\circ} 42'$ N.

Tchookches, the inhabitants of the NE. extremity of Asia, opposite Bhering's strait.

• *Tchudskoi*, NE. coast of Asia, inside of Bhering's straits. Lon. W. from London $160^{\circ} 46'$ lat. $66^{\circ} 15'$ N.

Tchuktches, or *Tcundskoi*. See *Tchookches*, and *Tchutski*.

Tchutar, the most northern of the three departments of Eastern Chinese Mongolia, occupied by different Tartar tribes.

Tche-car, city of Mongolia, capital of the province of the same name, and the residence of a Mandshur general. It is a modern city, built by the emperor of China, to secure his frontiers against the incursions of the Russians. It

is seated on the Norin, 660 ms. NNE. of Peking. Lon. $123^{\circ} 50'$ E. lat. $47^{\circ} 25'$ N.

Tede's Valley, psto. Kenhawa cty. Virg. by pstrd. 358 ms. NW. by W. from Richmond.

Tebesta, or *Tinsal*, town of Algiers, in the province of Constantina, with a castle, and several remains of antiquity. It is seated at the foot of a mountain, on the borders of Tunis, 180 ms. SE. of Constantia. Lon. $8^{\circ} 5'$ E. lat. $34^{\circ} 51'$ N.

Tedsi, commercial town of Morocco, in the province of Sus, seated in a plain, abounding in corn, 25 ms. SE. of Tarodant.

Tees, river of Eng., which rises in the confines of Cumberland, divides Durham cty. from Yorkshire, and falls into the German Ocean below Stockton.

Tefezara, strong town of Algiers, in the province of Tremesen, 12 ms. from the city of that name. There are a great many mines of iron in its territory.

Tefflis, city of Russia, residence of the Russian governor, and capital of Georgia, one of the 7 Caucasian nations between the Black Sea and the Caspian. It is called by the inhabitants, *Thilia Cabar* (warm town), from the warm baths in its neighbourhood. Though its circumference does not exceed two English ms., it contains 20,000 inhabitants, of which more than one-half are Armenians; the remainder are principally Georgians, with some Tartars. Tefflis is a place of considerable trade, especially in furs, which are conveyed thence to Constantinople, by the way of Erzerum. The silks of this country are bought up, on the spot, by the Armenians, and conveyed to Smyrna and other parts of the Mediterranean; but the greatest part is first sent to Erzerum to be manufactured. It is 265 ms. NE. from Erzerum. Lon. $65^{\circ} 3'$ E. lat. $41^{\circ} 59'$ N.

Tefza, town of Morocco, in Africa, 70 ms. NE. of Morocco.

Tegusa, town of Zehara, capital of a territory

of that name, to the NE. of Senegal. It is remarkable for mountains of salt. Lon. $6^{\circ} 30'$ W. lat. $21^{\circ} 40'$ N.

Tegerhy, town of Fezzan, in Africa. 80 ms. SW. of Mourzouk.

Teglio, town of the country of the Grisons, capital of the government of the same name, in the Valtelline. It is situated on the top of a mountain, 9 ms. from Tirano, and 12 from Sondrio.

Tehuantepec, *Teguatepec*, or *Tecoatepec*, port of the Pacific Ocean, in the Mexican state of Oaxaca, situated at the bottom of the gulf of Tehuantepec; and near the mouth of the Chinampapa river. It is environed by the villages of San Francisco, San Dionisio, and Santa Maria de la Mar. Lon. W. C. 18° W. lat. $16^{\circ} 5'$ N.

Tehuantepec, the Gulf of, is a semi-elliptical indenting of that part of the Pacific Ocean, stretching between Guatemala and the state of Oaxaca.

Teign, river of Eng., in Devonshire, composed of two branches, which rise in the centre of the city, and uniting, enter the English channel at Teignmouth.

Teignmouth, seaport of Eng., in Devonshire, has a considerable coasting trade, especially to Liverpool. It is seated at the mouth of the Teign, 12 ms. S. of Exeter, and 280 W. by S. of London. Lon. $3^{\circ} 29'$ W. lat. $50^{\circ} 32'$ N.

Teinendorf, town of Germany, in the circle of Bavaria, 12 ms. WNW. of Saltzburg.

Teisse, river of Hungary, which rises in the Carpathian mountains, passes by Tockay and Segedin, and falls into the Danube, near Titul. The Teisse is the largest branch of the Danube. Its extreme source is in the Carpathian mountains, between Hungary and Brevovina in Poland. From these regions it flows to the NW. by W. 250 ms., by two great branches, the Teisse proper and Zaposch. Below their junction, the united waters turn to SW. by W. 100 ms., receiving the Bodrog from the NE. and the Bodra from the NW. The union of all these confluents, at N. lat. 48° , is remarkable for the commencement of the extensive alluvial plains of Hungary, and the great bend of the Teisse to the S. Directly opposite also to the bend of the Teisse southwardly, the Danube below Graü assumes a similar course; the two streams flowing nearly 200 ms. in a parallel direction, each breaking into innumerable channels and islands. The Teisse, below its southern bend at Polgar, receives numerous large branches from Transylvania, and in particular the Marosch, a river of 250 ms. length of course. The entire valley of the Teisse embraces an area of 63,500 sqms. The Teisse is navigable to Szegedin, where it receives the Marosch, above which it is too much dispersed into small channels. It is united to the Danube at Buda by a canal of about 50 ms. See *Temes river*.

Tekin. See *Bender*.

Telemona, town of Italy, in Tuscany, with a small harbour and a strong fort. It is seated at the mouth of the Ossa, at the extremity of a point of a rocky rock, 10 ms. from Orbitello. Lon. $11^{\circ} 11'$ E. lat. $42^{\circ} 28'$ N.

Telema. See *Cervento*.

Telles, seaport of Fez, in Africa, 120 ms. ESE. of Tangier.

Telegein, or *Telga*, trading town of Sweden, in Sudermania, seated on the S. bank of the lake Macler, 12 ms. SW. of Stockholm. Lon. $17^{\circ} 24'$ E. lat. $59^{\circ} 18'$ N.

Telfair, city. Geo., bounded by Appling S., Doolen SW., Pulaski NW., Little Oakmulgee river or Montgomery city. NE., and Tatnall E. Length 50 ms., mean width 25; area 1250 sqms. The Oakmulgee river enters the NW. side of this city, and after an immense curve to the SE., E., and NE., joins the Oconee at its NE. angle. Chief town, Jacksonville. Pop. 1820, 2104. Cil. lat. 32° N. lon. W. C. 6° W.

Tell, extreme western tp. Huntingdon city. Penn., 23 ms. SE. from Huntingdon. Pop. 1820, 686.

Tellicherry, seaport of Hindoostan, on the coast of Malabar, where there is an English factory. It is 30 ms. NNW. of Calicut. Lon. $75^{\circ} 50'$ E. lat. $11^{\circ} 48'$ N.

Tellico, small river, Monroe city. Tenn., which, after a comparative course of 25 ms., falls into Tenn. river, 10 ms. NE. from Athens.

Tellico, pstv. formerly Tellico Block House, at the mouth of Tellico river, by pstd. 162 ms. a little S. of E. from Murfreesborough.

Tellico Plains, pstv. Monroe city. Tenn., on Tellico river, by pstd. 160 ms. a little S. of E. from Murfreesborough.

Teltah, town of Germany, in Moravia, seated on the frontiers of Bohemia, at the source of the river Teya, 36 ms. WNW. of Znaim. Lon. 16° E. lat. 49° N.

Temendefust, town of the kingdom of Algiers, seated on the Mediterranean, 10 ms. E. of Algiers.

Temes, river of Hungary, in the bannat of Temeswar, which it drains, and falls into the Danube with the Teisse. See *Temeswar*.

Temeswar, town of Hungary, capital of a territory called the bannat of Temeswar. It is seated in a morass, 60 ms. NE. of Belgrade, and 150 SE. of Buda. Lon. $22^{\circ} 30'$ E. lat. $45^{\circ} 57'$ N. The bannat of Temeswar is, in general, a low alluvial country, but the Temes river is too much broken by channels to be naturally navigable. This stream, in 1750, was, however, made passable with boats, by the Bega canals, from the Theiss to Temeswar, and up the Temes river.

Temisah, large town of the kingdom of Fezzan. Here the caravan of pilgrims from Bornou and Nigritia, which takes its departure from Mourzouk, and travels by way of Cairo to Mecca, usually provides the stores of corn and dates, and dried meat, requisite for its dreary passage. It is 120 ms. ENE. of Mourzouk.

Temple, tp. Kennebec city. Maine, 40 ms. NW. from Augusta. Pop. 1820, 615.

Temple, pst. Hillsborough city. N. H., 30 ms. S. from Concord. Pop. 1810, 941; in 1820, 752.

Templeton, pst. Worcester city. Mass., lying between Athol and Petersham, 28 ms. NW. of Worcester, and 63 W. by N. of Boston. Pop. in 1810, 1205; in 1820, 1331.

Templin, town of Germany, in Upper Saxony, and the Ucker Marche of Brandenburg, which has a great trade in timber. It is 15 ms. SW. of Prenzlau, and 84 N. of Berlin. Lon. $13^{\circ} 25'$ E. lat. $53^{\circ} 5'$ N.

Temrock, seaport of Cuban, seated on the Sea

of Asoph, 20 ms. E. of the Straits of Caffa. Lon. $57^{\circ} 20'$ E. lat. $45^{\circ} 27'$ N.

Tenasserim, town of Siam, capital of a province. It is situated on a river of the same name, which falls into the Bay of Bengal. Lon. $98^{\circ} 8'$ W. lat. $12^{\circ} 12'$ N.

Tenbury, town of Eng., in Worcestershire, on the Teme, 15 ms. W. by N. of Worcester, and 130 W.N.W. of London. Lon. $2^{\circ} 13'$ W. lat. $52^{\circ} 16'$ N.

Tenby, seaport of Eng., in Pembrokeshire. Its trade is inconsiderable. It is 10 ms. E. of Pembroke, and 253 W. of London. Lon. $5^{\circ} 5'$ W. lat. $51^{\circ} 42'$ N.

Tenby's Island, island in the Pacific Ocean, 2 ms. in circumference, discovered by lieut. Ball, in 1760. Lon. $151^{\circ} 31'$ E. lat. $1^{\circ} 39'$ S.

Tenda, town of Italy, in Piedmont, capital of a city of the same name. It is seated at the foot of a mountain, on the river Boga, 52 ms. S. of Turin. Lon. $7^{\circ} 45'$ E. lat. $44^{\circ} 10'$ N.

Tenedos, celebrated island in the Archipelago, on the coast of Natolia, and 10 ms. SW. of the Straits of Gallipoli. This island still retains its ancient name, and is one of the smallest islands of the Archipelago, situated near the coast of Lesser Asia, near the ruins of Troy. It is chiefly rocky, but fertile, being remarkable for producing the best Muscadine in the Levant; and its position, thus near the mouth of the Hellespont, has given it importance in all ages; vessels bound towards Constantinople finding shelter in its port, or safe anchorage in the road during the Etesian or contrary winds, or in foul weather. It is 11 ms. long and 7 broad, inhabited almost wholly by Greeks. According to Hobhouse the size of Tenedos has been underrated. His words are: "The size of Tenedos has been differently stated by different writers. Sandys, following Strabo, makes it only 10 ms. in circumference; but, according to Tournefort, it is at least 18; I should think it more extensive. Its breadth is about 6 ms. It appeared to us from the sea to be rocky and barren, but when we walked to the top of a considerable eminence above the town, we saw that it presented a pleasing variety of hill and dale, well cultivated, although scarcely sheltered by a single tree. The highest hill, called the Peak of Tenedos, is seen at some distance, from all the positions, both at land and sea, to the N." The ruins of the city of Alexandria Troas, stand on the main land, nearly opposite the S. end of Tenedos. See *Ekistamboul*. Tenedos is 30 ms. NW. from the town of Mytelene, 25 N. from Cape Sighe, and 5 from the opposite Asiatic coast, and 124 SW. from the mouth of the Hellespont. On the E. side is a large town, seated at the foot of a mountain, with a fine harbour, commanded by a castle. On the 5th of June, 1794, after some severe shocks of an earthquake, a small volcanic island was discovered to have emerged from the sea, between this town and the Asiatic shore.

Tenin, of *Knin*, episcopal town of Venice, in Dalmatia, on the borders of Bosnia. It is 48 ms. S. of Bihacz. Lon. $16^{\circ} 30'$ E. lat. $44^{\circ} 5'$ N.

Teneriff, one of the Canary Islands, the most considerable of them for riches, trade, and pop. It lies W. of the Grand Canary, is 70 ms. long

and 22 broad, and abounds in wine, different sorts of fruits, cattle, and game. One part of this island is surrounded by inaccessible mountains, and one in particular, the Peak of Teneriff, is 12,176 feet above the level of the sea; and the distance of the Peak from the port of Oratava is about 11 ms. The principal dependence of the inhabitants is on their wine, (their staple commodity,) oil, corn, and every kind of stock for shipping. With these the island abounds; and in their season, produces not only the tropical fruits, but the vegetable productions of the European gardens, in the greatest plenty. Teneriff enjoys an agreeable and healthy mediocrity of climate. St. Christophe de Laguna is the capital, but the governor resides at Santa Cruz.

Teneriff, town of Terra Firma, in the governor of St. Martha, seated on the Rio de la Magdalena, 100 ms. S. by W. of St. Martha. Lon. $74^{\circ} 18'$ W. lat. $9^{\circ} 47'$ N.

Tenez, town of Algiers, in Africa, in the province of Tremesen, capital of a district of the same name, with a strong fort. It is seated on the side of a mountain, 4 ms. from the sea. Lon. 1° E. lat. $39^{\circ} 30'$ N.

Ten-gin, rich, populous and commercial city of China, in the province of Houquaung, with six cities dependent on it. It is 200 ms. W. by S. of Nan-king. Lon. $112^{\circ} 21'$ E. lat. 31° N.

Teng-fog-hien, city of China, under the jurisdiction of Ho-nan, in the province of Ho-nan. It is famous on account of the tower, erected for an observatory by the celebrated astronomer Tchecoukoug, who, according to the Chinese, invented the mariner's compass.

Tennessee, state of the U. S., bounded by Miss., Al., and Geo. S., N. C. SE., Virg. NE., Kent. N., and the Mississippi river W.

| | Miles. |

| Thence due W. along N. lat. 35° , the N. boundary of Geo., to the NE. angle of Al., | 100 |
| Along N. boundary of Al. to the Tennessee river, and the NE. angle of Miss., | 140 |
| Thence to the NW. angle of Miss., and the SW. angle of Ten., on Mississippi river, | 116 |
| Thence up the Mississippi river to place of beginning, | 150 |
| Total, | 1,111 |

Area 47,900 sqms, 26,176,000 acres.
The longest line that can be drawn in Ten.

is from its SW. to NE. angles, 465 ms., and is the longest line that can be extended in any state of the U. S. The mean width about 100 ms.

Extreme S., N. lat. 35°. Extreme N., N. lat. 36° 40'.

Ten. is naturally divided into two distinct portions by Cumberland mountains. These sections have given the designating terms of East and West Ten. In relation to the rivers, Higher and Lower Tennessee would be equally appropriate. This state has features which in a remarkable manner distinguish it from any other section of the U. S. Its difference of lat. is but little, being only 1° and 40', and yet few states in our union present, on an equal surface, more marked change of climate, and vegetable production, than does Ten. Nor do any two contiguous sections of equal extent, and similar lat. in the U. S., differ more in general physiognomy, than do East, and West, or Lower and Higher Ten. The latter is a comparative Alpine region, the former depresses to within a little more than 300 feet above the level of the Gulf of Mexico. Thus, in addition to the mere declivity necessary for the descent of the streams, Ten. has a slope from the summit of the Alleghany mountains to the surface of the Mississippi river. The length of the state being near 500 ms. from E. to W., embraces all the various soils, and geological formations, from transition to recent alluvion. The extreme NE. angle almost touches the primitive mass which prevails and forms the substrata of the western part of N. C.

I have before remarked, the singular coincidence between the courses of Kentucky, Greene, Cumberland, and Tennessee rivers. It would appear that a plain, having an inclination to the SW., commenced in the SW. part of Virg., and in the SE. part of Kent, and NE. of Ten. Down this slope the rivers have their courses. Let a curved line be drawn from the great bend of Kentucky river, between Jessamine and Garrard cities, to the bend in Salt river, between Washington and Hardin cities, thence to the junction of Greene and Big Bear rivers in Butler city, thence to the great bend in Cumberland river near Nashville, and thence in a direct line to the Muscle shoals in Ten. This curve would describe a very remarkable inflection of the plain we have noticed. Thus far from their sources the rivers we have noticed pursue nearly a parallel course SW., inflecting to the W. in ascending the curve from Tennessee to Kentucky rivers. Between the designated curve and the Ohio river the plain inclines towards the latter, and the courses of the rivers conform to the change of surface, all turning to the W. of N., continues that direction to Ohio river.

From the peculiar inflections of the surface of this part of Ohio valley, Tennessee has taken its singular natural structure. The range of Alleghany mountains we have seen pass from the Hudson river to the SW. part of Virg., very nearly a SW. and NE. direction. At the latter point the lateral ridges of the chain commence a gradual curve more to the W. The two ridges which contribute most, however, to characterize Ten. are, the Alleghany, properly

so called, and Cumberland mountain. The former bounds the state, and in a great degree the sources of Tennessee river; the latter enters Ten. between Cumberland and Tennessee rivers, and by a very distinctive ridge crosses the whole state obliquely, and is the mountain which divides East from West Ten. After leaving the latter state, Cumberland mountain passes into Al., extends SW., and crosses Tennessee river near Fort Deposit, and is imperceptibly merged into the hills of Al. The Alleghany ridge, also, after entering Geo., continues over the NW. angle of that state into Al., and gradually subsides into hills in the peninsula between Alabama and Tombigbee rivers.

Between those two ridges in the SW. angle of Virg., at N. lat. 37°, Tennessee river takes its source. Under the various names of Holston, Clinch, French Broad, and Tennessee, the different confluent of this river are united above, at Kingston, in Roan city. Continuing a SW. course out of Ten. into Al., the Tennessee reaches as low as N. lat. 34° 25', the extreme southern extension of the Ohio valley. Here the Tennessee is turned to the W. by opposing high land. The inclined plane, however, down which Tennessee had thus far flowed, extends still further SW., as is demonstrated by the courses of Tallapoosa, Coosa, and Black Warrior rivers. Even the higher branches of the Cahoonchee, and Oakmulgee rivers, indicate an extension of the slope of Ten. as far as their sources.

After its turn to the westward Tennessee river inflects a little to the N., and at the point of re-entrance into Ten. abruptly turns a little E. of N., in which direction it continues through the state. Where it enters Kent. this river again turns SW. by N., and finally enters Ohio after an entire comparative course of 680 ms. This stream is by far the largest confluent of Ohio.

Cumberland river rises NW. of Cumberland mountain, N. lat. 37°, and flows nearly W. through Kent. a little N. of Ten. line, 200 ms., enters Ten. in Jackson city, and continuing nearly parallel to Tennessee river, as far as the town of Nashville; then, again, corresponding with its counter stream, assumes a NW. course, and flowing nearly parallel to Tennessee, enters Ohio river 11 ms. above the latter, after an entire comparative course of 440 ms.

These two rivers, and particularly the latter, are amongst the most remarkable objects in the hydrography and topography of the U. S. Rising on the primitive, the French Broad, branch of Tennessee, crosses the transition to the secondary or flat formation. When entering on the latter, we have already seen the entire stream turned SW. between the lateral ridges of the Appalachian system, and carried in that direction upwards of 300 ms. Following all the laws of analogy, this river ought to have continued down the slope on which it originated, and have entered the Gulf of Mexico by the channel of Mobile. On the contrary, the river turns, and actually passes a ridge of the same system of mountains which would have seemed to determine its course.

Ten. is divided into three portions, whose soil, productions, and climate, have marked

distinction. East Ten., as it is commonly called, though taken either geographically or relatively, is the south-eastern part of the state; this section is composed of a part of the valley of Tennessee river, and lies in a direction S.W. and N.E., containing about one-third of the state.

The higher valley of Ten., is in form of an oval or ellipsis, whose longest diameter, from the N.W. angle of Geo. to the S.W. of Virg., is about 200 ms., its greatest breadth from the sources of Ten. and French Broad to those of Cumberland over 150 ms., or embracing an area of more than 10,000 sqms., the much greater part in Ten. This fine vale has a secondary calcareous base, is well watered and wooded. The soil along the streams is excellent, though in the intervals poor and covered with pine and other timber indicative of sterility. This region is, however, pre-eminently distinguished by the softness of the climate and salubrity of the air. It is no doubt, as far as health is concerned, the most desirable section of the U. S. The face of the country is variegated by hill and dale, and except on its extremities not mountainous. The real elevation above the ocean has never been well ascertained. Adopting a mean rule pursued with Ohio and other streams, and giving due allowance for the much greater comparative fall in Ten., would give for the sources of the latter, at least 1500 feet above the level of the Gulf of Mexico.

From its elevation, and also from the mass of the Appalachian mountains interposing between its surface and the warm air of the Atlantic Ocean, the climate of Upper Ten. is too severe to admit the profitable culture of the cotton plant. The cereal grain, particularly maize, is produced in abundance, as is fruit of various kinds. Upon the whole it is the country of the U. S. where a due mean is best preserved, between heat and cold, and between an Alpine height and an alluvial depression.

Tennessee river, on issuing from the higher basins we have surveyed, passes through some of the lateral spurs of the Appalachian mountains; its valley is here contracted to 20 or 40 ms. wide. The scenery is wild and picturesque, the banks rocky and precipitous, and the stream confined and extremely rapid. It is through this mountain breach that the stream issues from Ten. into Al., and commences its second basin or dilatation of its valley. This second basin is more extensive than the first, or higher, though not more than one half the former, is in Ten.

Opposite to the second basin of Ten. lies the elliptical valley of Cumberland. These regions, together with the space between Tennessee and Mississippi rivers, forms West or Lower Ten., embracing about two-thirds of the whole area of the state.

The less comparative elevation and exposure to mountain influence, produces in West Ten. a more temperate climate than in the eastern section. The common features, such as hills, valleys, or mountains of the former, are less bold and prominent than in those of the latter. Approaching the Mississippi the varied scenery so common along Ohio is no more seen. The country, though broken into small hills, is

comparatively level. The soil of West Ten. is superior to that of East Ten., having more river alluvion in the former.

The substrata are calcareous, and composed of secondary limestone. The rivers, though not flowing in such profound chasms, as do those of Kentucky, have, nevertheless, deep channels, and precipitous banks. It is this calcareous base, which imparts such exuberant fertility to all soils where that stone prevails. It is this fossil which enables us to solve a problem, otherwise of difficult solution; that is, the very great extremes of fertility often perceived in contiguous districts. In W. Tennessee, as elsewhere, the beneficent quality of the calcareous admixture in its soil, produces the best effects on its agriculture. Cotton, the most valuable staple of the state, is here cultivated in great quantity.

A remark made in our view of Kentucky, applies with equal force to West Tennessee; that is the fact that the best land is distant from the water courses. Bottom land, of similar specific quality with that on Ohio, and some of its confluent on the higher parts of the basin, is very rare on either the waters of Tennessee or Cumberland. The sharp abrupt ridges of the eastern and southeastern part of Kentucky, are succeeded in Lower Tennessee, by hills of a more conical form, and more gentle inclination.

Though less diversified in its exterior, than either Kentucky or E. Tennessee, W. Tennessee is far from exhibiting a monotonous aspect, and very far from enjoying a uniform temperature. A very marked difference of seasons is perceptible between the valleys of Tennessee and Cumberland rivers, even where but little change of lat. exists. The winters near Nashville are so much more rigorous than those upon the waters of Duck and Buffalo rivers, as to excite much surprise in minds unaccustomed to common prominent effects with their more latent causes. Those causes, in the present instance, are, however, sufficiently obvious. The ridge of hills which separates the two valleys, and shelters that of Tennessee from, and lessens that of Cumberland exposed to N. winds. As no satisfactory criteria can be adduced, the fact is established, the cotton plant succeeds much better on the waters of Lower Tennessee river, than on those of Cumberland, where soil and other circumstances are equal.

As in every instance which has reached my knowledge in the U. S. the advantages of productive soil, and lengthened summer, is purchased in Tennessee by a sacrifice to health. The immense slope of this state comprises, as I before observed, all the varieties of formation, from the most solid transition, to the most recent alluvion; it also presents every change of elevation, from the most salubrious to those most exposed to the deleterious, combined effects of heat and moisture, to any comprised in the U. S. It may be also noted amongst the most remarkable features of Tennessee, that its greater comparative length, than E. and W., and that it occupies the lowest valley in that direction which exists E. of the Mississippi, in the U. S.

To the above aggregate amount, which is included in the inhabited and appropriated parts of Tennessee, may be added 1200 sqns. yet appropriated from the Cherokee Indians, and lying S. from the cities of Hamilton, M'Minn,

and Monroe, and N. from the N. boundary of Georgia. This will produce 37,800 sqns. as the superficies of Tennessee; which falls about one-twelfth part below the actual area; but deducting water surface, yields very nearly the arable land of the state.

Of the existing pop. of Tennessee, 3737 are free blacks, and 79,157 are slaves, leaving a white pop. of 340,919.

The large cities of Henry, Carroll, Henderson, Madison, and Shelby, lie between the Tennessee and Mississippi rivers, and remain, Shelby excepted, either entirely uninhabited, or but very thinly settled.

Tennessee river. See Tennessee state.

Tensaw, river of Alabama. See Mississippi

Tenaw, river of Lou.; it is the drain of the inundated lands W. of the Mississippi river, in the parishes of Concordia and Washau. It flows a little W. of S., and unites with Washau to form Black river, after a comparative course of about 120 ms.

Tenaw, parv. Baldwin cty. Al.

Tenaw, city of China, in the province of Cheung, with a good port. It is seated on the N. side of a peninsula of the Yellow Sea, 200 SE. of Peking. Lon. 115° 50' E. lat. 35° 20' N.

Tenstadt, town of Upper Saxony, in Thuringia, near the borders of Seltenein and Schambach, 5 ms. from Erfurt.

Tenaw, town of Egypt, on an island, in a lake of the same name, 28 ms. SE. of Damietta. Lon. 32° 15' E. lat. 31° 2' N.

Tenterden, corporate town of Eng. in Kent, 24 ms. SW. of Canterbury, and 56 E. by S. of London. Lon. $0^{\circ} 35' E.$ lat. $51^{\circ} 12' N.$

Tentugal, town of Portugal, in Beira, 8 ms. WNW. of Coimbra. Lon. $8^{\circ} 20' W.$ lat. $0^{\circ} 17' N.$

Tepeleken, a town of European Turkey, in Albania, situated on a river of the same name, which falls into the Adriatic, nearly opposite Otranto, in Italy. The town stands on a rocky knoll, near the river, and is a large but mean village of about 500 ordinary houses, 100 ms. from Joannina. Tepeleke was the birth place of Ali Pasha.

Tepec, town of Mexico, in the intendency of Guadaluajara, 500 ms. NW. of the city of Mexico.

Teplitz, town of Bohemia, in the Circle of Leitmeritz, celebrated for its warm baths, 14 ms. WNW. of Leitmeritz.

Tequendama, Cataract of, near the city of Santa Fe de Bogota, in New Grenada of Columbia. This very remarkable fall occurs in a mountain stream of the chain between the two great branches of the Magdalena river. A plan of these falls, and admeasurement of its descent in feet, was sent, in 1790, to the king of Spain, by the Col. Commandant, Don Domingo Esquivel. The results, reduced to English feet, were:

| | |
|----------------------|------|
| First fall, - - - - | 324 |
| Second fall, - - - - | 253½ |
| Third fall, - - - - | 581½ |
| Entire fall, - - - - | 867½ |

Teramo, town of Naples, in Ambruzzo Ultriorre, at the confluence of the Violicola and Tordino, 10 ms. NW. of Atri, and 25 NE. of Aquileia. Lon. $13^{\circ} 39' E.$ lat. $42^{\circ} 37' N.$

Terasso, decayed town of Turkey in Europe, in Caramania, formerly Tarsus, capital of Cilicia, and the birth place of St. Paul. It is seated on the Mediterranean. Lon. $35^{\circ} 55' E.$ lat. $37^{\circ} 10' N.$

Terasson, town of France, in the department of Dordogne, seated on the Vesere, 20 ms. N. of Sarlat. Lon. $1^{\circ} 19' E.$ lat. $45^{\circ} 5' N.$

Terceira, one of the Azores, or Western Islands. It is very fertile, and contains about 20,000 inhabitants. Angra is the capital.

Terchiz, or *Terhiz*, town of Persia, in the province of Chorasam, 120 ms. WNW. of Herat. Lon. $57^{\circ} 35' E.$ lat. $35^{\circ} 5' N.$

Terga, town of Morocco, seated on the Omirabin, 25 ms. from Azamor.

Tergovista, or *Tervio*, commercial town, capital of Wallachia. It has a fine palace, belonging to the Waywode, and is seated on the Jalemitz, 30 ms. NW. of Bucharest. Lon. $25^{\circ} 26' E.$ lat. $45^{\circ} 45' N.$

Terki, town of Circassia, where a prince resides, dependent on the Russians. It is seated on a river of the same name, in a marshy place, one mile from the Caspian Sea, and 128 E. of Tefflis. Lon. $47^{\circ} 50' E.$ lat. $43^{\circ} 22' N.$

Termini, town of the N. coast of Sicily, in Val di Demofa, with a strong castle. It is famous for its mineral waters, and has fine aqueduct. It is seated at the mouth of a river of the same name, in a territory abundant in corn, oil, and wine, 20 ms. SE. of Palermo. Lon. $15^{\circ} 44' E.$ lat. $38^{\circ} 5' N.$

Termoli, or *Termini*, town of Naples in Capitanata, seated near the sea, 70 ms. NE. of Naples. Lon. $15^{\circ} 20' E.$ lat. $41^{\circ} 59' N.$

Ternate, island in the Indian Ocean, the principal of the Moluccas. It is mountainous, but produces cloves, and other fruits proper to the climate. It lies a little to the W. of Gilolo, and 100 ms. E. of Celebes. Lon. $129^{\circ} E.$ lat. $1^{\circ} N.$

Terravassa, town of Piedmont, 6 ms. NE. of Casagnola, and 8 S. of Chieri.

Terneuse, town and fort of Flanders, on the W. branch of the Scheldt, called the Honut. It is 10 ms. N. of Sas-van-Ghent, and 25 WNW. of Antwerp. Lon. $3^{\circ} 43' E.$ lat. $51^{\circ} 20' N.$

Terni, ancient episcopal city of Italy, in the duchy of Spoletto. The famous cataract of the river Velino, which falls from a precipice 300 feet high, is a mile from this city, which is seated on an island formed by the river Nera, on which account it was anciently called *Interamna*. Terni is the birth place of Tacitus, the historian. It is 15 ms. S. by W. of Spoletto, and 40 N. of Rome. Lon. $12^{\circ} 40' E.$ lat. $42^{\circ} 34' N.$

Ternova, town of Turkey in Europe, in Bulgaria. It was formerly the seat of the princes of Bulgaria, and is seated on a mountain, near the Jenera, 88 ms. NW. of Adrianople, and 97 NE. of Sophia. Lon. $26^{\circ} 2' E.$ lat. $43^{\circ} 1' N.$

Terracina, anciently called Anxur, a decayed town of Italy, in Campagna di Roma, with a bishop's see. It was the capital of the warlike Volturni, and the principal church was originally a temple of Jupiter. It is seated among orange and citron groves, near the sea, on the side of a mountain, 46 ms. SE. of Rome. Lon. $13^{\circ} 15' E.$ lat. $41^{\circ} 24' N.$

Terra del Espíritu Santo, most western and largest island of the New Hebrides, in the South Seas, being 40 leagues in circuit. The land is exceedingly high and mountainous, and in many places the cliffs rise directly from the sea. Lon. $165^{\circ} E.$ lat. $16^{\circ} S.$

Terra del Fuego, under this name are comprehended several islands, at the southern extremity of America. They take their name from revolving on the largest of them. They are barren and mountainous.

Terra de Lavoura. See *Lavoura*.

Terra de Oporto. See *Oporto*.

Terra Firme, or *Tierra Firme*. See *Colombia*, *New Grenada*, &c.

Terra Firma Propria, another name for the province of Darien, in America. See *Darien*.

Terranova, town of Sicily, in Val di Nota. It belongs to the duke of Monte Leone, and is seated near the mouth of a river of the same name, 20 ms. SSE. of Alicata. Lon. $14^{\circ} 10' E.$ lat. $37^{\circ} 9' N.$

Torre Nuova, ancient port, on the NE. coast of Sardinia, seated at the bottom of a gulf of the same name, 65 ms. NNE. of Sassari. Lon. $9^{\circ} 20' E.$ lat. $41^{\circ} 3' N.$

Torres Boeuf, an ancient outlet of the Mississippi, about 15 ms. below New Orleans.

Torrelle, pstrv. and seat of justice, Vigot, Ind. on the left bank of the Wash river, by pstrv. Ind. by W. from Indianapolis.

Torriani, or *Manzi*, small village of Pegu, beautifully situated on a high rocky bank of the Irrawaddy river, and surrounded by

groves of Mango trees, from which it takes its name. Lon. $95^{\circ} 35'$ E. lat. $17^{\circ} 32'$ N.

Terridon, *Loch*, inlet of the sea, on the W. coast of Sild. in Ross-shire, between Garlock and Applecross. It has many creeks and bays.

Terronen, town of France, in the department of the Straits of Calais, seated on the Lis, 6 ms. S. of St. Omer.

Terruel, town of Spain, in Arragon, in a large fertile plain, at the confluence of the Guadalquivir and Aldambra, 75 ms. SW. of Saragossa, and 112 E. of Madrid. Lon. $1^{\circ} 45'$ lat. $40^{\circ} 25'$ N.

Terrere, or **Teere**, town of Zealand, on the NE. coast of the isle of Walcheren, with a good harbour, and a fine arsenal, 4 ms. NE. of Middleburg. Lon. $3^{\circ} 42'$ E. lat. $51^{\circ} 56'$ N.

Teichen, town of Upper Silesia, capital of a dutchy of the same name, subject to Austria. It is surrounded on all sides by a morass, and seated near the source of the Vistula. The inhabitants carry on a trade in leather, woollen stuffs, and Hungary wines; and make pretty good fire arms, and excellent beer. A treaty of peace was concluded here in 1779, between emperor Joseph II. and Frederick William III. of Prussia. It is 27 ms. SE. of Troppan, and 65 SW. of Gracow. Lon. $18^{\circ} 17'$ E. lat. $49^{\circ} 52'$ N.

Tesegdeli, town of Morocco Proper, seated at the mouth of the Techubit. It is 200 ms. W. of Morocco.

Teshoo-Lombao, an immense monastery of Thiber, the residence of the second Lama. It comprises about 400 apartments inhabited by monks, besides temples, mausoleums, and the palace of the Lama; 200 ms. SW. from Laasa. Lat. $27^{\circ} 50'$ N. lon. $89^{\circ} 30'$ E.

Tesino, river of Switzerland, which has its source in Mount St. Gothard, flows through the country of Grisons, and the lake Maggiore; then running through part of the Milanese, it washes Pavia, and a little after falls into the Po.

Teset, town of Zahara, which gives name to a district. It is 170 ms. S. of Morocco. Lon. $6^{\circ} 56'$ W. lat. $15^{\circ} 24'$ N.

Tessia, town of Austria, in the city of Tirol, 22 ms. NE. of Trefit, and 24 SE. of Bolzano. Lon. $11^{\circ} 40'$ E. lat. $46^{\circ} 20'$.

Tesi, or **Tese**, river of Eng. which rises in the NW. of Hants, and passing Southampton and Itumsey, falls into the bay of Southampton.

Tetbury, town of Eng. in Gloucestershire, 25 ms. ENE. of Bristol, and 99 W. of London. Lon. $1^{\circ} 8'$ W. lat. $51^{\circ} 36'$ N.

Tegara, town of Barbary, in Biledulgerid, divided into two parts by a river. It stands on the confines of Tunis, in a country abounding in dates. Lon. $10^{\circ} 16'$ E. lat. $31^{\circ} 29'$ N.

Tewkesbury, borough of Eng. in Gloucestershire, with a manufactory of cotton stockings, 102 ms. WNW. of London. Lon. $2^{\circ} 13'$ W. lat. 52° N.

Tenkebury, pst. Middlesex city. Mass., on the S. side of the Merrimac, 20 ms. NW. from Boston. Pop. 1820, 1008.

Tenkebury, tp. Hunterdon city. N. J. Pop. 1820, 1490.

Texas, province of Mexico, in the former Provincias Internas; bounded SW. by the Rio Grande del Norte, on the NE. by the United States, from the sources of Rio Grande, to the mouth of Sabine, and SE. by the Gulf of Mexico. Length from the mouth of the Rio Grande del Norte to its source 1200 ms. The breadth is very unequal, the province ending in a point to the NW. whilst from the mouth of Rio Grande to the NW. angle of Louisiana, it is more than 550 ms. The whole may be considered an immense triangle, whose base is the general course of Rio Grande, and whose perpendicular would be a line drawn from the mouth of that river, to the NW. angle of Lou., area 240,000 sqms.; extending from lat. 26° to 40° N. Texas exhibits a very great variety of climate; it is however comparatively a cold and dry country. Though intersected by a number of rivers, and chequered by some mountains, the general surface is level, and except near the streams steril. Immense prairies extend along the rivers, on which the bison, deer, wild goat, and wild horse, range in herds to the amount of countless thousands. Like many other regions to the SW., Texas, is to an astonishing degree void of spring water. The earth and heaven are alike arid. This circumstance will for ever prevent a dense population from being spread over this country. It will be a picture, on which many richly glowing parts may be seen, but taken as a whole, will appear the representation of nakedness and desolation. Towards the gulf of Mexico, a low border of sea marsh skirts the whole province. The banks of the rivers in the interior, are picturesque, and often to a small extent extremely productive. Except near the sea coast, Texas, shares with all the internal provinces, an amount of the highest degree of elasticity and salubrity. Sugar, cotton, tobacco, rice, maize, all the European cerealia, and fruits may be cultivated, together with many useful vegetables, (perhaps coffee,) which cannot be produced in Europe.

Texas cannot be considered as peopled by the civilized descendants of Europeans. St. Antonio de Bexar, St. Alzar, La Bama, and Nacogdoches, are the only Spanish settlements, or colonies existing in the country, the whole being short of 30,000 whites. Even the native Indians are comparatively few in number. The most numerous tribes are those of the Heitans,

or Cumanches, who are nomadic, having no fixed residence, rove over the plains on horse-back, and though occupying the extent of an empire are very limited in number. Other more settled tribes exist towards the gulf of Mexico. It may, however, be doubted, whether there are 40,000 human beings in all Texas.

After the Spaniards had formed presidios, or missions in New Mexico, more than a century elapsed before they extended their colonies into Texas. As late as 1714, the most northeastern establishment of Spain towards the mouth of Rio Grande del Norte was in New Leon. In 1699, the French came to the mouth of the Mississippi, and commenced the settlement of Lou., which that nation claimed in virtue of La Salles' discoveries made 16 years before.

La Salle, discovered the Mississippi, and explored it to its mouth in 1683; and in 1685, February 16th, in an attempt to return by sea from France to the Mississippi by mistake landed in Texas, at the mouth of the Guadalupe or Colorado river. March 19th, 1687, he was murdered by one of his own men, and his colony broken up by a Spanish detachment from New Leon.

When the French began to extend their forts and settlements along the Mississippi and its confluent, the circumstance aroused the vigilance of the Spanish authorities in Mexico. The jealousy of the Spaniards was indeed superinduced by the active curiosity of the French. In 1714, Bienville, governor of Lou., sent St. Denis to explore the regions claimed by France, W. of the Mississippi. St. Denis penetrated to the Spanish settlements W. of the Rio Grande del Norte, and returned to Lou. January 1717. A French detachment, formed a fort at Natchitoches; and in the same month a Spanish force settled at the Adayas, nine m. W. of Natchitoches. France gave the name of Louisiana to all the country E. of Rio Grande, and the Spaniards designated all the regions between Rio Grande and Rio Grande rivers, the province of Las Texas. This has excited this clashing of claims and confusion of names, until March 1812, when the treaty of 1819, was finally ratified by the government of the U. S., and the boundaries of Lou. and Texas definitely fixed.

As defined by that treaty, part of Arkansas and Red rivers are included in Texas. The rivers flowing into the gulf of Mexico, whose sources are in the interior of Texas, are Sabine, Trinity, Brazos a Dios, Colorado, the colored streams of St. Marc and Guadalupe, Nueces, and Rio Grande del Norte. The shore is very much indented by bays and inlets. A chain of islands extends from Sabine to Rio Grande, within which are several good harbours. But the Lou. the shores are naked, and low, and have a desolate appearance. Navigation is difficult, from the shallowness of the sea, and the want of landmarks.

St. Antonio de Behar, is the capital and residence of the Commandant General of Texas. It is a mere mud fort, and is situated on the head waters of Natchez river, a small river, or presidio containing only a few houses and farms. *See Guadalupe, Texas.*

Thames, the finest river in Great Britain, which takes its rise from a copious spring, called Thames Head, 2 ms. SW. of Cirencester, in Gloucestershire. At Oxford (in whose academic groves its poetical name of Isis has been so often invoked) it is joined by the Charwell, and proceeding by Abingdon to Dorchester, it receives the Thames. Passing by Wallingford to Reading, and forming a boundary to Berkshire, Buckinghamshire, Surry, and Middlesex, it waters Henley Marlow, Maidenhead, Windsor, Staines, Chertsey, Kingston, and Brentwood in its course to London; during which it receives the Kennet, Eddon, Coln, Wey, Great Ouse, Brent, and Wandsworth. From London the river proceeds to Greenwich, Woolwich, Grays, and Blackwall, and Leigh, into the German Ocean, in which course it parts Essex from Kent, and receives the Lea, Roding, Darent, and Medway. The tide flows up the Thames as high as Kingston, which, following the winding of the river, is 70 ms. from the Ocean; a greater distance than the tide is carried by any other river in Europe. Though the Thames is said to be navigable 138 ms. above London Bridge, there are so many flats, that in summer, the navigation westward would be stopped, were it not for the number of locks; but the new cuts is 32 ms. above that bridge. A new cut has been adopted, in some places, to shorten the navigation; there is one at Echlade, and another a mile from Abingdon. A still more important undertaking was begun in 1789; the junction of this river with the Severn. A canal has been made from the Severn to Stowood, which is now continued to Echlade, where it joins the Thames; a distance of above 20 ms. A communication between this river and the Great and Mersey

has likewise been effected, by a canal from Oxford to Coventry; and another canal extends from this, at Braunston, to the Thames at Brentford, called the Grand Junction Canal.

Thames, river of Conn., formed of two principal branches, the Shetucket and the Norwich, or Little River, which have their junction at Norwich. From this place the Thames is navigable 15 ms. to Long Island Sound, which it enters below New London.

Thames, river of U. C., formerly called la Tranche, rises in the Chippewa country, and running SW., washes the cities of York, Norfolk, Suffolk, and Kent, and disembogues itself into Lake St. Clair, above Detroit. It is a river of considerable extent, without falls. From its upper branches, it communicates by small portages with Lake Huron, and the Grand river; the site of Oxford is on its upper fork; and that intended for Dorchester on its middle fork; London on the main, and Chatham on its lower fork. It is a fine inland canal, and capable of being highly improved. The lands on its banks are extremely fertile. About the mouth of this river are large extensive marshes, or natural meadows, which, with the exception of small tracts of woodland on the banks of the river, and a few woody islands, extend about 12 ms. up the country, and about 4 or 5 ms. in depth, affording hay sufficient for a numerous settlement.

Thamsbruck, town of Upper Saxony, in Thuringia, on the river Unstrut, 3 ms. N. of Langensalza.

Thanet, island of Eng. comprising the E. angle of Kent, being separated from the mainland by the two branches of the Stour. It produces much corn, and the S. part is a rich tract of marsh land. It contains the towns of Margate and Ramsgate, and several villages.

Thannhausen, town of Suabia, on the river Mindel, 14 ms. N. of Mindelheim.

Thasos, island of the Archipelago, on the coast of Macedonia, at the entrance of the Gulf of Contessa. It is 12 ms. long and 8 broad, and abounds in all the necessaries of life. The fruits and wine are very delicate; and there are mines of gold and silver, besides quantities of fine marble. The chief town, of the same name, has a harbour frequented by merchants. Lon. $24^{\circ} 32'$ E. lat. $40^{\circ} 59'$ N.

Tharhia, ancient *Thebes*, as the modern Greeks pronounce the name of this place. Few places have undergone more vicissitudes than Thebes. In the flourishing ages of Greece it was the counterpoise between Athens and Sparta, and under Epaminondas became for a short period arbitress of Greece. Destroyed by the Macedonians, Thebes gradually recovered, but experienced the effects of Roman vengeance from Sylla. This misfortune completed its ruin, having never since recovered any considerable magnitude. It is now a poor village of 200 houses, mostly of wood, and principally inhabited by Turks. The vicinity of Thebes is thus described by Hobhouse: "A person standing on a small hill, which is a few paces from the modern city of Thebes, has the following view of the surrounding country:—Immediately beyond the town, to the E., the ground rises into bare, rugged inequalities, not high

enough to be called hills, beyond which there is a plain, well cultivated, called the plain of Scimitari, (anciently that of Tanagra,) bounded by the strait of Negropont to the E., and to the S. by the Attic mountains, now called Ozea, and a ridge of mount Elatus, or Cithaeron. To the S. the ground rises by a gentle ascent, and then falls into another large plain, bounded by Cithaeron, and stretching to the SW. through this plain, as well as that of Scimitari, runs a river, now without a name, but formerly the Asopus. The ruins of Plataea are to be seen about 6 ms. to the SW. of Thebes, near a village called Gochi. To the W. is the flat plain of Thebes; and far off beyond Livadia, to the SW., is seen the mountain Zagari, the ancient Helicon. To the NW. the Theban plain is separated from the sea, overflowed by the lake, by a stony hill, not very high, at 7 or 8 ms. from the town. In this direction, the river is terminated by the snowy summits of Parnassus. To the N. and to the NE., in which direction there is a road to the town of Negroponte, there is an uneven plain, washed by a river which flows not far from Thebes. This is terminated by mountains, one called Ploüs and Messapius. The eastern extremity of the latter, is bounded by the strait to the N. of Euripus. Besides some others of note Thebes gave birth to Pindar, Pelopidas, and Epaminondas. Botia was not, however, considered as prolific in genius by the ancient Greeks.

Thibet, *Thebet*, or *Tobbat*, a name known to the Arabians and Persians, is unknown in the country itself. It is supposed to be a corruption of the Thibetian words, *Ten-boot*, "kingdom of Boot." The Chinese call it *Dolan*; the Mongols, *Barau-Tala*, "the country on the right."

Under the name of Thibet, European Geographers comprehend those elevated and widespread regions which lie N. from Indostan, E. of Great Bucharia, S. from Little Bucharia, SW. from Tangoot; to the W. of China, and SW. from the Birman empire. Thibet extends from lat. 26° to $36^{\circ} N.$ The southern boundary is generally formed by the Himalaya, and the northern by the Moo's Tag chain. The interior is very imperfectly known, and in reality the outlines are indefinite. The whole country, as far as we know of its topography, is a congeries of mountains with intervening valleys or very elevated tablelands.

The Hoan-Ho, and the Kian-Ku, rise on the eastern border of Thibet, and flowing eastward enter the Pacific Ocean, after an immense course through China. The great river of Cambodia derives its source from southern Thibet, from whence pursuing a S.E. course of upwards of 2000 ms. falls into the Chinese sea, N. lat. 10° . The Irrawaddy, the May-Kian of Laos, and the Noa-Kian &c. also among the vast streams which take their volumes from the gold plateau of Thibet, but the most remarkable river of Thibet, is the Bernam-pootra or Bramapootra, "the river of Brahma." Rising in the same frozen and rocky region with the Indus, the Ganges, the Sanpoo or higher Bramapootra pursues a S.W. course of 1000 ms., through Thibet and Assam, passing Lassa, the capital of the former, and turning in the latter to SW. finally joins the Ganges and enters the Bay of Bengal.

Of the known lakes of Thibet, that of Terkir, and Yambo, are the principal.

The seasons of Thibet are peculiarly regular. The spring, from March to May, is changeable, the rainy season lasts from June to September, during this period, the rains are incessant and copious, the rivers are swelled and carry their inundations to the far distant provinces of China, Cambodia, Siam, Burmah, and Bengal. The rainy is followed by the winter season. The

latter continues from October to March clear and serene, with cold exceeding that of any part of Europe. The air is dry and piercing, and as low as 26° , vies in intensity of cold, with that of the Alps, in the parallel of 46° . As might be expected, where every other circumstance is alike, the climate becomes more mild advancing S., but from its great elevation Thibet may be viewed as a country virtually extending from lat. 45° to 58° . Travellers represent the vegetable productions as much the same with Europe; and a similar remark may be made in respect to animals, though some species of the latter are found in Thibet not known in Europe; such are the musk animal, and the Yak or grunting Ox. Iron and copper are its most abundant minerals, though gold, lead, quicksilver, and Rock salt are found in various situations.

Without including kingdoms and provinces little known and rendered doubly uncertain from a mixture of Chinese, Mongolian and Thibetian names, we may consider Thibet as subdivided into three natural sections. Great Thibet, Little Thibet, and Bootau. Little Thibet lying to the W. from Great Thibet, is drained by the NE. branches of the Indus, and not as was formerly supposed, by those of the Ganges.

In general terms, the features of all Thibet may be described as rude, but if it is poor in the productions of nature, it is rich in superstition. It is the "*Sacred Land*" of central Asia. Near Lassa resides the earthly vice-gerent, the Dalai-Lama. The superstitions of Central Asia, are divided into three subsystems; Schamanism, Braminism, and Lamaism. The Schaman is probably the most ancient, and certainly the most extensively professed of any religious system ever known on this planet. Though expelled from and supplanted by the Bramins in Indostan, the Schaman priests are spiritual leaders or drivers from Malacca to the Frozen Ocean. The empire of China is now politically at the head of this religious system, and possessing Thibet, is master of the person of its Hierarch, the Dalai-Lama. In fact the present emperors of China, stand in a similar relation to the Lama of Thibet, which the German emperors of the middle ages did, and really continue to do with the Roman Pontiff.

Tigris, river of Turkey in Asia, which has its source near that of the Euphrates in the mountain of Tephiler, in Turcomania; afterwards, it separates Diarbeck from Erzerum, and Khuis-tan from Irac Arabia, and uniting with the Euphrates, falls into the gulf of Persia, under the name of Schat-al-Arab. This river passes by Diarbekar, Gezira, Maysal, Bagdad, and Bas-sarah. The Tigris derives its name from the rapidity of its current; it was called Tigo in the Median language, *Diqlis* in Arabic, and *Hid-dekel* in Hebrew; all of which terms signify "the flight of an arrow." Though the Euphrates has the longest course, some travellers seem to suppose that, in volume, the Tigris equals or exceeds its rival. Taken together, these two rivers would, to a civilized and commercial nation, afford noble and extensive lines of intercourse.

Toulon, city and seaport of France, capital of the department of Var, and late province of Provence. The inhabitants are computed at 80,000. The harbour is distinguished by the names of the Old Port, or Merchants' Port, and the New Port, or King's Port. The New Haven was constructed by Louis XIV as were the fortifications of the city. In the front of this haven is an arsenal, containing all the places necessary for the construction and fitting out of vessels; the first object that appears is a rope-walk, entirely arched, extending as far as the eye can reach, and built after the designs of Vauban; here cables are made, and above is a place for the preparation of hemp. Here likewise is the armory for muskets, pistols, halberts, &c. In the park of artillery, are cannons placed in piles, bombs, grenades, mortars, and balls of various kinds, ranged in wonderful order. The long sail room, the foundry for cannon, the dock yards, the basins, &c. are all worthy of observation. In a word, the basins, docks, and arsenal at Toulon, warranted the remark of a foreigner who visited them, that the king of France was greater there than at Versailles. Toulon is the only mart in the Mediterranean for the re-exportation of the products of the East Indies. Toulon is seated on a bay of the Mediterranean, 37 ms. SE. of Marseilles, and 317 SSE. of Paris. Lon. $5^{\circ} 56' E$. lat. $43^{\circ} 3' N$.

Toulouse, city of France, in the department of Upper Garonne, and late province of Languedoc. It contains 56,000 inhabitants, although its pop. bears no proportion to its extent. There are many monuments of antiquity, and it is one of the most flourishing cities of the old Gauls, and a Roman colony; in process

at time it became the metropolis of the Visigoths, afterwards of Aquitania, and at length, one of the most considerable governments of France, and the seat of a parliament. Communicating with the Atlantic, on one side, by the river Garonne, and with the Mediterranean, on the other by the canal of Languedoc. Toulouse might have been a very commercial city: but the taste of the inhabitants has been principally for the sciences and belles-lettres. Of course there are two colleges, two public libraries, and three academies. The little commerce they have, consists in leather, drapery, blankets, mignonets, oil, iron, mercury, hardware and books. The bridge over the Garonne is at least, equal to those of Tours, and Orleans: it forms the communication between the city and suburb of St. Cyprian. Toulouse is 37 ms. E. of Auch, 125 SE. of Bordeaux, and 350 S. by W. of Paris. Lon. $1^{\circ} 21'$ E. lat. $43^{\circ} 35'$ N.

Tours, considerable city of France, capital of the department of Indre and Loire, advantageously seated on the Loire, near the Cher. Over the former is one of the finest bridges in Europe, consisting of 15 elliptic arches, each 75 feet diameter. It is a large and well built city, and the streets very clean by reason of several fountains in it, with a fine mall above 1000 paces long. Under the ministry of cardinal Richelieu, 27,000 persons were here employed in the silk manufacture; but now the whole number of inhabitants is only 22,000. The red wines of Tours are much esteemed. In one of the suburbs, is the late abbey of Marmoutier, reputed the most ancient in the W. Near the city is Plessis les-Tours, a late royal palace, built by the profligate and superstitious Lewis XI., who died here, in 1483. Tours is 52 ms. Towanda, tp., ps.v., and seat of justice, Bradford cy. Penn., on the right bank of the Susquehanna river. Pop. of the tp. in 1800, 1024. In June, 1823, I visited Towanda, and was there informed that bituminous coal of the best quality, and in great quantity, had been discovered in the mountain valleys SW. from that place. In Sept. and Oct. of the same year, I travelled over Alleghany cy. Md., and found bituminous coal of very superior quality, in common use in the vicinity of the Alleghany ridge. It is first seen near Frostburg, 11 ms. from Cumberland; it, however, abounds in the vicinity. Some of the strata I examined, and found them about an average of 5 feet, and in secondary formation. It appears therefore, that from one side of Penn. to the other, that bituminous coal commences, advancing westward, with the Alleghany ridge.

Trelo-Vouni, ancient Hymettus, mountain of Greece in Attica. Trelo Vouni is more particularly that ridge which rises from the plains of Athens, and so much celebrated in classic writings. SE. from Athens, and distant from that city 3 ms., the country is intersected by mount Hymettus, divided into two ranges; the first running from ENE. to WSW. and the second, forming an obtuse angle with the first, and the second having a direction from WNW. to ESE. The first range next Athens, Hymettus proper, ends about 4 ms. from the promontory Zoster, now Halkes, but the hills on the other side of a gap, through which runs the road leading to the Sunian promontory, seeming like a continuation of the same mountain, has been named the Lesser Hymettus. The great range is now called Trelo-Vouni; that on the SE. side of the gap, Lambro-Vouni, from the ruins of one of the ancient villages called Lampros.

Hymettus is neither a high nor a picturesque mountain, being a flat ridge of bare rocks. The sides of it, about half way up, are covered with shrubs and heath, whose flowers scent the air with a delicious perfume. The wild thyme is still in great abundance, though very little of the once so much celebrated honey is now to be procured, though still retaining its reputation for flavour and aromatic odour.—*Hobhouse*.

Tremesani, or *Tlemzan*, city of Algiers, in the province of Mascara. It is surrounded by strong walls, and inhabited by poor Arabs, Moors, and Jews. In the time of the Arabs, it was the residence of powerful princes, but is now dwindled to scarce a fifth part of the ancient city. Its once flourishing manufactures of carpets, and woollen coverlets, are in a state of decay; and the former masterpieces of architecture have disappeared, for there is not a single building of excellence now to be seen. It is 100 ms. SSW. of Oran. Lon. $1^{\circ} 2' W$. lat. $34^{\circ} 56' N$.

manufacture considerable quantities of oil from
the bean cultivated in the vicinity, or from
those imported; one salt manufactory, which
produces salt by evaporation sufficient to sup-
ply the neighbouring country; and in the win-
ter, glauber salts are manufactured. There is
also near the village, a saw and grist mill. The
natural curiosities near the village are, a spring
of fresh water, in the salt marsh near the bay.
The village is a port of entry for the district of
Little Egg Harbour, which extends from Bar-
negat to Brigantine Inlet. Distance from Phi-
ladelphia 52 ms.

Tutuman, extensive province of S. America,
lying between Chili and Paraguay, to the E. of
the Andes, and W. of Rio de la Plata. This
province, with the country S. of the river Plata,
forms an extensive plain, almost without a tree.
The soil is a deep fertile mould, watered by
many streams from the Andes, and clothed in
perpetual verdure. In this rich pasturage, the
horses and cattle imported from Europe, have
multiplied to an almost incredible degree. This
has enabled the inhabitants, not only to open a
lucrative trade with Peru, by supplying it with
cattle, horses, and mules, but to carry on a
commerce equally beneficial, by the exporta-
tion of hides to Europe; notwithstanding
which, the towns in this country are no better
than petty villages, to which the Spaniards
have endeavoured to add some dignity, by
erecting them bishoprics.

vince of the government of Moscow. It is
the same province modernly according to the
codes of Catharine II. The country
produces abundantly all kinds of corn and ve-

getables. Its forests yield the most valuable
timber. The quadrupeds, and the feathered
race, are the same as in all the N. of Europe.
Besides the fish common to most lakes and ri-
vers, there is one peculiar to the waters of these
northern regions, called the sterlet, the *acipen-
ger ruthenus* of Linnaeus, and is a species of
sturgeon, highly esteemed for the flavour of its
flesh, and for its roe, of which the finest caviar
is made.

Tver, city of Russia, capital of a government
of the same name. It is a place of considera-
ble commerce, being seated at the conflux of
the Peczora and Volga, along which is conveyed
all the merchandise sent by water from Siberia,
and the S. provinces, towards Petersburg. It
is divided into the old and new town; the for-
mer, situate on the opposite side of the Volga,
consists almost entirely of wooden cottages.
Catharine II. at her own expense, raised the
governor's house, the episcopal palace, the
courts of justice, the exchange, the prison, and
some other public edifices; and to every per-
son who engaged to build a house of brick,
she offered a loan of 300l. for 12 years, without
interest. The streets are broad and long, ex-
tending in straight lines, from an octagon in
the centre; the houses of this octagon, and of
the principal streets, are of brick, stuccoed
white, and make a magnificent appearance.
Here is an ecclesiastical seminary, which ad-
mits 600 students. In 1776, the empress found-

Tunis, kingdom of Africa, bounded on the N. by the Mediterranean, on the E. by that sea and Tripoli, on the S. and SW. by Biledulgerid, and on the W. by Algiers. It extends 360 ms. from E. to W. and 250 from S. to N. The most remarkable rivers are the Guadalcarbar, Magrida, Magereda, and Caps. The form of government is aristocratic, that is, by a council, whose president is the dey. The members of the divan, or council, are chosen by the dey, and he, in his turn, is elected by the divan, which is composed of soldiers, who have more than once taken off the dey's head. The inhabitants carry on a great trade in linen and woollen cloth. In the city of Tunis alone, are above 3000 clothiers and weavers. They have also a trade in horses, olives, oil, soap, and osenices, eggs, and feathers. The established religion is Mahometanism; and the inhabitants consist of Moors, Turks, Arabs, Jews, and Christian slaves.

Turcomania, general name for the eastern shores of the Caspian Sea, from the Trukmenes, or Turcomans, who are its inhabitants.

Turcomania, ancient Armenia Major. The modern Tartar name was imposed by the Turcomans, a Tartar nation from the eastern shores of the Caspian Sea.

Turcomans, inhabitants of Turcomania. They are pastoral, ignorant, and contented wanderers. They have adopted the Turkish language, and a rude form of Mahometanism. They support themselves on the produce of their flocks, and live under tents of felt. The careless indifference of European geographers, confound the free nomadic, but in many respects respectable nations of Asia. The Turcomans and Koords have been thus mistaken and blended, though radically distinct. They are both shepherds and wanderers, and both occupy parts of Armenia, but the Turcomans speak the Turkish, the Koords the Persian language. The Turcomans are recent wanderers; the Koords are the Gargich, Gogarith, or Kyrti of the ancients, and have occupied their present residence on the waters of the Tigris since the fall of the

phon. The Turcomans give marriage portions with their daughters; the Koords receive a high price from their bridegroom. The Turcomans pay no respect to distinctions of birth; the Koords set a high value on extraction. The Turcomans are not addicted to thieving; the Koords are robbers.

Turénne, town of France, in the department of Corrèze, 16 ms. SSW. of Tulle.

Turin, fortified city of Piedmont, capital of the dominions of the king of Sardinia. It stands in a fertile plain at the confluence of the Doria with the Po. Here is a citadel, deemed the strongest in Europe; and a university, founded in 1405, by Amadœ duke of Savoy. Most of the streets are well built, uniform, straight, and terminate on some agreeable object; the Strada di Po, the finest and largest, leads to the royal palace, and is adorned with piazzas, filled with shops; as are various others of the best streets; all of which are kept clean by means of a canal from the Doria, with sluices that flow through them into the Po. The inhabitants are computed to be 80,000. The citadel is a regular pentagon, and comprehends an extensive and well-furnished arsenal, a canon foundry, a chemical laboratory, &c. There are fine walks on the ramparts and walls of the city; fine gardens on the side of the river Po; and a charming public place called the Corso, where many people assemble in an evening to exhibit themselves and their equipage. Near this city, on the banks of the Po, is the beautiful castle of Valentin, the garden of which is applied to botanical studies. In 1814, it was restored to the king of Sardinia. Turin is 68 ms. • Total area of the Ottoman empire, 811,100

This vast empire may, in general terms, be considered as extending from the northern tropic, in Africa, to the Carpathian mountains in Europe, and in Asia, from the Mediterranean to the Elwend mountains, from W. to E., and from S. to N., from the sands of Arabia to the mountains of Caucasus. A single glance upon a map of the world is sufficient to carry conviction to any mind, that no other empire of the eastern continent ever possessed so pre-eminent a position as that of the Ottoman Turks; and a very slight acquaintance with their history, exhibits an unequalled disregard of every advantage afforded by nature to secure commercial, scientific, and political grandizement. "It is well for them," says Montesquieu, "that God permitted the Turks and Spaniards to exist; the one nation who have most uselessly possessed a great empire." There was, indeed, no material dissimilarity between the various tribes which, for nearly 1000 years successively, poured on Europe and south-western Asia, from the regions of the N. and E. Rude, ferociously warlike, and unacquainted with the arts of civil policy, the Goths, Huns, and Turks were, in the first instance, destroyers. The latter, in the Romano-Greek empire, found no great civilized community to mix with and soften their man-

vers. On the contrary, what little of science remained amongst the Greeks, was lost to the Turks, from religious and political animosity. The Turks are, however, it is probable, as far advanced as were the European nations previous to the promulgation of the art of printing; and the Pachaliks of the Ottoman Empire not worse governed, at this moment, than were the provinces of France, Germany, Poland, and Russia, during the middle ages. This empire has always been rather an assemblage of nations, violently and nominally formed into one state, than a regulated sovereignty united by law and policy. The recent revolt of the Greeks is only one of a series of revolts, almost co-existent with the empire itself; but, in the present condition of Europe, it is very improbable that the wounds of Turkey can be left to heal by the slow operations of nature, as in former instances.

Turks. In the ignorant admixture of nations, religion, and language, too common in our books, Turk and Mahometan are used as synonymous or correlative terms; and, with the same precision, might Christian and French, English, or German, be confounded. The Turks are a Mahometan nation, but they are only one of the many nations who profess that system of religious credence. The Turks, from the best authorities, were a Tartar tribe. The former is, however, more ancient, in our literature, than the latter. The name Turk occurs in Pomponius Mela and in Pliny, whilst it was not until the 12th century that the Tartars became famous in Europe. All the Tartar nations acknowledge the appellation of Turks as belonging to them in common. Those nations called Turks by Abul-Ghazi-Khan, according to that author, contained one sub-tribe, designated Tartars. In the progress of migration and conquest, two great branches of the Turks or Tartars have reached and obtained permanent settlement in Europe. These are the Hungarians and Ottoman Turks.

Though inhabiting, it is probable, from very remote antiquity, the great central slope of Asia, the Turks did not become formidable conquerors, known to European writers, until the middle of the 6th century, though their name had been introduced some centuries previous to that era. In 569, in the reign of Justinian, an embassy from that people reached Constantinople; and in 582 their embassy was returned, and, for the first time, the silks of China reached Europe by the N. side of the Caspian. At that period, the Turks or Tartars were dominant in Central Asia, under the name of the kingdom of Touran. On the SW. they pressed on Persia, and were known as the Turks of Transoxiana, or Turks beyond the Oxus. The white Huns, or Ephthalites, so called by the Persians from *Aptalan*, their name for the Oxus, were also, it is probable, merely the Turks resident on that river. What is generally in our books, called Independent Tartars, was then, by the Turkish nations is still called *Turkmen*, or country of the Turks. Taraz and Otter were successively capitals of Touran or Turkestan. This first Turkish empire gradually declined, but the nation continued numerous, and migrated to the W. Naturally divided by the Caspian sea, this tide of nations was broken. One wave

rolled northwards and thence westward, first ravaged and finally settled in Pannonia, which, under the name of *Ugri*, *Ungri*, or *Isours*, they imposed the name of Hungary. The Hungarians adopted the Christian religion, and, for many ages, were the guards of Europe against their Mahometan countrymen. It is a very singular instance of the mutations of national appellations, that two names so different as Hungarian and Turk should have sprung from the same root.

At the same period in which the Turks, who migrated N. from the Caspian sea, were mingling with the Christian nations of Europe, and were adopting the Christian religion, their brethren, who had passed westward between the Caspian sea and Indian ocean, became the disciples of Mahomet. Their agency produced the most extensive revolutions. The empire of the Khalifs sunk before them. Early in the 11th century, Mahmoud, of Gazna, founded an empire, embracing great part of Indostan and Persia. The empire of the Gaznavides was followed by that of the Seljukian Turks in Persia. This was a most important era in human affairs. In their various revolutions, the Mahometan nations had hitherto made but little impression on the Romano-Greek provinces in Asia Minor; but in 1050, the Turks rushed in a destructive torrent into the Greek provinces. At various subsequent advances and partial regressions, this fierce horde gradually overspread the fine regions of Asia Minor and Greece, and, in 1453, gained possession of Constantinople. Thrace, Bulgaria, Bosnia, Serbia, Wallachia, Moldavia, the Crimea, Greece, and her islands in Europe, became subject to their arms. Most of these provinces they yet retain, and present to the statesman and philosopher, the singular spectacle of a nation of strangers, who, after a residence of 5 centuries, continue hostile aliens in Europe. Suffered to hang a portentous cloud on the borders of Christendom, from the conflicting interests of Christian nations, the Turks remain Asiatics in manners and appearance. Admixed with Caucasian blood, this Tartar race has, in person, the majestic attitude of the European, with the agile movements of their Scythian ancestors. The Turks are generally robust, well-shaped, and of a good mien. They shave their heads, but wear long beards, except those in the seraglio, of palace, and military men, who wear only whiskers. The turban worn by the men is white, and consists of long pieces of the linen made up together in several folds. No one but a Turk must presume to wear a white turban. Their clothes are long and full. They sit, eat, and sleep on the floor, on cushions, mattresses, and carpets. In general, they are very moderate in eating, and their meals are despatched with great haste. Their principal food is rice, and the frugal repast is followed by fruit and cold water, which are succeeded by hot coffee and pipes. With opium they procure what they call a soft or placid intoxication. Chess and *mevâzîr* are favorite games, and the coffee-houses and *mevâzîr* are the chief amusement. Poetry is allowed, and even encouraged, but their verse is properly so called, is no more than *mevâzîr*. The fair sex here are kept under a rigorous

confinement; the Arabic word *Haram*, which signifies a sacred or prohibited thing, is, in its fullest sense, used both of the habitation of the women, and of the women themselves. The Turks believe in one God, and that his great prophet is Mahomet; they appropriate to themselves the name of Moslem, which has been corrupted into Musselman, signifying persons professing the doctrine of Mahomet, which he calls Islam. Drinking wine is prohibited by this prophet in the Koran, yet the Turks make use of it, occasionally, without any scruple; though, instead of it, they generally use sherbet, a liquor made of honey, spices, and the juice of fruits. They expend great sums on fourishes, not only in the towns, but in the country, and other solitary places, for the refreshment of travellers and labourers. They are charitable towards strangers, let their religion be what it will; and no nation suffers adversity with greater patience than they.

The very existence of such an empire as that of the Mahometan Turks, on the verge, and within the reach of the powerful Christian states, may be viewed as a paradox, and so may be considered many of the interior regulations of the Turks. "Nothing," says Hobhouse, "attracts the attention of a traveller in the Levant, more than the consular establishments, which the Turks, so haughty and despotic, so averse to every thing Christian, have long suffered, and still suffer to exist, in almost all the principal towns of their empire. At Smyrna, the Frank town, no inconsiderable place of itself, may be said to be under the complete jurisdiction of the foreign powers. The consuls display the standards of their respective nations; they have their prisons and their soldiers, who wait at their gates, and precede them when they walk or ride; and their houses are sanctuaries which not even the Turk attempts to penetrate."—*Hobhouse*, Vol. II. p. 73.

The first residents under the name of Consuls, or mercantile representatives, were, it is supposed, appointed by the republic of Florence in the time of the first Cosmo de Medices, and called Consules Maritimi, and were permitted to exercise their functions in Turkey, from the pride and independence rather than from any consideration of their utility in the minds of the Turks. It was, however, a fortunate circumstance for the Christian part of the empire that a body of privileged Europeans were admitted, as by that means a communication, though limited in its extent, was preserved with the civilized part of the world. Severe and reserved even to one another, mutual intercourse is very defective in Turkey, but between Mahometans and Christians an association is closed. "A stranger at Constantinople," says Hobhouse, "would naturally wish to live amongst the Turks, as he would amongst the French at Paris, and the Austrians at Vienna; but the difference of manner, customs, and language, render it absolutely impossible to become acquainted in a Mahometan family, or, at a short residence, ever to gain in the very little social intercourse enjoyed amongst the natives themselves."

These obstacles are more numerous and formidable over every other part of the Ottoman

empire, and have left the Turks a barbarous horde of strangers, without the smallest tie of sentiment, kindred, or cultivated association with the European nations; and what renders the situation of this people in a peculiar manner striking, is, that they are ever still more inveterately set apart from their Mahometan than from their Christian neighbours. If their political power was broken, the very nation would seem to vanish from the earth.

The government of Turkey is like the people, foreign to Europe, and undefinable by any general terms used amongst Christians. It may be assumed as a postulate, that in the very nature of man, no actually unlimited despotism can exist. That of the Grand Sultan, though nominally absolute, is in reality restricted by religious institutions, by the indispensable distribution of power, but more than all, in Turkey, by the mental imbecility superinduced by secluded education. The administration of government and justice in that empire, retains all the rude simplicity and consequent anarchy of a nomadic military band. Though twelve centuries have elapsed since their original removal from the central plains of Asia, they have profited little by their contact with civilized nations. The Goths first trampled on, and then adopted, the Roman jurisprudence. The Mandchurians followed a similar routine in China. But the inflexible Turk, surrounded by and actually visited commercially, by the most enlightened and active nations of the earth, remains a Scythian. At this epoch, (1826,) the reigning Sultan is making an active, and hitherto successful effort to suppress the Janisaries. These Pretorian bands, long the terror of Europe and Asia, have degenerated into an insolent, mutinous, and dangerous corps; inefficient against foreign enemies, but ruinous to the state by which they are supported. The Greeks still sustain their revolt. The distant Pashas of Egypt and Bagdat, pay only a nominal obedience to the supreme head. In brief, the whole Ottoman empire exhibits symptoms of decline which portend rapid dissolution.

Tuscaloosa, or *Black Warrior*, the principal branch of Tombigbee; rises in the spurs of Alleghany mountains 20 or 25 ms. S. of the great bend of Tennessee; about 34° N. lat. It is formed by the union of the Big and Little Warrior river, having a general course to the SW. 230 ms. falls into the Tombigbee. The Tuscaloosa is navigable for boats of requisite tonnage, 160 ms. below its mouth.

Tuscaloosa, cy. Al., bounded S. by Perry and Greene; W. by Pickens, N. by Jefferson, and E. by Shelby and Bibb. Length 40 ms., mean width 30; area 1200 sqms. Tuscaloosa river winds across this cy. from N. to S. Chief town, Tuscaloosa. Pop. 1820, 8229. Ctl. lat. see *Tuscaloosa psto*.

Tuscaloosa, pstv. and seat of justice, for Tuscaloosa cy. Al., and seat of government in that state, is situated on the bank of Tuscaloosa river, about 60 ms. above its mouth, 120 SSW. from Huntsville; and 200 a little E. of N. from Mobile. Lat. $33^{\circ} 15'$ N. lon. W. C. $10^{\circ} 37'$ W.

Tuscany, sovereign state of Italy, with the title of a grand duchy, bounded on the N. by Romagna, the Bolognese, the Modenese, and the Parmesan, on the S. by the Mediterranean, on the E. by the duchy of Urbino, the Perugin, the Orvietano, the patrimony of St. Peter, and the duchy of Castro; and on the W. by the Mediterranean, the territory of Lucca, and that of Genoa. It is 150 ms. long, and 100 broad, and watered by several rivers, of which the Arno is the chief. There are several mountains, in which are mines of iron, alum, and vitriol; also quarries of marble, alabaster, and porphyry, besides hot baths and mineral waters. Many parts of it are fruitful in corn, and wine, and produce plenty of citrons, oranges, pomegranates, and other fruits. The inhabitants are distinguished by their attachment to commerce, and have established various manufactures, particularly of silks, stuffs, earthenware, and gilt leather. They are much visited by foreigners, on account of their politeness, and because the Italian language is here spoken in its greatest purity. This duchy is divided into three parts; namely, the Floren-

tino, the Pisano, and the Sienese. It is now an independent duchy governed by an Austrian prince. Pop. 1,180,000. Chief cities, Florence, Leghorn, and Pisa.

Tuscarawas, river, Ohio, rises in Wayne, Medina, Portage and Stark cities, and forming a large navigable creek in the latter, flows SSE. 30 ms., receives Sandy creek from the E., and 12 ms. still lower, Sugar creek, from the W. near New Philadelphia. Below the latter place the Tuscarawas curves gradually SE. and SW., and finally W. flows 50 ms. to its junction with Whitewoman's river at the town of Coshocton. The two rivers at their confluence are nearly of equal size, and are both lost in the general name of the Muskingum. Assuming a southern course of 10 ms., Wills creek enters from the SE., and winding more to the W. 30 ms. farther, receives Licking creek, a large tributary branch, at the town of Zanesville, in Muskingum cy. Here the river is precipitated over its only falls, or rather rapid, 30 or 40 feet entire depression. Below the falls, Muskingum turns to the SE. 80 ms., to its junction with Ohio river at Marietta, in Washington cy.

From this sketch, we find this inland channel lying in nearly a N. and S. direction. Advancing from Cleveland on Lake Erie, up the Cayahoga 40 ms, we reach the Portage, from the stream to the Tuscarawas; thence 10 ms. over that portage, and again down the Tuscarawas and Muskingum 212 ms. to Marietta, exhibits an entire line of 262 ms.

Tuscarawas, cy. Ohio, bounded N. by Stark, E. by Harrison, S. by Harrison and Guernsey, and W. by Coshocton cities. It is 30 by 29 ms. in extent, containing 680 sqms. The principal waters are the Tuscarawas, Sandy, Conchen, Stillwater and Sugar creeks. Chief town, New Philadelphia. Pop. 1820, 8328. Ctl. lat. $40^{\circ} 28'$ N. lon. W. C. $4^{\circ} 30'$ W.

So much has been given on the separate sections, as to preclude the necessity of a lengthened article under the head of the U. S. It may be sufficient to observe, that the territory of the U. S. is naturally subdivided into four sections.

First, the Atlantic slope; second, a part of the basin of St. Lawrence; third, the greatest part of the basin of Mississippi; and fourth, the central part of the basin of Columbia.

The Atlantic slope, is that part of the U. S., from which the streams flow into the Atlantic Ocean. This region extends from Florida point, lat. 25° to the source of St. John's river, lat. 48° N., and reaches inland considerably beyond the main ridge of the Appalachian mountains. It is a very interesting fact in the geography of the U. S., that the real dividing line between the rivers of the Atlantic slope and those flowing into the basins of St. Lawrence and Mississippi, and the range of intermediate mountains, cross each other obliquely. The Tennessee and Kenhawa rivers, rise E. of all the mountain ridges but one; and the Susquehanna and Mohawk, have their sources W. of the Appalachian system. In both cases the rivers pierce the mountain ridges in their progress towards their respective recipients. This peculiar structure gives great facility of water communication across an extensive mountain mass.

Taken into one general view, the Atlantic slope declines gradually, but unequally, from the sources of its rivers towards the Atlantic coast. NE. from the Hudson, this slope terminates by hills on the ocean; but SW. from that river, in an alluvial plain. See the various *States and Rivers of the Atlantic slope*.

Though not the actual dividing ridge between the sources of its rivers, the Alleghany, or Appalachian mountain system, is a very prominent, and influential feature, in the physiognomy of the U. S. It is composed of two very distinct masses, separated by the deep tide vale of the Hudson. NE. from that singular bay, two ridges extend nearly N. and S. First, the main ridge between the basins of the Hudson, and Lake Champlain, and that of Connecticut river; and the second, in more broken fragments E. of the latter basin. One part of the latter ridge, the White mountains of N. H. is the highest part of the system. See *Coas cty.*

From the Hudson, the Appalachian system, with some apparent confusion, extends in two long nearly parallel to each other. There is every where remarkable for the regular height of its ridges, and the non-existence of elevated peaks. The bearing of the whole system, is generally from NE. to SW., but, with some remarkable inflections. In the southern side of Penna. in Md., and in the N. side of Virg., the ridges lie nearly N. and S., but in the latter state, gradually re-assume a SW. direction, and continue in that course to near the N. boundary of Ten. Here the whole system inflects considerably to the W. of SW.,

and crossing Ten., imperceptibly merges into the general level of the adjacent country, in Al., Geo., and Miss.

From the sources of the Mohawk, to those of Tennessee, Kenhawa, and James river, the table land gradually rises, advancing from NE. to SW. The sources of the Mohawk flow from a surface about 600 feet above the Atlantic Ocean; those of the Tennessee, Kenhawa, and James river, from a table land from 1500 to 2000 feet above the ocean level. The intermediate streams rise upon elevations nearly commensurate to their particular distance from the extremes.

The entire Appalachian, or Alleghany system, is about 1200 ms. in length, and including all its lateral ridges 100 ms. wide; embracing an area of 120,000 sqms. But a small part however, comparatively of this superficies is actually covered with mountains. Some of the most productive, picturesque, and salubrious sections of the U. S. are found in the valleys of this mountain system. They are amply noticed in this treatise, under the respective states and cities, within their range, to which the reader is referred.

The reader is also referred for the other great natural sections of the U. S., to the articles *Chippewan, Columbia, Musserne, Mississippi, Missouri, St. Lawrence, &c.*

In estimating the comparative pop. to the sqm., it will be 4 to 3, if the whole territory of the U. S. is included; but amounts to 16 to the sqm., when we include only the area actually embraced by the census of 1820, or about 600,000 sqms.

Several very serious discrepancies exist in the general aggregate published at Washington, from the official return of the census of 1820. In the general summary which precedes the separate tables, the entire pop. of the U. S. is given at 9,625,547; but when the classes in the various columns are numbered from the top to the bottom of the page, or from left to right, a difference in the respective results is found, amounting to 20,187. In searching for the source of this large error, it was discovered that the column headed "Free white males" and under "26" including heads of families, was 746,765, instead of 784,671, the real number. The small fraction of 100, was made up of an error, and the little moment to render specification necessary.

From the very loose manner of taking the

census of 1840, there can be no doubt of a large deficiency in the aggregates. I cannot think it presumption to give the opinion, that the population of the last census, the actual pop. of the U. S. exceeded 10,000,000. The view given of the classified pop. is also extremely deceptive. Only 2,187,143 persons, or about one fourth part of the whole mass, appears to have any employment. To let a real philosophical census, the numerical force of every order in the state ought to be shown. What extensive moral or political use can be made of an enumeration, which sinks into the common body of unemployed persons, doctors, lawyers, teachers, magistrates, physicians, military men, and those who live on the proceeds of realized capital?

In order, however, to render the results of the former enumeration satisfactory, the nature of this treatise will admit, in analysis has been made for each city, and I now enter into some general calculations to illustrate the history of the pop. of the U. S.

Computing the census taken at different times, as they should be periods, I find that a ratio of $\frac{1}{2}$ per cent per annum, corresponds to great exactness with the increment afforded by actual enumeration. I have, therefore, adopted the ratio of $\frac{1}{2}$ from 1790 to 1840, to show the pop. of the U. S. in each year, but in order to be within the limits of convenience, I have used $\frac{1}{5}$ per cent per annum from 1840 to 1850. It will be seen, however, that if we examine the articles of the General Plan, Europe (China, India, &c.) and many others in this treatise that the allowance made for the pop. of the U. S. is too small to be in 1850, according to the estimate in the table, the U. S. territory will not be supplied equal to the general aggregate of many parts of Europe at this epoch. Including the people of Canada, it is probable that, in the beginning of the 20th century, the Anglo-American pop. will approach to, if not exceed, 300,000,000. The following table exhibits, upon the principles of increase I have adopted, the annual pop. to 1850.

It may be observed, that the results of Table III. have no reference to the coloured pop., as respects their condition, whether of freemen, or slaves. The following Table IV. gives the relative Nos. of the white, and coloured classes, in 1790, 1800, 1810, and 1820. The elements are taken from the respective censuses, and very partially, from the results in Table III.

| Date. | 1790 | 1800 | 1810 | 1820 |
|---------------|---------|---------|---------|---------|
| Total, | 3929326 | 5319762 | 7239903 | 9663226 |
| Free, | 3227046 | 4429881 | 6074562 | 8110108 |
| Slaves, | 694280 | 889118 | 1165441 | 1553118 |
| Proportion of | | | | |
| Slaves to | 177 | 167 | 160 | 159 |
| Free, | 1000 | 1000 | 1000 | 1000 |

Taken each as a whole, it is really matter of surprise, that the two classes of people in the U. S., the bond and free, should increase so equally in a given period. By bond, I here mean the entire coloured cast, as from their degraded condition, in the estimation of the whites, the nominally free coloured part of the pop., with but few exceptions, labour under all the worst evils of slavery. In 1810, the free whites were to coloured, as 185 to 1000, and in 1820, as 185 to 1000.

These interesting views might be greatly varied, but the elements once brought together, the reader is enabled to exercise his own inquiry, in such manner as his pursuits may suggest. We now proceed to apply the information series found in Table III., to the present situation location of the aggregate pop. At the epoch of the first census, in 1790, the then inhabited surface, was about 400,000 sqms., with a distributive pop. of 9 to the sqm. In 1820, the organised cities, embraced in the census of that year, covered an area of about 600,000 sqms., with a distributive pop. of 16 to the sqm. nearly. From these facts, we perceive, that the density of population increases much more rapidly, than does the extension of settlement. The territory of the U. S., without including the immense regions on the Pacific Ocean, or that on the higher branches of the Missouri, is divided naturally into two very unequal sections. Watered by rivers flowing into the Atlantic Ocean, and having the sources of those streams, and the Appalachian mountains as its inland boundary, extends the original settlements of the U. S. To this natural section, I have given the name of the Atlantic slope, to distinguish it from the vast basin of the Mississippi. The Atlantic slope, with its extension in Florida, contains in the U. S. about 220,000 sqms. Extending as far westward as the limits of Missouri and Louisiana, having the Canadian Sea N., the Gulf of Mexico S., and the Appalachian system E., spreads an expanse of upwards of 800,000 sqms. These two spaces taken together, it is probable, will contain at all subsequent periods, the far greater part of the pop. of the U. S. The Atlantic slope contains 140,800,000 acres, that part of the great central basin taken into this estimate 512,000,000 of acres. Relative surface is as 11 to 40. The subjoined extracts, show the state, in 1825, of the Public Lands.—By a statement recently laid before Congress, it appears that the total quantity of land sold at the land offices in Ohio, from their institution to the 30th of June, 1825, is 7,602,158.64 acres, and a quantity of land surveyed, and remaining unsold, is 7,630,338.86, making a total of land surveyed in that state of 15,232,497.50 acres.

In Indiana, the total of land surveyed to the same period, is 13,211,095 acres, of which 3,154,432.70 acres have been sold, and 10,056,612.30 remain unsold.

In Illinois, the total of land surveyed, is stated at 21,659,318 acres, of which 1,400,000 acres have been sold, and 20,477,298.16 remain unsold.

In Michigan, the total quantity of land surveyed, to the same period, is 20,281,926 acres,

of which 926,080.93 acres have been sold, and 19,355,845.07 remain unsold.

In Louisiana, the total quantity of land surveyed, is given at 3,518,763 acres, of which 139,861.07 acres have been sold, and 3,478,900.93 remain unsold.

In the territory of Arkansas, the total quantity of land surveyed, between the same periods, is 2,286,846 acres; of which 32,483.56 acres have been sold, and 2,254,362.44 remain unsold.

In Michigan territory, the total quantity surveyed, is 4,532,133 acres, of which 217,902.72 acres have been sold, and 4,284,230.28 remain unsold.

In the states of Alabama and Mississippi, the total quantity of lands surveyed, within the same periods, is 31,399,060 acres; of which 4,609,208.48 acres have been sold, and 26,789,850.52 remain unsold.

In Tennessee, West Florida, 405,783 acres have been surveyed, of which 44,427.55 acres have been sold, and 361,354.45 remain unsold.

The aggregate of public lands surveyed, within the above periods, in all the states and territories, is 119,538,463 acres; of which 17,949,160.49 have been sold, and 101,589,302.51 acres remain unsold.

The U. S. now own upwards of 25,000,000 of acres of surveyed lands, which have not yet been offered for sale, viz:

THE SURVEY DEPARTMENT,
General Land Office, February, 1826.

The actual pop. of the U. S. in 1826, is with in a small fraction of 12,000,000, and without pretending to very great accuracy, we may allow one-third as residents of the interior and larger section. It must be understood, however, that this statement includes the states of Al and Miss., and western N. Y. in the central basin. The density of pop. is in an inverse ratio to surface. The mean existing density of the Atlantic slope is 36 1-3 to the sqm.; that of the central basin only 5 to the sqm. The ratio of increase of the whole mass of the pop. we have found at about 34 per cent. per annum; but if we compare the two great sections with each other, we at once perceive a prodigious inequality. The following tables fully elucidate this truly important subject.

We find that in the last quarter of a century, whilst the entire pop. of the U. S. increased from 5,319,762 to 12,000,000, that that of the central basin augmented from 700,000 to 3,000,000. If we consider the increased means of transportation by roads and canals, it is certainly safe to suppose that the relative increase of the pop. of the two sections will continue to be at least, as great disparity for the next century; but, in order to be within the limits of certainty, I have constructed the following series at a ratio of 5 per cent. per annum.

TABLE VI.

Pop. of the central basin.

| 1846 | 7,959,775 | 1864 | 19,119,344 |
| 1847 | 8,357,760 | 1865 | 20,075,311 |
| 1848 | 8,775,645 | 1866 | 21,022,776 |
| 1849 | 9,194,425 | 1867 | 22,133,039 |
| 1850 | 9,634,145 | 1868 | 23,239,680 |
| 1851 | 10,136,850 | 1869 | 24,401,664 |
| 1852 | 10,644,690 | 1870 | 25,621,747 |
| 1853 | 11,176,874 | 1871 | 26,902,834 |
| 1854 | 11,733,717 | 1872 | 28,247,975 |
| 1855 | 12,324,503 | 1873 | 29,660,373 |
| 1856 | 12,940,738 | 1874 | 31,143,391 |
| 1857 | 13,587,763 | 1875 | 32,700,360 |

By reference to table III. it will be seen that the aggregate pop. of the U. S. for 1870, is estimated at 47,368,544, and comparing that with the same epoch in table VI., it is shown that a period of less than 45 years from the present time, is sufficient to give superior pop. to the central basin. In fact, the ratio used in table VI. is too low. If the march of the emigrating column to the W. is not arrested by unforeseen causes, the preponderance will be in the basin of the Miss. in less than 40 years, or about 1865. And about that epoch, the relative density of pop. will be, on the Atlantic slope, 90 to the sq. mi., and on the central basin 25. If every thing else is considered equal, the capabilities of farther increase after 1865, or 1870, will be as 9 to 2½ in favour of the central basin of N. America over the Atlantic slope; and when each section is peopled in proportion to relative surface, the advantage of the central basin must have an excess, as 80 to 22, or 20 to 11. The inference, if the correctness of these data is admitted, is natural, obvious, and irresistible. The following extract was published in 1825.

No farther back than 1812, when the writer first visited New Orleans, the first steam boat that ever entered the Miss. was plying between that city and Natchez, and no steamboat had ever ascended the river higher than the latter place. At her arrivals and departures from New Orleans, the whole city was agog to see the steamboat. What a wonderful change has been effected in the short space of 13 years!

The following list must continue to increase with the rapidly increasing pop., wealth, and commerce of the W.

Steam boats in the trade on the Ohio and Miss. rivers.

3. Of the Estimate of the Public Revenue, and Expenditure for the year 1823.

The gross amount of duties on imports and
tonnage which accrued from the 1st of Janu-
ary, to the 30th of September last, both days
included, is estimated at \$19,300,000 00, and
that of the whole year at \$23,000,000 00.

It is estimated that the amount of debentures,
issued during the same period, exceeds
the amount issued during the corresponding
period of the year 1821 by 86,000, and that
the amount of debentures outstanding on the
30th of September last, chargeable upon the
revenue of 1823, is \$234,000 more than was
on the same day in 1821, chargeable on the
revenue of 1822.

It is estimated the value of domestic articles
51.

exported from the U. S., in the year ending on the 30th of September last, has amounted to \$42,874,079 00, and that foreign goods exported during the same period, have amounted to \$22,216,202.

As the receipts from the customs in the year 1823 depend, 1st upon the amount of duty bonds which become due within that year, after deducting the expense of collection, and the amount of debentures chargeable upon them; and 2d, upon such portion of the duties secured in the 1st and 2d quarters of that year as are payable within the year; it is manifest that an increase in the amount of debenture chargeable upon the revenue of the year 1823, or a diminution of the importations of foreign merchandise during the two first quarters of that year, must necessarily diminish the receipts into the treasury. As debentures can be issued at any time within twelve months after importation, chargeable upon bonds given for the duties upon such importation, it is impossible to foresee the amount which may be chargeable upon the bonds that are payable during the year 1823. The facts, however which have been stated, justify the conclusion, that the amount of debentures which will be issued and charged upon the revenue of 1823, will considerably exceed the amount which was chargeable upon that of 1822. From the same facts, it is also presumed that the importations of the two first quarters of the year 1823, will be less than the corresponding quarters of the present year.

Giving due weight to all the facts connected with the subject, the receipts of the year 1823, may be estimated at

21,100,000

What a bounty is paid by us to support the agriculturist and manufacturer of other nations, on articles which our country, with a few years of care, might supply! How important it is that the agriculturist should turn his attention to new objects of production, is very fully shown by the circumstance of the diminished and diminishing demand of bread stuffs abroad.

ANNUAL TREASURY REPORT.

Treasury Department, Dec 22, 1825.

Sir: I have the honour to transmit a Report, prepared in obedience to the Act supplementary to the act to establish the Treasury Department."

I have the honour to be, with great respect,
Sir, your obedient servant,

RICHARD ROSS.

The Hon. the SPEAKER

of the House of Representatives.

In obedience to the directions of the act supplementary to the act, entitled "An act to establish the Treasury Department," passed on the 10th of May, 1800, the Secretary of the Treasury has the honour to submit to Congress the following Report:

1. *Of the Public Revenue and Expenditures of the years 1824 and 1825.*—There being no direct taxes, of any kind, duties of excise, or other internal duties, in operation under the authority of the United States, the public revenue, by their existing laws, arises almost entirely from duties upon foreign merchandise imported, and upon tonnage, and from the sale of the public lands. There are other branches, from which small and occasional receipts are derived: as dividends on bank stock, the post office, arrearages of taxes due under former laws, and other incidental payments, the aggregate of which, whether from temporary or permanent sources, is inconsiderable, as will appear by statements annexed to this report, where all are recapitulated. The receipts from the post office, indeed, have of late years exceeded a million of dollars annually, but this sum, exhausted for the most part in defraying the expenses of that extensive and useful establishment, performs in this manner the highest purposes of revenue, by contributing to the intercourse, the trade, and the prosperity of the country.

The nett revenue which accrued from duties on imports and tonnage, during the year 1824, amounted to

The actual receipts in the Treasury, from all sources, during the year 1824, amounted, (including the loan of five millions, at 4 per cent. interest to discharge Florida claims,) to

Viz: \$24,318,212 79

Customs, \$17,878,325 71

Public Lands, 984,418 15

Dividends on Stock in the Bank of the U. S., arrears of internal duties and direct taxes, and incidental receipts,

472,987 04

Repayments of advances made in the War Department for services and supplies, prior to the 1st of July, 1816,

Loan made under the act of the 24th of May, 1824, to provide for the awards of the Com-

missioners under the treaty with Spain,

Balance in the Treasury on the 1st of January, 1824, of

\$9,463,922 81

An aggregate of

\$38,845,134 60

The regular and permanent expenditures of the United States divide themselves into two principal branches: First, the sums authorized by law for defraying the whole expenses of the government, domestic and foreign, civil, military, and naval. 2d. Those provided for the payment of the interest and principal of the public debt.

The actual expenditures of the nation, on all accounts, during the year 1824, amounted to

Viz: \$31,898,538 47

Civil, diplomatic, and miscellaneous, 7,155,308 81

Military service, including fortifications, ordnance, Indian Department, revolutionary and military pensions, arming the militia, and arrearages prior to the 1st of January, 1817,

5,270,254 34

Naval service, including the gradual increase of the navy,

2,904,581 56

Public debt, 10,568,393 76

Leaving a balance in the Treasury, on the 1st of January, 1825 of

\$1,946,597 13

The difference between this balance and that stated in the last Annual Report from the Treasury, is reconciled by the facts, that the balance, last year, was given as an estimated balance, subject to correction by actual settlement afterwards, and that it included the ninety of the loan of five millions, under the act of May the 26th, 1824, which was not paid into the Treasury until after the 1st of January.

The actual receipts into the Treasury during the three first quarters of the year 1825, are estimated to have amounted to

Viz: \$21,681,444 56

Customs, 15,196,397 00

Public Lands, 976,902 67

Dividends on Stock in the Bank of the U. States,

41,758 60

Loan under the act of May 26, 1824,

And the actual receipts into the Treasury during the fourth quarter of the year, are estimated at

And, with the balance in the Treasury on the 31st December, 1824, of

Viz:

Public debt, -

1,028,000 00

Making the total estimated expenditure of the year 1825,

23,443,979 91

And leaving in the Treasury, on the 1st of Jan. 1826, an estimated balance of

\$5,284,061 78

Should the expectations formed respecting the receipts in the fourth quarter be realized, the amount of receipts for the whole year will have exceeded the estimate presented by the Treasury, at the last session of Congress, by about 500,000.

It is to be remarked, that of the above estimated balance of 5,284,061 78, the sum of 3,500,000 is not subject to appropriation, being the estimated amount that will remain, on the 31st of December next, unsatisfied, of appropriations heretofore made. These appropriations being necessary for the objects for which they were severally made, are still an existing charge upon the means of the Treasury. Of the residuary balance of 1,784,061 78, it is proper distinctly to state, that about one million cannot be counted upon in any estimate of effective funds for the public service. It is made up of debts due from various banks, whose notes were received by the government during the suspension of specie payment, or which were heretofore used as banks of deposit; debts, of which the recovery must, in regard to a large part, be doubtful, and, in any case, slow. It may be proper to add, that the permanent deposits generally, made in state banks, have recently been withdrawn, or put in train to be so: the public exigences, which rendered it necessary to make them, in common with those on which the losses above mentioned are likely to occur, no longer existing. Such portions of the deposits as may still remain in any of these institutions, will be further withdrawn, as circumstances may render just and expedient, until the operations are closed; nor will they be recovered where it may be avoidable.

It may be proper, also, to state, that directions have lately been issued to all the receivers and collectors of the public revenue, not to receive in any payments made to them, bank notes of any of the state banks of less amount than five dollars. In discountenancing a species of paper circulation deemed to be objectionable, reference was had to the authority and example of Congress upon this point, as seen in the prohibition to the Bank of the U. States, and the banks existing in the District of Columbia, against issuing notes of a lower denomination. To guard against all inconvenience to individuals, from the adoption of this measure by the Treasury, especially in the districts where the public lands are sold, an adequate previous notice was directed to precede its enforcement.

2. Of the Public Debt.

The total amount of funded debt due on the first of October 1825, was

\$30,985,537 72

Of the above amount, the only portion remaining unpaid, of the Revolutionary debt, is the 3 per cents, amounting to \$12,296,231 45. This sum, and the subscription of \$7,000,000 in the Bank

of the U. S., at 5 per cent. (the U. S. holding an equal amount in the shares of that institution) are redeemable at the pleasure of the government, making together,

\$20,296,231 45

The residue of the public debt, contracted subsequently to the first of January, 1812, and amounting to \$60,689,306 27, exists in the following portions, and is redeemable at the following periods, viz.:

In 1826, being the residue unpaid of loans made in 1813, \$16,270,797 24

In 1827, being the residue unpaid of loans made in 1814, 13,096,542 90

In 1828, being the residue unpaid of loans made in 1815, 9,490,099 19

The stock of the foregoing portions of the debt is all at 6 per cent.

In 1829, stock at 4½ per cent. being the moiety of 6 per cent. stock of 1813, exchanged under the act of Congress of March 3d, 1825,

792,569 44

In 1830, stock at 4½ per cent. being the other moiety exchanged as last above stated,

792,569 44

In 1831, stock at 5 per cent. This is one-third of the sum of \$56,704 77, issued in exchange for the 6 per cents. of 1813, 1814, and 1815, subscribed under the act of the 20th of April, 1822,

18,901 59

In 1832, stock at 5 per cent. being one other third part of the sum subscribed, as last above stated,

18,901 59

In 1832, stock at 4½ per cent. borrowed of the Bank of the U. S., one half to pay the Florida claims; the other half to pay off the 6 per cents. of 1812, under the act of Congress of May 26, 1824,

10,000,000 00

In 1832, stock at 5 per cent., under the Act of Congress of May 15, 1820,

999,999 13

In 1833, stock at 5 per cent., being the remaining third, subscribed under the act of April 20, 1822,

18,901 59

In 1833, stock at 4½ per cent., being one moiety of the amount subscribed in exchange for 6 per cent. stock of 1813, under the act of May 26, 1824,

2,227,363 97

In 1834, stock at 4½ per cent., being the other moiety subscribed as last above stated,

2,227,363 98

In 1835, stock at 5 per cent., being the amount issued under the act of Congress of March 3, 1821,

4,735,296 30

Total, redeemable at the periods specified,

60,689,306 27

Total, redeemable at the pleasure of the government,

20,296,231 45

Total amount of funded debt on the 1st day of October, 1825, \$80,985,537 72
The amount of treasury notes outstanding on the 1st of October, 1825, is estimated at \$16,600.

And the amount of Mississippi stock, unredeemed on that day, including awards not applied for, at \$7,850 17.

The foregoing recapitulation exhibits the precise amount of the public debt now due, as well as the different periods at which, by the terms of the several loans under which it was contracted, the U. S. are at liberty to pay it off.

Of the sum of \$11,074,987 79, mentioned under the head of expenditures for 1825, having been paid off in that year \$7,727,042 19 were on account of principal of the debt, and the remainder on account of interest during the three first quarters of the year. Nearly the whole of the principal, thus paid, was outstanding at an interest of 6 per cent. Looking to the above recapitulation, it appears that, in the years 1826 and 1827, a larger amount of debt becomes redeemable than it will fall within the ordinary surplus means of the government to pay in the course of those years, viz. a sum exceeding \$16,000,000 in the former, and \$13,000,000 in the latter year. Both these portions of the debt are, also, at an interest of 6 per cent. In 1828, the amount redeemable is at a point which, it may be hoped, the stated means of the treasury, for that year, will reach the ability to pay off increasing as the process of reduction advances, both by the increasing means of the nation and the annual liberation of interest on the amount of debt reduced. But, in the year 1829, only a very small amount becomes redeemable, viz.: less than \$1,000,000, and, in the year 1830, a sum no larger.

The debt now issued during the three first quarters of the present year, amounted to \$4,489,710 29. This is more, by \$1,537,710 99, than those issued during the corresponding period of the preceding year. The amount of those outstanding on the 30th of September last, and chargeable upon the revenue of 1826, was \$1,858,315 64, which is more, by \$854,313 64, than was chargeable on the same day, in 1824, upon the revenue of 1825.

The amount of duty bonds in suit on the 30th of September last, was \$2,987,347 22, which is \$92,791 98, more than was in suit on the same day in the year preceding.

Deducing from the foregoing statements the conclusions and probabilities that may at present seem warrantable, the receipts for 1826 are estimated as follow, viz.:

From customs, \$24,000,000 00

From public lands, 1,000,000 00

From bank dividends, 385,000 00

From miscellaneous and incidental receipts, 115,000 00

Making an aggregate of, 25,000,000 00

The expenditures of the year are estimated as follow, viz.:

Civil, miscella-

neous, and diplo-
matic,

2,032,454

Military ser-
vice, including
fortifications,
ordnance, Indian

JOHN McLEARY,

Post-Master General.

General Post-Office Department, Jan. 1, 1825.

N. B. The amount of postages and of compensation to post-masters for the last quarter of 1824, are estimated.

REPORT OF THE POSTMASTER-GENERAL TO THE
PRESIDENT OF THE UNITED STATES.

Post Office Department, Nov. 24, 1825.

As stated in my Report of the 17th Nov., 1823, there was a deficiency of receipts to meet the current expenses of this Department for the three years preceding the 1st April, 1823, of \$202,321 46.

The same Report stated the expenditures as exceeding the receipts, for the year ending on the 1st July, 1823, by \$55,540 39.

The expenditures for the year ending on the 1st July, 1824, amounted to, \$1,169,198 91

There was received for postage during the same time, 1,156,811 56

Which shows a balance of expenditure over the receipts, of \$12,387 35, \$12,387 35

The receipts for the year ending 1st July, 1825, were, \$1,252,061 32

The expenditures were, 1,206,584 42

Leaving a balance of receipts above the expenditures, of \$45,476 90 \$45,476 90

The following will show the increase of receipts for the years specified.

For the year ending 1st July, 1823, the receipts were, \$1,114,343 12

For the year ending 1st July, 1824, 1,156,811 56

Increase of receipts, \$42,466 44

The receipts for the year ending 1st July, 1824, as above, \$1,156,811 56

The receipts for the year ending 1st July, 1825, were, 1,252,061 32

Increase of receipts, \$95,249 76

In making the contracts in the fall of the year 1823, there was a reduction of expenditure, though an increase of mail accommodation was given, of \$47,821 12. This sum may therefore be added to the increased receipts, as it was an augmentation of the means of the Department.

Increase of the year ending 1st July, 1824, \$42,466 44

For do. ending 1st July, 1825, 95,249 76

Reduction of expenditure, 47,821 12

Showing an improvement in the pecuniary affairs of the Department, for the year ending 1st July, 1825, compared with the year ending 1st July, 1823, of \$185,537 32, \$185,537 32

Since my Report of the 30th Nov., 1824, contracts have been made for an additional transportation of the mail, of 1,030,703 ms. annually. 613,024 ms. of this transportation will be effected in stages; the residue on horse-back or in sulkeys.

This service has been contracted for at an expense of \$58,012 42. As almost the whole of this expense has been incurred since the 1st July last, but a small part of it appears in the expenditures for the year ending on that day.

In my last Report, the increased transportation of the mail since the 1st July, 1823, up to that time, was stated at 495,718 ms. 874 27 ms. of this distance, the mail is conveyed in stages.

The increase of the transportation of the mail since the 1st July, 1823, amounts to 1,030,703 ms. annually; a distance nearly equal to one-sixth of its annual transportation throughout the Union previous to that time; and only falling short about 200,000 ms. per annum of its entire conveyance in the year 1797.

Such has been the accession of receipts for postage, that the additional expenditures required by this extension of the mail, will be met without difficulty; and, if Congress should think proper to relieve the treasury from any charge on account of this Department, the usual appropriations may be drawn from its own funds.

Since the 1st July, 1823, there have been established one thousand and forty Post Offices, a greater number than existed in the Union in the year 1801.

Suits have been commenced on the balances standing against late Postmasters, before the 1st July, 1823, where there existed any probability of collecting the whole or any part of the principal or his surties.

It was stated in the report of the 17th November, 1823, that there was due to the Department from Postmasters, late Postmasters, and Contractors, on the 1st July, 1823, three hundred and ninety-one thousand nine hundred and ninety-four dollars and fifty-nine cents. And in the same report, it was estimated, that not more than two hundred and fifty thousand dollars of this sum could be collected. The progress that has since been made, in adjusting these balances, goes to confirm the accuracy of this estimate.

The amount therefore due to the Department, on the 1st July last, the greater part of which must be realized from the old balances by the sale of property on execution, may be stated at \$250,000 00

To this sum should be added the excess of receipts over the expenditures, for the year ending the 1st of July, 1825, after deducting therefrom \$12,387 35, the deficiency of receipts to meet the expenditures for the previous year 33,089 35

Making the total sum of \$283,089 35

A law was passed at the last session of Congress, authorizing the Postmaster General under certain restrictions, to discontinue any route which shall have been in operation three years, and the receipts of which do not equal one-fourth of the expenses; and this provision does not take effect until three years after the passage of the act, it affords no immediate re-

lie from the expenditure of money on unproductive routes.

With the exception of some routes, which connect important districts of country, the expenditure ought always to bear a just proportion to the receipts. No fairer criterion of the inequality of a route can be afforded, than its failure to pay a reasonable proportion of the expense.

On some routes, the mail bag is often carried when it does not contain a single letter or newspaper, and where this is not the case, the expense of transporting the mail on many routes is from ten to twenty times greater than the receipts. Both the justice and policy of such expenditures may well be questioned. The discontinuance of unproductive routes, which afford little or no accommodation, would save from forty to fifty thousand dollars annually. This sum, judiciously appropriated, would be much public accommodation, and would be the means of increasing the receipts of the department.

Some losses of money, transmitted in the mail, have occurred within the past year, but it is believed that the sums have been smaller, and the instances more rare, than have taken place, within the same period, for many years. And it is a fact, important to be known, that for eighteen months past, very few depredations upon the mail have escaped detection.

By permitting the large portmanteaus to be opened only at the important offices, and having them secured by locks different from those used on the way bags, greater safety has been given to the mail.

In the operations of this Department, there are between fifteen and twenty thousand agents employed. That these should all act with the promptitude and precision of a well-disciplined military corps is not to be expected; but it is believed that, with some exceptions, they exhibit an energy and attention in the discharge of their multifarious duties, creditable to themselves and advantageous to the public. The quarterly returns of Postmasters are now made with great punctuality, and they seldom fail to pay the drafts of the Department.

Fortifications according to the plan of 1821.

[The following Document is selected from those which accompanied the report of the Secretary of War to the President, and by him transmitted to Congress, as presenting, in a condensed shape, a complete view of the works reported to be necessary to complete our system of fortifications upon the present plan.]

REMARK. The classification in this table, distinguishing three periods, exhibits the works enumerated in the order of their necessity to meet the earliest possible emergency.

The following Historical, and Geographical view of the Forts, and system of fortification in the United States, is extracted from a speech of Mr. Dickerson of N. J. in Senate, May 9th, 1826. *Vide Nat. Intell. May 16th, 1826.* The whole speech is highly worthy of attentive perusal.

By the plan of 1821, the proposed fortifications, in addition to those previously erected for the defence of our maritime frontier, are divided into three classes, to be erected at three different periods, as the country may be able to

bear the expense. Those of the first class to cost eight millions ten thousand and fifty-four dollars—to require, for garrisons in time of war, 20,305 men, and in time of peace, 2,540. The second class to cost \$4,711,031, to require 8,615 men, in time of war, and 1,030 in peace. The third class to cost \$5,073,970, and to require 9,042 men in war, and 1,120 in peace. To cost, in all, \$17,795,055—say \$18,000,000. to require in war, 37,962—say 38,000 men; and in peace 4,690—say 5,000. By a report accompanying the President's message, of the 6th December last, we find estimates of additional works for defence of Boston Harbour and Narragansett Bay—for rafts to obstruct the channel between forts Monroe and Calhoun—Fort at Craney Island—Fort at New Port News—Fort at Naseway Shoal—Fort at Thomas's Point, and Fort at Point Patience, not included in the estimates of 1821, to the amount of nearly two millions of dollars. So that this scheme of forts, of 1821, as enlarged by the additions of 1823, is to cost nearly twenty millions of dollars, by the estimates submitted, which are several millions of dollars under what will be the real cost of these works; and this does not include the Forts Fayette and Washington, completed since the late war, nor a great variety of forts erected previously to, and during the late war—as Fort George, Fort Preble, Fort Constitution, Fort Sewell, Fort Independence, Fort Warren, Fort Wolcott, Fort Adams, Fort Trumbull, Fort Columbus, Fort Lewis, Fort Wood, Fort Mifflin, Fort McHenry, Fort Severn, Fort Pike, Fort Niagara, Fort Shelby, Fort Wayne, Fort Gratiot, Fort Howard, Fort Dearborn, Fort Harrison, Fort Nelson, Fort Norfolk, Fort Johnson, S. C., Fort Johnson, N. C., Fort Moultrie, Fort Scott, Fort Montgomery, Fort Crawford, (Al.) Fort Charlotte, Fort Hampton, Fort Osage, Fort Clarke, Fort Edwards, Fort Armstrong, and Fort Crawford, at Prairie du Chien. These forts are of so much importance, that in the year 1817 they were all military stations; commanded by the different officers of our army, as appears by a report accompanying the President's message, of the 23d December, of that year. At that time 4,460 men were stationed at those forts. Many of them will no doubt be finally abandoned, but many of them must be repaired and garrisoned, to give any thing like uniformity to the system, and will cost us several millions of dollars.

Accuracy, as to the expense of works of such magnitude, could not be expected. A man who builds knows that the estimates run much below the actual cost. It is no matter of surprise that our engineers have been able to make their estimates with as near an approach to accuracy as they have; and yet I do not doubt those estimates will be found, in the average, twenty-five per cent. below what these fortifications will cost.

In the estimate of 1821, Old Point

Comfort, now Fortress Monroe, was to cost \$816,814

By an estimate, accompanying the

President's message, of 4th of

March, 1824, this fortress was to cost \$1,357,792

A difference of \$540,978 in this one work,

which no doubt will be much increased before the work is completed.

The fort at the Annapolis, by estimate of 1821, to cost,

By that of 1824,

A difference of fifty thousand dollars.

The fort at Chef Menteur, by estimate, of 1821,

By estimate of 1824,

A difference of forty thousand dollars.

The fort at Pea Patch, by the estimate of 1821, to cost

By estimate in the President's message of 6th December last,

A difference of \$211,567; about 81 per cent.

The history of the fort at this place, of Fort Delaware, may lead us to form some of what we may expect from other forts, by the time they are completed. Fort Delaware was originally, in the first place, to be built upon a very high point, to mount 213 guns; this plan was afterwards much reduced; and by the estimate of 1821, the whole expense of constructing the fort was fixed at \$252,000. The work was then so far advanced, that no more than \$25,000 were asked to complete the same; and Congress, by act of 3d of March, 1821, appropriated this sum for Fort Delaware, and very wisely inserted in the law, that it was to complete the fort. On the 7th May, 1822, however, to make it a little more complete, Congress voted a further appropriation of \$20,000 for Fort Delaware. On the 3d March, 1823, they voted no further sum of \$58,000 for this fort.

By a message of the President of the 4th March, 1824, it is stated that Fort Delaware was begun in 1817; that up to 30th September, 1823, it had cost \$369,473; and that there was wanting to complete the same, \$10,236, in all \$379,709.

In 1824, it was discovered that Fort Delaware was so badly built, that its walls would fall, without the help of an enemy. To satisfy the public, Major Babcock, under whose superintendence the work was constructed, has been tried by a court martial, but not found guilty of any criminal neglect or ignorance.

On the 2d of March, 1826, a further appropriation is made for this fortification, of \$71,679,600.

By the President's message, of 6th December last, it appears that Fort Delaware had cost up to the 30th September, 1825, \$469,772 54, and that there would be wanted to finish the same, \$37,895 20. In all \$469,767 74; which is 81 per cent. above the estimate of 1821; how much more will be wanted, we are not yet informed.

All these circumstances and miscalculations, can be explained satisfactorily, nor are they stated to throw any censure upon the Engineer Department, but to show that this system of fortifications, is to cost much more than would appear, by the estimates submitted to us. At the Pea Patch, we proposed to build fortifications on the opposite side, to cost \$347,000; as by estimate of 1821, it was also calculated that the fort at the Annapolis, which was built upon a high point, Delaware, was to cost \$252,000. Two other forts, at Fort Delaware, were now good landing on

the Jersey side, at Elsenburg—and on the Delaware side, at Fort Penn. And if these are defended, there are other points not far below, where an enemy may land in both states.

The expenditures for fortifications from 1794 to 1814, twenty years, amounted to \$1,415,405.

Since that time, the following appropriations have been made for fortifications.

| | |
|--|--------------|
| 1814, March 10th. | \$500,000 |
| 1815, March 3d. | 400,000 |
| 1815, December 21st. | 200,000 |
| 1816, April 29th. | 838,000 |
| 1817, March 3d. | 838,000 |
| 1818, February 15th. | 500,000 |
| 1820, April 14th. | 800,000 |
| 1821, March 3d. | 200,000 |
| 1822, May 7th. | 320,000 |
| 1823, March 3d. | 215,000 |
| 1824, April 29th. | 500,000 |
| 1825, March 2d. | 821,372 |
| The estimate for 1821, amounted to | 17,795,055 |
| Money expended up to 30th December, 1825, upon the forts of the estimate of 1821, | 3,605,000 |
| To be expended under future appropriations, | 14,190,055 |
| To which add for works contained in the statement of 6th December, 1825, not included in the estimate of 1821, | 1,953,067 |
| | 16,143,123 |
| | \$27,185,500 |

If we add to this, a proper allowance for under-estimates on the fortifications still to be finished—for lines on contracts—for the guns and armaments for all these forts—and if we make allowance for the forts not mentioned in the estimates of 1821, but which must be rebuilt, or repaired, our whole system of fortification, will stand us in a sum not less than forty millions of dollars.

The men required for the forts mentioned in the plan of 1821, were in time of war 37,962, in peace 4,690. For the forts of Washington and Fayette, mentioned in the plan of 1821, 1600 men in time of war and 200 in time of peace. For the forts mentioned in the estimate of 6th December, 1825, and not contained in the plan of 1821, 2000 men in war and 250 in peace. To these, add the requisite number for garrisons of forts, that were occupied in 1817, most of which must again be occupied, if we make our system of fortification rest upon our present magnitude. It is well known that 50,000 men are required for our fortifications in time of war, and 10,000 in peace. We have but few forts on our maritime frontier, and but few are mentioned where they will be wanted. The men required for the garrisons in time of peace, must

be added to our present standing army, as soon as our new forts shall be ready for their reception.

The forts built, and to be built, for the protection of New York, are besides those at Throgs Neck and Wilkin's Point—

| Fort at New Utrecht Point, to cost | \$124,995 |
| Fort Tompkins, | 483,988 |
| Fort on Middle Ground, | 1,681,411 |

In order to enable the reader to make his own comparisons, I have closed the article U. S., with the following Table. The document claims a high authority from its source, though, perhaps, rather too moderate in its aggregate results. See art. *America*.

POPULATION OF AMERICA.

In the copious Appendix to the third quarter volume of *Humboldt and Bonpland's Travels*, which was issued last year at Paris, the annexed tables are furnished. They refer to the year 1823, and comprise information as valuable as it is compendious. Having been framed upon the best principles and authorities, they may be supposed to have the highest degree of truth, which is generally attainable in such estimates. According to Humboldt, the whole surface of the West Indian Archipelago con-

lands about 8200 square leagues, (of twenty to the degree,) of which the four great islands of Cuba, Hayti, Jamaica, and Porto Rico, occupy 200, or about nine-tenths.

Usbeck Tartars, a grand division of the vast Turkish race, possess a large region of Western Asia, forming once the kingdoms of Bukharia, Khoarezm, and Fergana. The Usbecks are generally short and stout men, with broad foreheads, high cheek-bones, thin beards, small eyes, clear and ruddy complexions, and generally black hair. They speak the Zagatayan language. Religion Mahometan. Government despotic.

Usbeck Tartary, kingdom of Asia, inhabited by the Usbecks. The limits of this naturally fine country are indefinite, but generally considered as limited on the N. by Asiatic Russia, E. by the Beloor mountains; S. by Afghanistan; SW., by Persia; and W. by the Caspian Sea. Usbeck Tartary is a very diversified country. The eastern part is mountainous, the northern and western level, and in part sandy plains, but the central regions watered by the numerous branches of the Oxus and Iaxartes, are in a peculiar manner fertile, well watered and salubrious, and when inhabited by a civilized race of men equal to any portion of the eastern continent. The country peculiarly called Usbeck Tartary, is the southern part of what is usually called Tartary. Cl. lat. 40° N. Chief cities, Bukharia, Samarcand, Khiva, and Badakshan. The government a pure and unqualified despotism. Pop. in the aggregate, uncertain; in detail, the country is thinly peopled, and 5,000,000 would probably be too large an estimate.

Venezuela, province of Colombia, bounded on the N. by the Caribbean sea, on the E. by Caraccas, on the S. by New Granada, and on the W. by St. Martha. When the Spaniards landed here in 1499, they observed some huts built upon piles, in an Indian village, in order to raise them above the stagnated water that covered the plain, and this induced them to give it the name of Venezuela, or little Venice. Near the seacoast are high mountains, the tops of which are barren, but the lower parts in the valley are fertile, producing plenty of corn, rich pastures, sugar, tobacco, and fruits. There are also plantations of cocoa nuts, which are exceedingly good; and gold is found in the sands of rivers.

Venezuela, or *Coro*, capital of the province of the same name, in Colombia, seated on a peninsula, on the Gulf of Venezuela, 70 ms. NE. of Maracaybo. Lon. $70^{\circ} 15'$ W. lat. $10^{\circ} 43'$ N.

Venice, late celebrated republic of Italy, which comprehended the Dogado, Paduano, Vicentino, Veronese, Bresciano, Bergamo, Cremonese, Polesinod, Rovigo, Trevisano, Feltrino, Bellunese, Cadornio, and part of Friuli and Istria. The Venetian territories on the continent, enumerated above, (and which, by way of distinction, are sometimes called the Terra Firma,) are described in their respective places. This once powerful state, since 1814, has formed one of the great sections of Austrian Italy; area 9950 sqms. Pop. 1,930,000.

Venice, city of Italy, one of the most celebrated in the world, and capital of a republic of the same name, with a patriarchate, and a university. It stands on 72 little islands, in the Gulf of Venice. The approach to the city is marked by rows of stakes on each side, which direct vessels of a certain burden, to avoid the shallows. These shallows are a better defence than the strongest fortifications. Venice is included in the province called the Dogado, and is 72 ms. E. by N. of Mantua, 115 NE. of Florence, 140 E. of Milan, 212 N. of Rome, and 300 N. by W. of Naples. Lon. $12^{\circ} 10'$ E. lat. $45^{\circ} 26'$ N. The trade, opulence, and pop. of Venice are still respectable. The inhabitants amount to about 140,000.

Venice, Gulf of, sea between Italy and part of Turkey in Europe. It is the ancient Adriaticum Mare, and is still sometimes called the Adriatic. It extends from SE. to NW. between

Italy, to the SW., and Albania, Herzogowina, Dalmatia, and Illyria NE., reaching from latitude 40° to 46° N.

Vera Cruz, formerly an Intendancy, now a State of the republic of Mexico. It is a long narrow slip extending on the Gulf of Mexico, 450 ms. with a mean width inland, 30 ms.; area 27,000 sqms. lying between N. lat. 17° and $22^{\circ} 20'$; lon. W. C. $17^{\circ} 5'$ to 22° W. In all its great line of the coast, not one really good harbour exists. Vera Cruz itself is a mere roadstead. There are few, if any other, regions of the world where transition of soil, elevation, and vegetable life are more rapid and striking. The western part rises on the declivity of Anahuac, and one day the traveller ascends from the fertile plains near the Mexican gulf, to the region of perpetual snow. Ascending from the city of Vera Cruz to the table land of Perote, we see the physiognomy of the country, the aspect of the sky, the form of plants, the figure of animals, the manners of the inhabitants, and the modes of cultivation assume a different aspect at every step. Sugar, vanilla, cocoa, tobacco, cotton, sugar, and rice. This intendancy, contains the two great volcanic summits of Orizaba, and Cofre de Perote. In it, near Papantla, are found very well preserved remains of ancient monuments. See *Pyramids of Mexico*. Its cities are Vera Cruz, Xalapa, Perote, Cordoba, Orizaba, and Tlaxiotalpan. It is drained by the Sumasinta, Guasacualco, Alvarado, and some streams of lesser consequence.

Vera Cruz, city of Mexico, and capital of the state of the same name. This city, beautiful and wealthy from art, owes nothing to nature. It stands on the low, sandy, and insalubrious coast of the Gulf of Mexico. The harbour, if it ought to be so called, is in some measure protected by the small island of St. Jean d'Uda, but in reality very insecure. The winter population of Vera Cruz is about 17,000, but in summer the yellow fever drives the wealthy to Xalapa, and other places of the interior. Arid sands environ this city, which depends on foreign commerce for its subsistence. Lat. $19^{\circ} 11'$ N. lon. W. C. 17° W.

Vera Paz, province of Guatemala; bounded on the N. by Yucatan, E. by the bay and pro-

vince of Honduras, S. by Guatemala proper, and W. by Chiapa. It is full of mountains and forests; but there are many fertile valleys, which feed a great number of horses and mules. There are also many towns and villages of the native Americans. The capital, of the same name, or Coban, is a bishop's see, but is inconsiderable. It is 120 ms. N.E. of Guatemala. Lon. 90° 55' W. lat. 15° 30' N.

Verguá, province of Colombia, on the isthmus of Darien: bounded on the N. by the Caribbean Sea, E. by the province and bay of Panama, S. by the Pacific Ocean, and W. by Costa Rica. It is 125 ms. long and 40 broad, and is a mountainous and barren country, but abounds in gold and silver. St. Jago is the capital.

Verberie, town of France, in the department of Oise, on the river Oise, 10 ms. N.E. of Senlis.

Vercelli, city of Piedmont, capital of a lordship of the same name, and a bishop's see. The inhabitants are estimated at 20,000. It is seated at the conflux of the Cerna with the Sesia, 40 ms. N.E. of Turin. Lon. 8° 24' E. lat. 45° 51' N.

Vermillion, C. H. and pst. Vermillion cty. Ill. about 120 ms. NE. from Vandalia, and 100 a little N. of W. from Indianapolis, in Ind.

Vermillion, river of Lou., rises 3 ms. NW. from the town of St. Landré, in Opelousas, by Bayou Bouffée. After continuing to flow to the S. a little E. 12 ms. an interlocking stream, the Fassillier, unites the Vermillion and Teche, forming the limit between Opelousas and Attacapas, at that place. The Vermillion continues through St. Martin's, the upper parish of Attacapas, in nearly a S. direction 60 ms., having an entire course of a little more than 70 ms. The arable lands along the Vermillion are extremely fertile, and as the stream flows S. of lat. 30°, sugar can be cultivated on its banks; considerable forests cloth the banks of the Vermillion near the limits of Opelousas and Attacapas; but in proceeding towards the sea, trees gradually diminish, and near the bay except a few clumps of cypress, live oak, &c. the prairie or sea marsh extends on all sides. The tide rises in the Vermillion 15 or 20 ms., but the bar at the mouth only admits vessels drawing 4 or 5 feet water.

Vermillion and *Côte Blanche Bays*, Lou., are only parts of the same sheet of water, indented by point Cyprière Mort, and limited on the

by a chain of low marshy islands. The depth of water over the two bays is 10 or 12 feet, though no vessel drawing more than 5 feet can enter. The coast along the shores is low and marshy, except the two small elevated spots of Côté Blanche and Grand Côte. Small clumps of trees are scattered along the lagunes, but the general surface is a grassy marsh.

The grand or western pass into Vermillion Bay, is the main outlet of Vermillion river, and is about one mile wide and three long. Morrison's Cut, or eastern pass, is merely a strait between two small islands, each pass having about 5 feet water.

Lying between lat. 42° 44' and 45° N. A chain of high mountains, running N. and S., divides the state nearly in the centre, between the river Connecticut and lake Champlain. The natural growth upon this chain is hemlock, pine, spruce, and other evergreens; hence they are called the Green Mountains, and give name to the state. The country is generally hilly but not rocky, and the soil is fertile. It has numerous streams and rivers, which all rise in the Green Mountains, the largest are on the W. side, and the chief are Otter creek, Onion river, La Moelle, and Mischiscou; the most numerous are on the E. side, and the largest are West river, White river, and Passumpsic.

Vesuvius, celebrated volcano of Italy, 6 ms. E. of Naples. This mountain has two tops; one of which only goes by the name of Vesuvius, the other being now called Somma; but Sir William Hamilton is of opinion, that the latter is what the ancients called Vesuvius. The perpendicular height of Vesuvius is only 3700 feet, though the ascent from the foot to the top is 3 Italian ms. One side of the mountain is well cultivated and fertile, producing great plenty of vines; but the S. and W. sides are entirely covered with cluders and ashes; while a sulphureous smoke constantly issues from the top, sometimes attended with the most violent explosion of stones, the emission of great streams of lava, and all the other attendants of a most formidable volcano. The top of the mountain fell in 1634, and the mouth is now little short of 2 ms. in circumference.

Vienna, city of Germany, capital of Austria. It stands in a fertile plain, on the right bank of the Danube, at the influx of the Danube river. The city itself is not of great extent, nor can it be enlarged, being limited by fortifications, but it is populous, and contains 200,000 inhabitants. The streets in general are narrow, and the houses high; but there are several fine squares, and in that called Joseph square is a colossal equestrian statue in bronze, of Joseph II. Some of the public buildings are magnificent; the chief of them are the imperial palace, the palaces of the princes, Lichtenstein, Eugene, &c. the imperial chancery, the extensive imperial arsenal, the city-arsenal, the mint, the general hospital, the town-house, the custom-house, the bank, the library, and the museum. No houses within the walls are allowed to be built nearer to the glacis than 600 yards; so that there is a circular field of that breadth all round the city, which has a beautiful and salutary effect. The eight suburbs are said to contain 220,000 inhabitants; but they are not populous in proportion to their size, for many houses have extensive gardens. The circum-

ference of the city and suburbs is upwards of 18 ms. Many families who live during the winter within the fortifications spend the summer in the suburbs. The cathedral is built of freestone, and the steeple contains a bell of uncommon magnitude. The cathedral, now imperial library, is much frequented by foreigners, as it contains above 290,000 printed books, and 10,000 manuscripts. The cathedral treasury and a cabinet of curiosities of the bones of Austrian emperors are situated here. The Danube is here very wide, and some of the islands, one of which is the site of an imperial park, it also forms a sort of arsenal, where are magazines of naval stores, and ships have been fitted out to serve on the river against the Turks. The trade of Vienna is a considerable state, and it has manufactures of silk, wool, and silver lace, besides bookbinding. It is 50 ms. W. of Presburg, 350 N. of Constantinople, and 570 E. of Lima. Lon. 16° 16' 22" E. lat. 48° 12' N.

From its great extent, and from being so much intersected by mountains, Virg. presents

a very marked diversity of soil and climate. It possesses the main southern nucleus of the Appalachian system, spreading also into the widest base, upon which that system rests. See *Article United States, section mountains*.

In point of soil Virg. like Md., presents three distinct tracts. The first, that of the alluvial sea sand island to the falls of the rivers, and generally to the head of tide water. This region is flat and in part marshy along the sea coast, but rising imperceptibly inland, into the second or hilly tract. The latter again merges gradually into the third or mountain section. The subjoined tables will exhibit the relative density of pop. on the respective sections. The middle section of Virg. is remarkable for its rich scenery, and generally for good soil, and the production of excellent grain. The narrow zone between the Blue Ridge and Alleghany mountain, is generally considered as the most productive region of Virg.

In order to give the reader means of estimating correctly the present locality of pop. in Virg., the cities in the respective zones as far as their outlines would admit, are given separately.

No. III.—The surface of West Virg. is still more broken than that of West Penn. In one respect the two sections are equal; the air and water of both are pure and healthful. Strenuous exertions are making by the legislature and people of Virg., to open an uninterrupted water communication from Jame's river to the Great Kenhawa, and down that stream to the Ohio. Should such an undertaking be carried into effect, and nature appears to have opposed no obstacle insuperable to genius, wealth, and industry to remove; then will a new and most important commercial line be added, to connect and cement the two opposing slopes of the Ohio river and Atlantic Ocean.

Politically, West Virginia is subdivided into the cities, of:

| Counties, - | Sq. Miles. | Pop. | To Sq. |
|--------------------|------------|-------|--------|
| Broke, - - - - - | 150 | 6,811 | 44 |
| Cabell, - - - - - | 1,750 | 4,789 | 21 |

The entire pop. of West Virginia were classed by the census, 1820,
 Foreigners not naturalized, - - - - - 139
 Engaged in Agriculture, - - - - - 34,314
 Do. in Manufactures, - - - - - 3,878
 Do. in Commerce, - - - - - 343

Total, - - - - - 39,314

We perceive by the foregoing table, that a very scattered pop. of a little more than 5 to the sqm. spreads over a surface, in West Virg., of 28,130 sqms. This includes also the two extremes, and comparatively thickly populated cities, of Brooke and Ohio, W. from Penn.; the two Monongalias, on Monongahela river, S. from Penn.; and Washington on the waters of Tennessee. The superficies and pop. of these cities, are, if taken together, 2100 sqms., and 39,297 inhabitants; leaving for the residue 26,030 sqms., and 107,817 inhabitants. This presents a surface, in West Virg., exceeding 26,000 sqms., upon which there exists a pop. of within a trifling fraction of 4 persons to the sqm.

| Summary. | Sq. Miles. | Population. | To Sqm. |
|----------------------------|------------|-------------|---------|
| East Virginia, - - - - - | 8,875 | 262,524 | 30 |
| Middle Virginia, - - - - - | 24,297 | 555,266 | 23 |
| West Virginia, - - - - - | 28,130 | 147,514 | 5 |

Total, - - - - - 61,302 1,065,304

We here behold the interesting results, that although the large towns of Richmond, Petersburg and Lynchburg, are all included in the middle section, and though comparatively inferior in soil; that the alluvial portion of Virg., contains the most dense pop. of any of the great sections of that State.

The following table exhibits the entire population at the respective census of 1810 and 1820.

| Population in 1810. | |
|-----------------------------|---------|
| Free white males, - - - - - | 280,038 |
| Do. do. females, - - - - - | 271,496 |

Progressive population:

| | |
|----------|---------|
| In 1790, | 747,601 |
| 1800, | 886,149 |

In 1810, and in 1820, as in the preceding table.

In the alluvial and middle counties enumerated in sections No. I. and II. there were by the census of 1820, free whites, 452,930, and slaves and free coloured persons 424,370.

In the counties of West Virginia, there were by the census of 1820, 6728 male, and 6568 female slaves, amounting to 13,296. There were free persons of colour, 551 males, 487 females, amounting to 1038. The slaves and free persons of colour united, making an aggregate of 13,296, and leaving free whites 132,790.

The interests of education have received ample consideration from the legislature of Virginia. The university of Virginia has been located at Charlottesville, but has not yet went into operation. The most ancient college of that state, William and Mary, is at Williamsburg. See *Williamsburg*. Washington college at Lexington. See *Lexington*. Hampden Sydney college stands in Prince Edward county. See *Prince Edward*.

The funds appropriated by the legislature of Virginia, for literary purposes, are about 1,200,000 dollars, received from the U. S. for military services, and other sums arising from cshcheats, fines, &c. The whole estimated to yield annually 90,000 dollars. Of which, about one half is appropriated to primary schools; and 15,000 dollars to the state university. The residue remains unappropriated.

The actual commercial relations of Virginia may be seen by reference to the articles Alexandria, Norfolk, Petersburg, and Richmond, its four principal ports. The most valuable staples of the state are wheat and tobacco, but a considerable quantity of cotton is cultivated in the SE. coies. Small grain, fruit, and pasturage

abounds, where due attention has been paid to agriculture. Iron, lead, gypsum, salt, and mineral coal, are its most valuable and abundant metallic productions.

Vistula, large river which rises in Mount Crapach, on the confines of Silesia and Hungary, crosses Poland and Prussia, and falls by three mouths into the Baltic, below Dantzie. It is formed by the Vistula proper, the Bug, and Narew, and passes, Cracow, Sandomir, Warsaw, Culm, Marienberg, and Dantzie. The Vistula is a very important river in the general commercial connexion of Europe; its basin, 400 by 180, extends over 72,000 sq. ms. Canals of considerable magnitude unite the Vistula with the basins of the Dnieper and Oder. That of Thorn joins the Warta to the Vistula; and that of Pinsk unites the Bug and Prypce. The Vistula is navigable from Austrian Galicia, to the Baltic at Dantzig, nearly 400 ms. Its branch, the Bug, nearly 400 ms. and as much by the Naran. By these the produce of Poland, passes down to Dantzie in sloops and flat-bottomed barges, of from 30 to 60 tons. Below Marienwerder, the river divides into various channels. That to the NW., passes Dantzie, and enters the Baltic at Weichelmunde by an artificial cut. The main body enters the Friche Haff, by which the inland navigation is prolonged to Königsberg on the Pregel. The delta of the Vistula as high as Marienwerder, is an embanked country.

Volga, largest river in Europe, which has its source in two small lakes, in the government of Plezkof, in Russia, about 80 ms. W. of Iver. It begins to be navigable a few ms. above that town, and is considerably augmented here by the junction of the Tverza, which is a broader, deeper, and more rapid river. By means of the Tverza, a communication is made between the Volga and the Neva, or, in other words, between the Caspian and the Baltic. This river waters some of the finest provinces in the Russian empire, passes by Yaroslaf, Kostroma, Nisnel-Novogorod, Kamen, Simbirsk, and Saratof, entering the Caspian Sea, by several mouths, below Astracan. The Volga is formed by two immense branches, the Volga proper, flowing from the W. and the Kama from the E. These two great streams unite at lat. $55^{\circ} 10'$ N. lon. 50° E. from London. Below their junction, the united waters assume a general course a little W. of S. 800 ms. to the Caspian. Estimating by comparative courses, and following the Volga proper, the entire length is about 1600 ms.; by the Kama, 1300 ms. Below Saratof, the Volga receives no branches of any consequence, in a distance of 190 ms. Rejecting, therefore, this prolongation, the basin of this fine river is in length from the Ural mountains to the sources of the Oka, 1100 ms. and in breadth from N. to S. 500 ms. Area 550,000 sqms. or about the one sixth part of all Europe. This stream taken in extenso, includes the most expanded uninterrupted navigable basin on the eastern continent, and is, in nearly all its parts, exempt from falls, or even rapids. On the northern side the Valdai hills separate the basin of the Volga from the great slope inclining towards the Baltic and White seas.

Through the Valdai hills, three passes have been examined for canal effect. One to the SW., by the Emsta, lake Ilmen and river Volchoff, the fall to the gulf of Finland is about 570 feet, and to the Caspian about 890 feet. The 2d route is by the lake Ladoga, and rivers Sassa, and Pissa; the fall towards the Gulf of Finland, is about 920 feet, and into the Caspian 1240. The 3d or NE. route, is the

lowest depression between the Caspian and Baltic seas. It rises from the latter, by the river Neva, lake Ladoga, river Swire, lake Onega, and the river Whitegra, about 460 feet, and falls in the opposite direction 780 feet. For the cause of the different descents towards the Caspian and Baltic seas, see the art. *Caspian*. Through the southwestern route a navigable canal has been in operation above a century.

Washington City, capital of the U. S., and of the D. C. The following description is from the pen of Mr. John Seaford, and extracted from the National Intelligencer.

Washington City, in the District of Columbia, the metropolis of the U. S. is situated on the left bank of the Potomac, and the right bank of the Anacostia, in lat. 38° 54' lon. 0°, being intended for a cast meridian. The Tyber runs through the middle of the city, and may be conveyed to the high ground on which the Capitol stands; and the water of the Tyber and the Reedy Branch, may be conveyed to the Capitol, and the president's house, the avenues, and such streets as lead immediately to public places, are from 130 to 160 feet wide, divided into footways, and walks of trees, and carriage ways; the others are of various widths, from 70 to 110 feet; the avenues and streets of 100 feet and upwards, have footways of 20 feet wide; those under 100 and over 80, have footways 17 feet wide; and under 80 feet, 12 feet footways. The ground on which the city stands, was ceded by the state of Md. to the U. S. in full sovereignty, and the proprietors of the soil, surrendered their lands to be laid out as a city, gave up one half to the U. S. and subjected other parts to be sold to raise money as a donation to be employed, and constitute a fund for the public buildings.

The buildings belonging to the United States, are,

1. The Capitol, a large and massy building of the Corinthian order, of freestone, composed of a central edifice, and two wings; the whole front of the building is about 360 feet; the wings were nearly completed, when the British army, under general Ross, (who was afterwards slain in a battle near Baltimore,) in August, 1814, made a sudden incursion, gained possession of the city, setting fire to the Capitol, president's house, public offices, &c. not connected with the operations of war, reducing the whole to ashes, together with a valuable and extensive library belonging to Congress; the wings are rebuilt, and the centre nearly completed. The foundation of the north wing was laid in the presence of president Washington, on the 16th of Sept. 1793, and that of the centre on the 24th of August 1813, being the anniversary of its destruction by the British.

2. The president's house, built of freestone, two stories high, of the Ionic order, and covered with copper, and distant from the Capitol, about one mile and a half.

3. Four buildings, erected in a line E. and W. of the president's house, for the accommodation of the principal departments of government, and subordinate offices; the whole are of brick, two stories high, with freestone basements, and covered with slate; the two new ones are handsome edifices, with freestone porticos on the N. front, in the Ionic order.

4. The general post office, where the patent office is also kept, is a large and handsome building, three stories high, and 120 feet in length, is situated on high ground, about equidistant from the Capitol and the president's house.

5. A very extensive navy yard, completely enclosed with a lofty brick wall, with a handsome gate-way, with guard-rooms; a neat dwell-

ling for the commandant, and others for different officers of the yard; extensive warehouses, shop for blacksmiths, coopers, turners, plumbers, painters, &c. sail lofts, model rooms, timber sheds, a steam-engine which works two saws, drives a tilt hammer, and the turners' lathes. The Columbus 74, and the Potomac 44, were built at this yard; and there is a large frigate now on the stocks. The Potomac has been toulled up on Commodore Rodgers' inclined plane, erected as a substitute for a dry dock. Within the enclosure is a neat marble monument, erected by the American officers, to the memory of their brethren who fell before Tripoli, in the year 1801; this monument was mutilated by the British on the 25th of August, 1814. In this yard are deposited vast quantities of naval stores, and cannon of every size, and is superior to any thing of the kind in the U. S.

6. A comfortable marine barrack, sufficient for 1500 men, well enclosed, having a handsome parade, and a neat and commodious residence, for the commandant of the corps, and good houses for the subaltern officers, an armory, and shops for the repair of arms, &c.

7. A substantial navy magazine, with a house for the keeper.

8. A fort at the extreme southern point of land in the city, commands the channel of the Potomac, and the eastern branch; the improvements at this place are extensive and substantial; with store houses, an armory, shops in which are made gun carriages, fixed ammunition, &c. with an extensive open space, belonging to the garden.

The capitol square is enclosed by a strong and handsome iron railing, and in part planted with trees and shrubbery, and will, in a short time, afford a delightful promenade. Similar improvements are making at the president's house and public offices.

There is a fine bridge about one mile long, over the Potomac, built in 1809, leading to Alexandria, and two over the eastern branch. Of turnpikes, there is one to Alexandria, one to intersect the Little river turnpike to Virginia, another to Baltimore, completed, and one now opening to Montgomery court-house. A canal passes through the city, connecting the waters of the eastern branch with the Potomac. The eastern branch has a sufficient depth of water for frigates to ascend to the navy-yard without lightening, and vessels drawing 14 feet water come up to the Potomac bridge, near to which are three good wharves, and from thence to the mouth of the Tiber, there is 10 feet at high tide. There are four market-houses, in each of which markets are held tri-weekly. The city contains a large infirmary, a female orphan asylum, a jail, a neat and commodious new theatre, a circus, and two masquerade balls, a city hall, commenced in August, 1820, the south half of which is built and enclosed; it presents a front of 251 feet, erected from the proceeds of a lottery, authorized by Congress, three buildings for public schools, two of which are on the Lancasterian plan, supported by the corporation, and open for all poor children; thirteen places of public worship, viz. two for Episcopalians, three Presbyterian, two Catho-

lic, two Methodist, two Baptist, one Unitarian, and a Friends' Meeting; which are generally well attended. There are also a city library, Medical, Botanical, Clerk's, Benevolent, Masonic, Orphan, Bible, Dorcas, Missionary, and Tract Societies, Columbian Institute, and other institutions. Education is not overlooked, as is evinced by the numerous academies and schools which are established. Besides the Columbian college, adjoining the city, there is a large Catholic theological seminary in the city, connected with which is a school for the general education of youth.

An extensive window glass manufactory, which supplies the market, and exports to a considerable amount; five very extensive taverns, with accommodations equal to any of a similar nature; three banks, a branch of the U. S. bank; a fire insurance company, nine printing offices, two daily papers, two tri-weekly, and two weekly. A steam-boat runs regularly to Aquia creek, one to Alexandria, and another from Norfolk, to the city. Five stages depart daily to Baltimore, and several others to other places.

The seat of government was removed here in the year 1800, during the presidency of John Adams.

The city was incorporated by an act of Congress, passed on the third of May, 1802, by which act, the appointment of the mayor, was vested in the president, yearly; and the two branches of the council, elected by the people, in a general ticket. In a supplementary act, passed May 4, 1812, the corporation was made to consist of a mayor, a board of aldermen, and a board of common council; the board of aldermen to consist of eight members, elected for two years, two to be residents of, and chosen from each ward; the board of common council to consist of twelve, three from each ward; the mayor, by the joint ballot of the two boards, to serve for one year. By a new charter, granted by congress on the 15th May, 1820, it is provided that the mayor shall be elected by the people, to serve two years, from the second Monday in June; the board of aldermen to consist of two members from each ward, elected for two years, and are ex-officio justices of the peace for the whole county; the board of common council to consist of three members from each ward, to serve one year; and every free white male citizen of the U. S., of lawful age, having resided in the city one year previous to the election, being a resident of the ward in which he offers to vote, and shall have been assessed on the books of the corporation for the year ending on the 31st day of December preceding the election, and shall have paid all taxes legally assessed and due on personal property, when legally required to pay the same, shall be entitled to vote at any election for a mayor, or members of the two boards.

The city is by an act of the council, divided into six wards. The number of inhabitants were at different periods, as follows, ascertained by the official enumeration, viz:

| | |
|----------|-------|
| In 1800, | 3,210 |
| 1803, | 4,352 |
| 1807, | 5,652 |
| 1810, | 5,208 |

1817, 11,299
1820, 13,247

The number of dwellings, exclusive of public buildings and shops, was, on the 1st of January 1822, 2229, of which, 1035 were brick, and 1194 wood; and the assessed valuation and real and personal property, on the 1st of January, 1821, was \$6,568,726, affording a revenue of \$12,842 63; in addition to which there is a revenue of \$10,000, arising from the licences of taverns, hackney coaches, &c. which is appropriated to the support of the poor, of public schools, and markets, and to pay the officers of the corporation.

The classified population of Washington is exhibited in the following table.

The following matter was published in one of the public prints of Philadelphia, December 20th, 1822, as a communication from the editor of this gazetteer, to the editor of that print. It is here subjoined to the article, W. City, as it may give some aid to the future disquisition on the question by which it was produced; that is, the occupation of the mouth of the Columbia river, by a colony from the U. S.

Washington is situated at lat. 38° 54' N. and 77° W. from London.

The mouth of Columbia is situated at lat. 46° 15' N. and within a trifling fraction of 48° W. from W. C. 125° from London.

The difference of lat. therefore, is 21' and difference of lon. 48°.

By a calculation on Mercator's plan, the two places bear from each other N. 78° 15' W. and S. 78° 15' E. distant in geographical ms. 2162, and in English ms 2436.

From W. city to St. Louis, by Pittsburg and the Ohio and Mississippi rivers, 1396 ms.

From St. Louis to the mouth of Columbia, by the Missouri and Columbia rivers, 3543 ms.

Entire distance from Washington to the mouth of the Columbia, 4944 ms.

The distance from St. Louis to Washington, by Shawanctown and Knoxville, 1029 ms.

Ily Lexington in Kentucky, 1005 ms.

By Vincennes, Cincinnati, and Pittsburg, 1011 ms.

St. Louis is 38° 36' N. lat, 92° 58' W. Mouth of Columbia, 46° 15' N. lat. 47° 57' W. lon. These two places bear from each other at an angle from the meridian 73° 28', are consequently 73° 28' NW. and 73° 28' SE. respectively distant; 1714° geographical, and 1831 English ms.

The several distances, as given by Messrs. Lewis and Clark, are no doubt over calculated; their aggregate distance exceeds the direct line almost two to one, an excess hardly credible. In most instances, where the lengths of rivers have been estimated by persons ascending their currents, the space passed through has been overrated, and the error has in most instances borne some proportion to the violence of the stream.

Washington, NW. city of the D. C. bounded SE. by the city of Washington and Georgetown, SW. by Potomac river, W. and N. by Md. and E. by East Branch, or Anacostia river. It approaches to the form of a right angled triangle, 7 ms. base, by 6 perpendicular, and with an area of 21 sqms. Surface hilly, and soil of middling quality. Pop. 1820, 2729. Washington Hollow, *pslv.* Dutchess *cty.* N. Y., on Wappingers creek, 12 ms. NE. from Poughkeepsie.

Washington point, cape formed by the two

branches of Elizabeth river, about 1 mile above Norfolk, Virg. Herceing U. S. has a marine hospital

Washitau, or **Ouachitau**, N.E. parish of Lou.; bounded by the Mississippi river NE., the parish of Concordia and Ouatahoula SE., Rapides S., Natchitoches W., and the territory of Arkansas W. Length 85, mean width 50 ms.; area 4000 sqms. That part W. from Washitau river, is hilly, with a sterile soil covered with pine timber. A similar characteristic is continued E. of that stream in the northern section of the parish, to within 10 or 12 ms. from Mississippi river; E. from Washitau river, and in the S. and SE. part of the parish, except along the margins of the streams, the surface is liable to annual submersion. The only arable land of considerable extent is found along the Washitau, Bartherry, Bayou Siard, and the rivers Bon Idée, and Boëuf. There are, however, distant from the water courses, two small, but very productive prairies, Mer Rouge, and Jefferson. Except those, and a few other small prairies, the whole not amounting to 25 sqms., the whole parish of Washitau in a state of nature, was covered with a very heavy forest; pine W. and NW., and a mixed mass S., SE. and E. The arable river alluvion very productive. Staples, cotton and lumber. Pop. 1820, 2896. Cil. lat. 32° 35' N. lon. W. C. 15° W.

Washitau, river of Arkansas and Lou., E. NE. branch of Red river. This stream rises by three large branches between Arkansas and Red river, about 15° W. from Washington, and at lat. 34° 30' N. It thence flows nearly E., the three branches uniting above the Hot Springs. Opposite the latter place the Ouachitau turns S., enters Lou. at lat. 33° N., and continuing in that direction to lat. 31° 39' N., where it receives the Tensas from the SE., and Ouatahoula from the NW., and takes the name of Black river. See *Black river*, *Ouatahoula*, and *Tensas*. The Ouachitau is navigable during spring floods as high as the Hot Springs, and except in very dry seasons, at all times to the upper settlements in Lou. Below the springs it is augmented from the W. by the Cado fork, Little Missouri, Saluter, and Derbane, and from the E. by the Saline, Barthelony, and Boëuf rivers.

Wassana, city of Africa, on the Niger, lying according to the best information, at lat. 11° N. and lon. 17° E. from London. This is probably the same place mentioned by Ptolemy under the name of Gano, and marked on the various maps of Africa as Gano, Gana, Wangara, and Gogara.

Wassenburg, town of Germany, in Westphalia.

Wasserburg, town of Germany, in the circle of Bavaria, with a castle. Lon. 12° 13' E. lat. 48° 4' N.

Watauga, SE. branch of Holston river, rises in Ashe cty. N. C., flows into Ten., and joins Holston in Washington cty. Ten.

Watchet, town of Eng. in Somersetshire, on the Bristol Channel, at the mouth of a good harbour, much frequented by coal ships, which are freighted hence with limestone and various other articles. It is 14 ms. NW. of Bridgewater, and 153 W. by S. of London. Lon. 3° 25' W. lat. 51° 12' N.

Watecoo, island in the South Sea, discovered by captain Cook. It is about 6 leagues in circuit, is a beautiful spot with a surface covered with verdure, and composed of hills and plains. From every circumstance, it may be considered as indubitable, that the inhabitants of Watecoo derive their descent from the same stock which has so remarkably diffused itself over the immense extent of the Southern Ocean. Lon. 158° 15' W. lat. 21° 1' S.

Waterborough, pst. York cty. Maine, on the NE. side of the river Mousin, 15 ms. NW. of Kennebunk, 41 N. by E. of Portsmouth in N. H., and 47 W. of Portland. Pop. 1820, 1762.

Waterbury, pst. on Onion river, Washington cty. Ver., 12 ms. NW. from Montpelier.

White Mountains, the highest part of a ridge of mountains, in N. H., in N. America. They extend NE. and SW. to a length not yet ascertained. The height of these mountains above

an adjacent meadow, is reckoned from observations made in 1784, to be 3600 feet; and the meadow is 3500 feet above the level of the sea. The snow and ice cover them 9 or 10 months in the year, during which time they exhibit that bright appearance from which they are denominated the White Mountains. Although they are 70 ms. within land, they are seen many leagues off at sea, and appear like an exceedingly bright cloud in the horizon. Their highest summit is in lat. 44° N.

White River, psto. Lawrence cty. Ark., 125 ms. from Little Rock.

White River, Ind., is the great south-eastern branch of Wabash. It is formed by two branches, both rising about lat. 40° N. and lon. W. C. 8° W., and near the W. boundary of the state of Ohio. Flowing by a general course SW. about 70 ms., the two branches unite, and continuing below their junction 30 ms., joins the Wabash, between Knox and Gibson cties., at lat. 38° 27' N. The valley of White river is a real curiosity in the hydrography of the U. S. The extreme eastern sources of Croghan's Fork, rise within one mile from the bank of Ohio river, opposite Gallatin cty. Kent. A ridge of hills winds at no great distance from its banks, and nearly parallel to the Ohio, from the Great Miami to the Wabash. The north-western streams of this ridge are discharged into either the White river or Wabash. The valley of White river is in form of an ellipsis, 180 ms. long, with a mean width of 60, embracing an area of 10,800 sqms., and comprising about one third part of the state of Ind. There are but few, if any, equal sections of the U. S., exceeding in natural advantages this tract. In fertility of soil, and mildness of climate, it is a really desirable region. The streams without falls, are, except in seasons of drought, navigable almost to their sources.

White River, river of Ark. and Miss., rises in the southern part of the latter, and northern part of the former, by two large branches, White river proper or NW. branch, and Black river, or NE. branch. Both these rivers are navigable in seasons of high water, far above their junction. They unite in Ark. N. lat. 35° 30', and the united streams flow thence nearly S. by comparative courses about 120 ms., falls into Mississippi river 30 ms. above the mouth of Arkansas. White river is at all seasons navigable below the mouth of Black river. The entire length of this stream following either branch, is by comparative courses, about 350 miles.

Wilkes-Barre, pstr. borough, and seat of justice, Luzerne cty., Penna., stands upon a level plain on the eastern bank of the Susquehanna river. It was laid out about the year 1775, by Colonel John Durkee, from whom it received its name, in compliment to Wilkes and Barré, two celebrated members of the British Parliament favourable to the American cause during the revolution. The streets are laid out at right angles, having a square of about four acres in the centre of the plot, the sides of which form an angle of 45° with the streets, so that the four principal streets enter the public square at its corner. The public buildings are within the square. From the main street, a bridge crosses Susquehanna, connecting Wilkes-Barre and Wyoming, or Kingston. Pop. of the former about 300. Lat. 41° 13' N. lon. W. C. 1° 7' E. 120 ms. N. N. W. from Philadelphia, and by pstrd. 117 NE. from Harrisburg.

Wilkes-Barre, valley of, commonly called the valley of Wyoming, is a real natural curiosity. The Susquehanna river enters the Appalachian system of mountains at Towanda, by breaking the western chain. Pursuing a S.E. course of 50 ms. from Towanda, the great volume of waters in its rocky bed rolls through several chains in rapid succession, and finally enters the Wyoming valley, by a very narrow mountain pass, above the mouth of Lackawannock creek. Here the river turns at right angles, and flows S.W. 70 ms. to where the two great branches unite between Northumberland and Sunbury. The particular valley of Wyoming is a continuation of that of Lackawannock, and commences about 25 ms. NE. from Wilkes-Barre, extending 7 or 8 ms. S.W. of that village. It is therefore, something above 32 ms. long, with a mean width of 24. After winding down this vale 9 ms. the Susquehanna, passing Wilkes-Barre, and below the village 6 ms. again breaks through the same ridge by which it entered. The latter pass, or gap has been evidently first formed, and gradually lowered by abrasion. Above and below Wilkes-Barre, extensive alluvial flats, of different elevations extend, having every appearance of once forming the bottom of standing water. Wilkes-Barre itself stands on one of these alluvial plains, 18 or 20 feet above the ordinary level of the adjacent stream. The plains indeed, here, as every where else, along the upper Susquehanna, though differing in elevation, are generally in two stages. The lower, and more recent, is still exposed to occasional submersion, and is composed of soil but little admixed with rounded pebble. The second stage, is elevated above any rise that can now take place of the waters of the Susquehanna, and is formed by a congeries of rounded and amorphous stones and sand.

From these plains the mountains rise abruptly, though very seldom in precipices, and are

mostly clothed with timber to their summits. Bald peaks, and precipices, though not frequent, do, however, present themselves, and give variety to this truly picturesque region.

Appalachian scenery every where richly deserving more attention than it has received, presents in the Wyoming valley an assemblage of natural beauties that cannot be viewed without the most intense interest. Here all one *coup-de-oeil*, are combined, the river winding its fine volume through meadows and fields, alluvial plains relieved by swells of all forms, and on all sides mountains raising their broken, and steep sides to the clouds.

The mineral wealth of this mountain valley is as remarkable as its natural attractions. Iron and mineral coal abound. The formation is secondary, the rocks inclining to the S.E. The species of coal Anthracite, lies imbedded in inclined strata, from two or three, to 20 feet in thickness, and no doubt but very imperfectly and partially explored.

Wilkesboro, or *Wilkesville*, pstr. and seat of justice Wilkes cty. N. C., on the Upper Yadkin river, 30 ms. N. from Lincolnton, and by pstrd. 204 ms. NW. by W. from Raleigh. Lat. 36° 7' N. lon. W. C. 3° 12' W.

Woolthorpe, a village of Eng., in Lincolnshire, about 6 ms. S. of Grantham, and about 12 E. from Melton Mowbray. In this obscure village, not marked on the map of Eng. published in Rees' Cyclopedia, on December 25th, 1642, was born Isaac Newton. The birth place of this ornament of human nature, was indeed rather a manor house, than a village, his father, John Newton, was lord of the Manor of Woolthorpe.

Newton procured the first rudiments of his education at Grantham school, and on June 5th, 1660, was admitted into Trinity College, Cambridge, in his 18th year. The mind of Newton

must have received an early and unconquerable bias for analytical mathematics, which led him to neglect the ancient geometry. This neglect was, subsequently, severely regretted by himself. In 1664, he procured a prism, and with its aid made such discoveries in optics as almost to have first raised that subject to the rank of a science. In 1666, Newton was elected a Fellow of Trinity College, and in the same year took his degree of Master of Arts. On the 11th, of January 1672, the Royal Society did itself the honor to enrol the name of Newton as one of its members.

Dr. Brewster, in his eagerness to do honor to Newton, ascribes to him the discovery of the first and second laws of Kepler. The propositions containing those laws had been in print before Newton was born; this illustrious English astronomer demonstrated their principles, but it is barefaced imposition to make him their discoverer. According to Brewster himself in the Art. Astron. p. 560, Kepler's Rudolphine tables were published in 1626, and states expressly, that these tables were founded on the true laws of planetary motion; that the planets moved in elliptic orbits with the sun in one of the foci, and that the Radius Vector described equal areas in equal portions of time.

In 1687, Newton's Principia were published by the Royal Society, under the inspection of Dr. Halley, and placed the name of its author amongst the greatest of those who have contributed to exalt human nature.

In 1699, he was made Warden of the Mint; and on the resignation of John lord Somers, President of the Royal Society, Nov. 30th, 1703. Both these offices he held until his death. Many of his important works were published after the Principia, but rather involved him in controversy than added to his fame. The evening of the life of Newton was not so tranquil as is too commonly supposed, nor did his own temper always remain unmoved by attack or contradiction, though he attained the great age of 84 years and some months: he died March 20th, 1727. With great inconsistent pageantry, his remains were laid in Westminster Abbey. His fame demanded a more dignified and less showy mausoleum. His name alone would have been the most sublime of all epitaphs:

Yellow water, river which rises in Alabama, runs nearly S. into Florida, falls into Pensacola bay, after a course of about 70 ms. It is a fine, clear, and beautiful stream, rising in pine woods.

Yenisei, or *Jenisa*, river of Siberia, which running from S. to N. enters the Frozen Ocean, to the E. of the bay of Oby. The Yenisei is a river of the first class, rising on the vast Plateau of Asia. It is composed of three great branches, the Yenisei proper, Upper Tongouska, and Lower Tongouska. The former by the name of Sziszka, rises about lat. 50° N. pierces the Altai, and flowing northwardly joins the Upper Tongouska at lat. 57° N. The Upper Tongouska, is in reality the main stream; its higher source the Selenga rises in the country of the Kalkas Mongols, N. lat. 49°. Composed of numerous branches, and taking the name of Selenga, this elevated river falls into the Aral

Sea; from which it is again precipitated in the Angara. Augmented by innumerable smaller streams, and changing its name to Tongouska, this main arm of the Yenisei reaches above N. lat. 60°, where it abruptly turns SW. 300 ms. and receives from the S. near Kemak, the Yenisei proper. This now immense volume rolls northwardly to above lat. 60°, where it receives from the SE. Lower Tongouska, and inclining to NNW. the Yenisei at lat. 66°, is finally augmented by its last great tributary the Ingouska. Crossing the Arctic Circle, and advancing into the regions of perpetual frost, this great river reaches lat. 72° N., after a comparative course, from the sources of the Selenga of 2100 ms. Without estimating the solitary prolongation below the Ingouska, the basin of the Yenisei is 1400 ms. long, with a mean width of 600 ms., area 840,000 sqms. This basin is again remarkable for its great difference of level. It is probable, that the country of the Kalkas Mongols, is at least 5000 feet above the level of the ocean. See *Tartary*, *Mongolia*, *Siberia*, &c.

York, city of Eng., the capital of Yorkshire. It is the Eboracum of the Romans, and many of their coffins, urns, coins, &c. have been found here. It has always been considered as the capital of the North, and in point of rank, as the second city in the kingdom. York is 70 ms. S. by E. of Durham, and 198 N. by W. of London. Lon. 1° 14' W. lat. 53° 59' N.

York, city, of Eng., double in size to any of the other; bounded on the N. by Durham and Westmoreland, on the E. by the German Ocean,

on the W. by Westmoreland and Lancashire, and on the S. by the R. of Chester, Derby, Nottingham and Lincoln. Its most remarkable natural inland boundaries are the river Tees to the N., the ridge of hills called the English Appennines to the W., and the arm of the sea named the Humber to the SW. This city is 100 ms. in length, and above 80 in breadth. From its great extent it has been distributed into three main divisions, called Ridings. The sea-coast, except the southern part of it, is in general naked and dreary, consisting of wide extended moors and barren hills. This city is extremely well watered, and its rivers are disposed in a singularly beautiful manner. They rise, in general, in the mountainous skirts of the city, from the NE. round to the SW.; and, uniting as they proceed towards its centre, like the veins of a spreading leaf at length terminate in one main trunk, which issues in the Humber. The principal branches are the Ouse, Don, Derwent, Calder, Aire, Warf, Nidd, Ure, and Hull, all which terminate in the Humber, which falls into the German Ocean between Yorkshire and Lincolnshire. Pop. in 1801, 858,892, in 1811, 973,113, and in 1821, 1,175,241.

Youghiogany, river of Penn. and Md., rises in the extreme south-western angle of Md., between the sources of Potomac and Cheat rivers. Pursuing a northern course over Md. into Penn., and augmented by Castelman's river, its northern branch, the Youghiogany, turns to NW., and breaking through Chesnut Ridge and Laurel Hill, joins the Monongahela at McKeesport, 18 ms. above Pittsburgh. This is a fine mountain stream, which in all seasons, except in periods of long drought, contains more than sufficient water for a supply of the most capacious canal; general comparative course, about 100 ms., 30 in Md. and 70 in Penn. The Youghiogany heads with the Cheat branch of Monongahela, with the N. branch of Potomac, and by Castelman's river, with Juniata and Kiskiminitas. Should the Chesapeake and Ohio Canal be seriously undertaken, the channel of the Youghiogany, from relative position, presents the most direct route to unite the waters of the Potomac with those of Monongahela.

Yucatan, peninsula and state of Mexico, designated the Intendancy of Merida, under the Vice Royalty. Yucatan is bounded by the Gulf of Mexico NW. and N., by the Caribbean sea E., by Central America S., and by Chiapa and Tabasco SW. Length from SW. to NE., 500 ms., mean width 160; and area 80,000 sqms. "The peninsula of Yucatan," says Humboldt, "of which the northern coast, from Cape Catoche, to the Punta de Piedras, 240 ms., is a vast plain, intersected in its interior by a chain of hills of little elevation." Though one of the

warmest, Yucatan is amongst the most healthy regions of equinoctial America. It reaches from lat. 15° 40' to 21° 30' N. This salubrity is no doubt, owing to the dryness of the soil and atmosphere. Along the whole coast from Cape Catoche to the mouth of the river San Francisco, in a distance of 400 ms., the country does not afford a single spring of fresh water, that element is however, abundant in the interior. Chief towns, Merida de Yucatan, Campeche, and Valladolid de Yucatan. Pop. 700,000.

ADDENDA.

Oceanica, a term introduced into geography by Malte Brun, to designate those interminable regions S. and SE. from Asia. "The Chinese Sea separates Asia from the great ocean, as the Mediterranean separates Africa from Europe. To the W. we continue the boundary line through the Straits of Malacca, and then turning round the N. point of Sumatra, we proceed to the point where the 92d meridian E. from London crosses the equator. Through the whole southern hemisphere that meridian will form a convenient division between the seas of New Holland, and those of Madagascar and Africa. The islands of Amsterdam and St. Paul will, on this principle, remain connected with the Archipelago of the Indian Ocean. When we leave the Chinese Sea, to the N., the channel between Formosa and the Philippines being the broadest, marks the natural boundary. From this we draw a line which, following that part of the waters most free of islands, separates the Japanese seas to a distance of 300 or 400 ms., and reaches the point of intersection of the 40th parallel of N. lat., with the 150d meridian. The 40th parallel will continue to bound the new division of the world, till we come to the point where it is crossed by the 158th western meridian from London. Taking our departure from this point, we separate the North American seas from those of the Oceanic Archipelago, by the shortest line that can be drawn from this point of intersection of the 108th western meridian and the equator. This meridian will be our boundary through the southern hemisphere." *Malte Brun*, Lib. III. Part I.

Oceanica contains the *Terra Australis Incognita*, of early geography, and now comprises the Archipelago of the East Indies, Austral Asia, and Polynesia, and in respect to mere outline is the most extensive grand division of the earth. When discovered by Europeans, two very distinct races of men were found to inhabit Oceanica; these were the Malay race in Polynesia, or eastern Oceanica, and the Austral Asian Negro, of New Holland, Van Diemen's Land, New Caledonia, the New He-

brides, New Britain and Solomon's islands, as well as New Guinea or Papua: though in the savage state of society the Malays were found very far advanced in the arts of life above the Papuans. See *New Holland, Papua, Polynesia, &c.*

Prairie, *Savannah*, *Steppe* and *Steppe* *Llanos* and *Pampas*, are terms frequently found in this Dictionary, and mean essentially the same object, viz. a country grassy and unwooded. The word prairie, is French, and is the superlative of *pré*, a meadow. The term prairie has a very extensive application in North America, as has *steppe* in Asia. The following extract from Tooke's *Russia*, London Edition, vol. i. p. 74, will serve to show the minute resemblance between the North American, and Asiatic plains in Siberia. "Steppes of Asia. The term does not properly denote low and watery places; or meadows, but dry, elevated, extensive, and for the most part uninhabited plains, some of them being destitute of wood and water, are therefore uninhabitable; others have shrubs growing on them, and are watered by streams, at least have springs or wells, though they are void of inhabitants."

The same author proceeds to state, that the soil of the steppes, vary from the most productive alluvion to an arid sand admixed with common salt (*saltrate of soda*) and broken by rocks. This, if they are taken in their full extent, is the character also, of the prairies of North America. The prairie or steppe differs only from the deserts of Arabia, and Africa, in the circumstance of having more fertility of soil. The nomadic or wandering pastoral tribes of northern and central Asia, and on the steppe a scanty herbage, which is wanting on the deserts. The *llanos* and *pampas* of South America, are prairies or steppes, and present similar variety of soil. In South America, however, those grassy regions possess more fertility in general, than any similar parts of either North America, or Asia. The common name attached to either the prairie or steppe, is that they are undeviating plains; but this appellation is erroneous, as on both continents there is great diversity of surface, and soil.
